The arrangement of headings has been sometimes modified to secure a mnemonic aid in numbering and finding books without the index. For instance, the scheme is so arranged that China has always the number 1. In Ancient History, it has the first section, 931: in Modern History, under Asia, it has 951: in Philology, the Chinese language appears as 491. After the same manner the Indian number is 4; Egyptian, 2; English, 2; German, 3; French, 4; Italian, 5; Spanish, 6; European, 4; Asian, 5; African, 6; North American, 7; South American, 8; and so for all the divisions by languages or countries. The Italian, 5, for instance, will be noticed in 35, 55, 450, 755, 850, and 945. This mnemonic principle is specially prominent in Philology and Literature and their divisions, and in the form distinctions used in the first 9 sections of each class. Materials, Methods, or Theory occurring anywhere as a head, bears always the number 1. Dictionaries and Cyclopædias, 3; Essays, 4; Periodicals, 5; Associations, Institutions, and Societies, 6; Education, 7; Collections, 9. In the numerous cases where several minor heads have been grouped together under the head Other, it always bears the number 9. Wherever practicable, this principle is carried out in subdividing the sections. For instance, the Geology of North America, which bears the number 557, is subdivided by adding the sections of 970, (History of North America.) The Geology of Mexico then bears the number 5578: mnemonically, the first 5 is the Science number; the second 5, Geology; the 7, North America; and the 8, Mexico. Any library attendant or reader, after using the scheme a short time, will recognize, at a glance, any catalogue or ledger entry, book or pamphlet, marked 5578 as something on the geology of Mexico. Users of the scheme will notice this mnemonic principle in several hundred places in the classification, and will find it of great practical utility in numbering and finding books without the aid of catalogue or index, and in determining the character of any book simply from its call number as recorded on the book, on all its catalogue and cross-reference cards, on the ledger, and in the check-box.

In naming the headings, brevity has been secured in many cases at the sacrifice of exactness. It was thought more important to have short, familiar titles for the headings than that the names given should express with fulness and exactness the character of all books catalogued under them. Many subjects, apparently omitted, will be found in the index, assigned, with allied subjects, to a heading which bears the name of the most important only. Reference to this subject index will decide at once any doubtful points.

In arranging books in the classification, as in filling out the scheme, practical usefulness has been esteemed the most important thing. The effort has been to put each book under the subject where it would be

most useful to special students. The content or the real subject of which a book treats, and not the form or the accidental wording of the title, determines its place. Following this rule, a philosophy of art is put with Art, not with Philosophy; a history of mathematics, with Mathematics, not with History; for the philosophy and history are simply the form which these books have taken. The true content or subject is art, and mathematics, and to the student of these subjects they are most useful. The predominant tendency or obvious purpose of the book, usually decides its class number at once; still a book often treats of two or more different subjects, and in such cases it is assigned to the place where it will be most useful, and underneath the class number are written the numbers of any other subjects on which it also treats. These cross-references are given both on the book plate and the subject card as well as on the cross-reference card. As the cross-reference is itself the call number, a reader having any one of the three (book, title, or cross-reference) can instantly find either of the others without the intervention of catalogue or index. The call number is given also on the accessions catalogue and on the back of the book. The Van Everen printed numbers are used until the book is rebound, when the call number is stamped permanently on the back, for in this system the call number remains the same through all changes of buildings, arrangement, or catalogues.

The necessity of changes in the ordinary system, together with the very great difficulty of tracing all the cross-references, renders it quite impracticable to give the call-numbers in all places where they are needed. Even where given they must be written temporarily in pencil, in readiness for the changes that are sure to come; for, if printed, a new catalogue, with its attendant expense and confusion, becomes necessary as soon as the opening of new rooms, or removal to new quarters, or the growth of the library disarranges the books.

There is a single alternative: to arrange the books regardless of subjects, and even then the numbers must be altered in nearly all changes of buildings or rooms. In our system the book is numbered once for all, and can change that number only by changing its subject-matter. Of course mistakes occur as in any system, but when found they are as easily corrected as in any other plan. Certainly there is greater hope that the work will be done well when it is felt that it is not to be done over again in a few years at the longest.

If a book treats of a majority of the sections of any division, it is given the division number instead of the most important section number, with cross-references. Thus, a volume on light, heat, or sound would be classed under the head most fully discussed and referred to from the others; but if the volume treated also of mechanics, hydrostatics, and pneumatics, it would be classed as 530, or general physics, although no mention be made of electricity, magnetism, or molecular physics.

It is one of the marked advantages of the plan that these cross-references, notes, etc., may be added from time to time, as found convenient. It is necessary at first to find only the predominant tendency of the book, in order to catalogue it. If extreme care were taken to avoid mistakes, it might be well to keep books very difficult to class arranged by themselves for a time till read or carefully examined by some one competent to decide their true place. Cross-references are added when they are found necessary. After reading, a volume of sermons may be found to be aimed at the doctrine of evolution, though this fact was not noticed in classing. When it is found, however, the evolution number, 575, is written under the religion-and-science-sermon number, 255, and ever after a reader knows at once by this number the tendency of the volume. It is designed to add these numbers indicating more closely the character of the book as rapidly as possible, and specialists are invited to call the attention of the librarian to every desirable cross-reference they notice in their reading. These numbers take but little room, are easily added, and in most cases are valuable.

Collected works, libraries, etc., are either kept together and assigned like individual books to the most specific head that will contain them, or assigned to the most prominent of the various subjects on which they treat, with cross-references from the others; or are separated, and the parts classed as independent works. Translations are classed with their originals.

The alphabetical subject index is designed to guide, both in numbering and in finding the books. In numbering, the most specific head that will contain the book having been determined, reference to that head in the index will give the class number to which it should be assigned. In finding books on any given subject, reference to the index will give the number under which they are to be sought on the shelves, in the shelf catalogue, or in the subject catalogue. The index gives after each subject the number of the class to which it is assigned. Most names of countries, towns, animals, plants, minerals, diseases, etc., have been omitted, the aim being to furnish an index of subjects on which books are written, and not a gazetteer or a dictionary of all the nouns in the language. Such subjects will be found as special chapters or sections of books on the subjects given in the index. The names of individuals will be found in the Class List of Biography. Omissions of any of the more general subjects will be supplied when noticed.

In arranging the books on the shelves, the absolute location by shelf and book number is wholly abandoned, the relative location by class and book number being one of the most valuable features of the plan. The class number serves also as the location number, and the shelf number in common use is entirely dispensed with. Accompanying the class number is the *book* number, which prevents confusion of different books on the same subject. Thus the first geometry catalogued is marked 513.1, the second 513.2, and so on to any extent, the last number show-

ing how many books the library has on that subject. The books of each section are all together, and arranged by book numbers, and these sections are also arranged in simple numerical order throughout the library. The call number, 513·11, signifies not the eleventh book on shelf 513, or alcove 5, range 1, shelf 3, as in most libraries, but signifies the eleventh book in subject 513, or the eleventh geometry belonging to the library. In finding the book, the printed numbers on the backs are followed, the upper being the class and the lower the book number. The class is found in its numerical order among the classes as the shelf is found in the ordinary system; the book in its numerical order in the class. The shelves are not numbered, as the increase of different departments, the opening of new rooms, and any arrangement of classes to bring the books most circulated nearest to the delivery desk, will bring different class numbers on a given shelf. New books as received are numbered and put into place, in the same way that new titles are added to the card catalogue. The single digit occasionally prefixed to the book number, *e. g.*, the 3 in 421·3·7, is the nearest height in decimeters of books too large to be put on the regular library shelves, which are only  $2\frac{1}{2}$  decimeters apart. The great mass of the library consists of 2-decimeter books, the size numbers of which are omitted. Books from  $2\frac{1}{2}$  to  $3\frac{1}{2}$  decimeters in height have 3 prefixed to the book number, and are found on the bottom shelf of each range. The larger sizes are prefixed with 4, 5, etc., and are found on the special shelves provided, in order to avoid the great waste of space otherwise occasioned by the relative location. By this use of the size numbers a close economy of space is secured.

Thus all the books on any given subject are found standing together, and no additions or changes ever separate them. Not only are all the books on the subject sought found together, but the most nearly allied subjects precede and follow, they in turn being preceded and followed by other allied subjects as far as practicable. Readers not having access to the shelves find the short titles arranged in the same order on the shelf catalogue, and the full titles, imprints, cross-references, notes, etc., in the subject catalogue. The uncatalogued pamphlets treating of any subject bear the same class number and are arranged on the shelves immediately after the books of each section.

In a library arranged on this plan every specialist has his own special library. If he be a student of science in general, he is sent to class 5; if his department be zoölogy, his library is 59; if his specialty is shells, he finds all the works and references on that subject in library 594. Whether there be a specialist to watch it or not, every subject thus being in a library by itself, shows at once its resources and its wants as no catalogue can show them. A catalogue cannot be made that will so quickly and thoroughly decide a student's wants as the books themselves. Of course this advantage weighs most in a college or society library, where many persons have access to the shelves, but even in a collection where only the librarians are admitted, the close

classification on the shelves will be found of exceeding value. The desirability of such classing is never questioned, only the practicability. With our plan we believe it to be comparatively easy.

In both the authors' catalogue and the subject index, brevity has been studied because of the economy, but more because of the much greater ease of reference to a short title catalogue. The custom of giving full titles, etc., under authors, and only references or very brief titles under subjects, has been reversed. A reader seeking a book of a known author, in the vast majority of cases, wants simply the number by which to call for it, and can find it much quicker in a brief-title catalogue. In the rare cases where more is needed the class number refers instantly to all these facts on the cards. On the other hand, a reader seeking books on a known subject, needs the full title, imprint, cross-references, and notes to enable him to choose the book best suited to his wants.

The subject catalogue is a full-title shelf list on cards and is for the use of the public. The shelf list is a short-title subject catalogue in book form, made of separate sheets laced into an Emerson binder, and is for official use. We thus have without extra labor both full and short title subject catalogues and shelf lists. The public authors' catalogue is a printed volume; the official authors' catalogue or index is on cards. As a result, each of the public catalogues is checked by an official catalogue; each of the card catalogues by a book catalogue; each of the brief-title catalogues by a full-title catalogue—an advantage that will be appreciated by all librarians desiring accuracy in administration and in catalogues.

At the same time the most useful class lists of any subject may be made by simply printing the titles under its class number in the subject or shelf catalogue, according as full or brief titles are desired.

The Arabic numerals can be written and found quicker and with less danger of confusion or mistake than any other symbols whatever. The Roman numerals, capitals and small letters, and similar symbols usually found in systems of classification, are entirely discarded, and by the exclusive use of Arabic numerals in their regular order throughout the shelves, classifications, indexes, catalogues, and records, there is secured the greatest accuracy, economy, and convenience. This advantage is specially prominent in comparison with systems where the name of the author or the title must be written in calling for or charging books and in making references.

Some prominent librarians, while admitting the great superiority of the relative location for college and society libraries, have urged with force that in the public library, where so many thousand volumes must be called for, found, and charged, the additional labor and danger of confusion involved in giving the author's name instead of a book number make the system undesirable. But by substituting the book number for the author's name in the relative location we use even fewer figures than in the absolute location by shelves; for every numeral is used from 1

upward without limit, while in the absolute location, where the shelves hold only 25 to 40 volumes, all the numbers remaining, which might be written with only two digits, are not used. As a result, more figures are necessary in the shelf number. When it is considered that the library records are simply a mass of call numbers, and that these numbers are constantly written and printed in catalogues, shelf lists, indexes, etc., it will be seen that a saving of a single figure in the book number is a matter of importance.

As the numbers from 1 to 9 are not used in the regular scheme, it is practicable to effect a further saving by using only the last figure instead of the full class number of the sections where most books are circulated; *e. g.*, in English Literature the number 3 may be used, instead of writing 823 for each novel charged; and as there is no other class number 3 in the scheme, no confusion results.

Throughout the catalogues the number of a book shows not only where it is, but what it is. In the library accounts the character of each person's reading is clearly indicated by the numbers charged, and the minutest statistics of circulation in any subject are made by simply counting the call slips in the check-box, and recording the number against the class number in the record.

Our books are called for on blank slips, five centimetres square. On one of these each reader pencils the call number of the book wanted, and his name. After the book is charged, this slip is stamped with the date, and then placed in strict numerical order in the check-box. This is a small tray, six decimetres long and four wide, divided into ten columns, with ten compartments in each, numbered from 0 to 9, just large enough to hold the call slips upright. Each of these columns represents a class, and each of the compartments a division of that class. Thus, the fifth column is Natural Science. The first, or 0, compartment is General Works on Science; the next, Mathematics; the next, Astronomy; and so on throughout the scheme. No book is removed from the shelves for any purpose whatever, without putting in the check-box a slip giving its number and the purpose for which it was removed, with the date. Books loaned have the borrower's signature, which holds him responsible for the book. Books lost, condemned, sold, at bindery, in the cataloguer's room, in the reading room, etc., have their slips in their proper box, so marked. As will be seen, it is possible for the attendant within five seconds to tell whether any book belonging to the library is on the shelves or not, and that without leaving his chair. If the book be off the shelves, he can instantly tell where it is and when it will probably be back. *E. g.*, A. B. asks for book 329.17. The attendant consults the shelves and finds the book out. When there is no check-box this ends the matter, and A. B. perhaps tries a score of times to get this book, always finding it out, and unable to know whether it was drawn fifteen minutes before by some friend, or lost six months before he first asked for it. With the check-box in use, A. B. may ask where it is, and

with a glance at the slip, the attendant is able to tell him. The slip may be marked "C. D., June 5th," which shows that C. D. borrowed the book at that time. Or it may be marked B(ind); or R(eading) R(oom); or L(ost), or U(ataloguer's) R(oom), etc. In many cases a book is wanted very much, to simply verify a reference or look up a single point, and from the check-box the reader can learn where he can go to see it, if he cares to do so; or if he wants it for some time, he may ask to have it reserved. In that case the attendant marks the slip, under C. D.'s signature, R(eserve), A. B. This means, Reserve this book when it comes in for A. B., and send him postal notice of the fact. As the slips are removed on the return of the books, such an R is seen at once, and the book laid aside for the applicant. Great use of this R is made both by readers and library officials and attendants, who often have occasion to consult a book which at the time is out of the building. In such cases they pencil their initials under the name signed, and when the book comes into the building it is at once brought to them. Without amplifying this matter, it must be seen that our check-box is simply invaluable for a great many purposes which will suggest themselves to a practical librarian. Its peculiar advantage in our system of classification is that it always stands on the desk, a complete table of the books off the shelves in each subject. The slips in box 53 show just how many and what books are out in Physics; the slips under 823 show all the English novels that are in circulation, and of course show as well who have them. Such a table of circulation always at hand and without an item of expense or labor, (for the check-box is necessary for other purposes,) will certainly be highly prized by all who interest themselves in the character of books read, and there has never been a time when so much wise attention was given to educating the taste of readers in our public libraries as at the present. To convert this table into permanent statistics is but little labor. An attendant counts the slips on each subject as often as may be desired and records the number against the class number in the record. We find the most convenient record a sheet ruled to correspond with the divisions of the check-box into ten columns of ten squares each. This sheet is useful for a variety of purposes where the decimal system is in use. For statistics one column serves to show the circulation of each of the ten classes; an entire sheet just holds the record of circulation for each of the one hundred divisions, or for each of the one hundred sections of any class. On the sheet, as in the check box, each compartment represents a specific subject and the footing of the column a more general subject. If the compartment be used for sections, the footing of the column will give the circulation of the division; if used for divisions, the footing will give the circulation of the class; and if used for the classes, the footing will give the total circulation of the library.

By the use of size numbers the greatest possible economy of space may be secured, for the size distinction may be made for every inch or

even less if desired, and this without additional labor, as it will be seen that the size figure, when introduced, requires one less figure in the book number, and so does not increase the number of digits as would at first appear. *E. g.*, the last history of England may be 942:118, (118th book of regular size.) The next when received is found too large for the ordinary shelves, and instead of being numbered 942:119, it takes the size number 3 and is 942:3:1 (1st book size 3). Thus the book number starts anew with each size number, and in some cases even less figures are required because of the size distinction.

As the books can be put in only one place, the closer the classification is made by sizes or colors of bindings in order to make a fine appearance on the shelves, the less closely can it be made by subject matter. It has seemed much more important that books be grouped by their intellectual rather than by their physical distinctions; therefore we have made a size distinction only once in each decimeter of height. After three years' trial we are unable to suggest any improvement in this respect, as this avoids the great waste of space usually incurred in the relative location and still separates books on the same subject very little indeed. It is believed that the desire to make handsome shelves is giving way to the desire to make useful shelves, as surely as the architect's library with its fine vistas of books is giving way to the librarian's library, where the books can be produced at the desk on an average of one-fifth the time required in the more beautiful building.

In a popular library where there are very few books above the ordinary sizes it may be found a good plan to disregard the size number entirely. When a book is found too large for the shelves, a wooden dummy costing two or three cents can be put in its place, with the location of the volume itself penciled on the side. The few large books will be found in a very few classes; newspapers, cyclopædias, and atlases will contain most of them, and a single dummy in each class will be sufficient to point out the location of all the books. The size number, however, causes no confusion and serves an excellent purpose in a library like our own, where there are a great many large books. The size number should be written before the class number rather than after it in libraries where the volume number is written on the same line with the book number. In our library, the volume number is written as a subfigure to the book number.

Parts of sets, and books on the same or allied subjects, are never separated, as they are sure to be, sooner or later, in every library arranged on the common plan, unless it be frequently re-arranged and recatalogued. The great expense of this recataloguing makes it impracticable except for a few very wealthy libraries. In this system the catalogue and book numbers remain unchanged through all changes of shelving, buildings, or arrangement.

Duplicates have the same class and book number as the original book, but are marked copy 1, copy 2, etc. Of necessity, they must stand side

by side, and so the reader gets the book called for, without a second reference, if the book or any of its duplicates be in the library. If, after the first demand for a book is over, it is desired to withdraw a part of the duplicates, when taken from the shelves, there is no space left vacant any more than when a title is withdrawn from the card catalogue. It seems unnecessary in this place to point out the very great advantages of the card system, in a growing library. Certainly every librarian must be familiar with them. In addition to its own peculiar merits, this plan has all the advantages of the card catalogue principle; and of the relative location, which has been used and very strongly approved by prominent libraries. As in the card catalogue system, there is room for indefinite expansion without devices or provisions. Space is the only requisite, and if the shelf room is exhausted, the floor space is equally good, except for the inconvenience of stooping.

In our library as much space is left at the end of each subject as it is expected to fill. At the annual cleaning, as the books are put back on the shelves, these allowances are corrected, so that we seldom have to move subjects along to accommodate new books, unless there be an unexpected increase in some department. Some libraries will prefer to fill the most convenient shelves full and move along as new books are received. The labor of moving is purely mechanical and will be found very trifling indeed, compared with the advantages gained. But even this labor is almost entirely avoided by leaving space with each subject, as is customary in most libraries, and correcting the allowances each year as the books are replaced after cleaning. The second method has a special value to a library lacking shelf room, for every inch of shelving may be used regardless of the uneven growth of different subjects.

In the absolute location there may be fifty vacant shelves in theology while there are a thousand volumes more than the history shelves will contain. These shelves and books can be brought together only by a hopeless mingling of subjects or a change of catalogue numbers throughout. In our system the books are simply moved along till the new accession has room, as the cards are occasionally moved along in the card catalogue drawers. It is as impossible to overflow the limits of any subject on the shelves as it is in the card catalogue. In fact this feature of the system could be explained in no better way than to say that the card catalogue principle, which has proved so valuable in arranging titles on cards, is applied to the books on the shelves, and has all the advantages over the old methods that the card system has over titles pasted into volumes, where they must be frequently re-arranged in order to make them of any value for reference. The librarian has never to consult his shelves and shelf lists before he may know that there is a place for the book he is locating, for every book printed has its place on the shelves, relatively to its fellows, as much as every title has its place in the card catalogue. The class number assigns it to this place and all the rest of the labor is mechanical. Any attendant takes the book

and puts it into its place in simple numerical order. To describe these two widely different systems of locating books, we use the terms relative and absolute. We do not claim this relative location to be at all a new idea, for it has been often used in other libraries. We do claim to have found a method of securing its great advantages and at the same time avoiding its great defects as heretofore used.

The failure of the dictionary plan to meet the requirements of the scholar has been often pointed out. While it is most admirable for an index, there still exists much of the same need of a good subject catalogue as at the first. No one questions the immense superiority of a satisfactory classed catalogue. But the difficulties that stood in the way both in making and using such a catalogue have been so great that there has been a growing feeling among practical librarians that notwithstanding the very great advantages of a good classed catalogue the idea must be abandoned as impracticable. Still, many eminent authorities have ably argued that the poorest classed catalogue is better than none at all, and that any use of such a catalogue is in itself a lesson in bibliography.

The greatest objection to a classed catalogue has ever been the impossibility of knowing just where to put a book in cataloguing, and just where to look for it when it is again wanted. Different librarians, or the same librarian at different times, classed the same or similar books in widely different places. Where one man did all the work and held his place for a long series of years there was a certain degree of uniformity; but even then there was the danger of looking at the same book from different standpoints, thus causing confusion. This danger will be understood by any one who has ever attempted classification, and is not at all surprising when one considers how differently competent authorities often class the same subject. But, fortunately, practical usefulness does not require that this one's or that one's ideas be followed, but only requires that books of the same character be always put in the same place, and that there be some means of readily knowing where that place is. The index was designed, and is found in use, to meet both these requirements. In making the index, each subject difficult of classification is referred to a specialist, and the number of the class to which it is decided to assign it is given after this subject in the index. Whenever a book is catalogued, reference to this index decides at once what number to give it. If the first number is wisely assigned, all succeeding ones are sure to be, for the class number was given once for all, and it is only necessary to refer to the index to find what that class number is, so it will be seen that a perfect uniformity in classing is secured, for though any one familiar with the scheme will class most of the books without the aid of the index, it will be consulted in all doubtful cases. A new librarian is thus able to class in the same way that his predecessors classed. A clerk, if he only knows the subject of his book, by the use of the index, can class just as the chief of the catalogue de-

partment would class, and usually the difficulty is not in deciding what a book is about, but where to put it in the scheme. The index aims to give similar words, and the same words in different connections, so that any person of intelligence will hardly fail to get the right number. For instance, "telegraph" in the index is followed by two numbers, 384 and 654. A book on the telegraph may be a treatise on the desirability of Government control, etc., and then is clearly a question of social science, or it may be a practical hand-book for an operator, explaining the alphabet and the care of the instruments, when it is as clearly one of the useful arts. The cataloguer knows to which of these heads his book belongs, and the reader knows in which of its phases he wishes to examine the subject. The 3-and 6 beginning the numbers indicate clearly the character of each section. If the significance of these figures was entirely disregarded no confusion would result, for on consulting either of the numbers in the catalogue, the scheme, or on the shelves, the difference will be clearly pointed out.

The writer is aware that a subject index to accompany the classification has been suggested, but he has seen none that at all answers the purpose. In a book catalogue such an index could be made referring to the page on which a subject is classed, but it would be useless for a card catalogue and unsatisfactory even for the printed volume. A subject index, referring all minor topics to their exact place in the scheme, as does ours, would be found expensive in printing and inconvenient in use, were it not for our numerical principle, which secures at once economy and ease of reference. Where we have only to print "Geometry, 513," such an index would have to print, "Geometry, natural science, pure mathematics, geometry." This increases the bulk and expense of the index and so is objectionable, but the great objection is on the score of convenience; reference to a simple numerical arrangement being so much quicker and easier of comprehension by the public who use a library than involved alphabets and subalphabets with their ramifications. No individual is sufficiently learned to wisely classify books on all subjects and sciences; but the botanist can assign all botanical subjects to the right number, the mathematician all the mathematical topics, and thus, by the aid of specialists, the index can in time be made reasonably accurate. When thus made, the labor of classifying the books of a library will be reduced to much narrower limits than ever before. Corrections of any errors that may remain in the index will be gratefully received by the author. It is plain that this index serves equally well for the reader who wishes to know where to seek for books on any subject.

Some prominent opponents of classed catalogues have admitted that the subject index, in deciding where to class a book at first and where to look for it ever afterward, has removed their strongest objections. Certainly it would be impossible to make an index more cheaply or more easy of reference, it being a single alphabet of single words, followed

by single numbers. The index is really a skeleton of a dictionary catalogue. Instead of giving the book titles under each head, the number refers to all those titles in a way so simple and direct that it will hardly be criticised. The index may be made on any of the various dictionary plans, with all the advantages it may possess. To us the simplest seemed the best. We have given only very short headings in this index, but it is probable that one will be prepared, giving a brief indication in all doubtful cases of the standpoint taken in assigning the class number. We therefore claim to unite the advantages of the dictionary and classed catalogues, not by mingling them together, and so losing much of the simplicity of one and as much of the excellence of the other, but by really using both, each with its own merits. Only one set of titles is needed, for the class numbers make them available for both catalogues.

The advantages that the system possesses for making topical indexes of collected works, periodicals, transactions, etc., will be evident to every librarian. These consolidated indexes may be arranged together with the card catalogue of the books, or by themselves, as may seem best in each case.

These class numbers applied to pamphlets have proved specially satisfactory. The number is written on the upper left corner, and the pamphlets are then arranged, either in pamphlet cases with the books on the same subject or on special shelves, divided every decimetre by perpendicular sections. As each pamphlet is examined when received by the library, it is the work of a single moment to pencil on it its class number. There is no expense whatever incurred, and yet the entire pamphlet resources of the library on any subject can be produced almost instantly. The immense advantages of this plan over those in common use, both in economy and usefulness, will be appreciated by every librarian caring for a pamphlet collection. A catalogue of authors may be made on slips, if desired. The pamphlets themselves are the best subject catalogue.

The same arrangement is admirable for sale duplicates. They are so constantly changing that a catalogue can hardly be afforded, and a subject arrangement on any other plan than this is difficult to maintain. Still it is very essential that there be some means of knowing what duplicates there are on any given subject. By simply penciling the class number on the books and arranging them numerically, it is possible to give this information more quickly and more satisfactorily than by any other method, and at the same time the least expense is incurred. It is thought that the plan would be a great convenience to both dealers and customers, if applied to the miscellaneous stock of a large bookstore. Very often a much wanted book, especially if not recently published, is reported "not in stock" when such an arrangement by subjects would have revealed its place at once. Specialists often find on the shelves books that they would never have ordered, but are glad to buy after an examination. Experience proves it a profitable thing for a dealer to

have his books so arranged that each person may find those in which he is interested without examining the entire stock.

Though designed wholly for library use, the plan has proved of great service in preserving newspaper clippings in large envelopes arranged by class numbers; and more especially in taking the place of the common note book, and index rerum. Slips of uniform size are used with the class number of the subject written on the corner. Minute alphabetical headings are used under each class number and the slips are arranged in numerical order like the subject card catalogue. Clippings and notes arranged in this way are at all times their own complete index, and have the same advantages over the common scrap and note books that the subject catalogue has over the accessions book in looking up the resources of the library on any given subject. Those who have tried this method are so enthusiastic in its praise that it seemed worthy of mention in this place.

It would exceed the limits of this brief description to notice all the varied applications of the system. It is hoped that enough have been mentioned to show its wide adaptability to the wants of the librarian and the student.

The system is so flexible that it adapts itself to almost any circumstances. It may be used in any one of its applications without the others, and with a proportionate result. It may be applied to the pamphlets alone, bringing order out of chaos, and solving this vexed and vexing problem, or it may be used for the catalogues, leaving the arrangement on the shelves as before; or it may be applied to the shelves, while the catalogue is on the dictionary or any other plan. This application to the shelves may be either with or without the book numbers. If without, the books are arranged on the shelves alphabetically by authors under each class number. For a private collection, or a library where the books are not loaned from the building, this last plan has some marked advantages. The books on any subject, by the same author, always stand side by side whatever the time of their reception; and what is more important, the author and subject being known, the exact place of the book can be found without catalogue or index. On the other hand the invaluable shelf list must either be wholly abandoned or kept on cards in order to retain the titles in place, thus sacrificing much of its accuracy and convenience for examining and verifying; and (a much more serious objection) in order to identify the book the author's name and frequently a part of the title must accompany the class number on all the records, catalogues, and references. These objections, with the almost certain confusion of different authors of the same name, or very similar names, make the alphabetical arrangement almost impracticable for a circulating library. The same objections apply with almost the same force to a numerical arrangement based on the alphabet, for the indefiniteness thus introduced becomes a source of confusion in any library where much of the routine work must be done by attendants of little experience.

If the system be used only in the catalogues, the shelf number should be penciled on the card to avoid a second reference to find where the book is; the subject catalogue will be arranged by the class numbers, and the authors' catalogue should also give the class number to indicate the character of the book. If the system be used only for arranging on the shelves, the shelf list will, of necessity, be a brief subject catalogue; the call numbers, whether in an author's or dictionary catalogue, will indicate the exact nature of the book, and books on the same subject will stand together on the shelves. The system is most valuable, of course, when used in all its applications.

If our class numbers were omitted in the scheme and on the cards, there would be left the ordinary classed catalogue. Of course, if these numbers are applied to the cards of a subject or authors' catalogue arranged on any other plan, the catalogue becomes identical with ours by simply re-arranging the cards numerically. A catalogue is a collection of titles as a library is a collection of books, and the question at issue is merely one as to the best arrangement of these titles; the scheme, therefore, can be applied to almost any kind of card catalogue without any waste of labor, for the titles wanted are the same, and it is only necessary to have space enough somewhere on the card to write the class and reference numbers.

We found on trial that cards 15 by 7½ centimetres are the most desirable for the subject catalogue, and 10 by 5 for the authors' index. We use a green card, projecting 5 millimetres above the white, as a guide-board, preferring it to the wooden guide-boards commonly used because of economy in first cost and in space occupied. In the authors' catalogue, these green cards take the place of the head-lines in a dictionary. In the subject catalogue, each subject is preceded by a green card, giving the heading as in the scheme, and in many cases with greater fulness. This heading is always prefixed with the class number. The catalogue may thus be used as if there were no class numbers, for its headings are as clearly pointed out as in any classed catalogue. In practical use, however, even those least familiar with the scheme will work by numbers rather than headings, as it is so much more convenient and rapid.

The plan was adopted in the Amherst College Library in 1873, and the work of transferring the entire library to the new catalogue at once commenced. It was found entirely practicable to make the change gradually, as means allowed, without interfering in any appreciable degree with the circulation of the books. As no shelf in the library contained more than fifty books, the only distinction necessary to prevent confusion between the two systems in use at the same time was to omit the first fifty book numbers of each class, numbering, *e. g.*, the first English Grammar 425·51, instead of 425·1. The attendants immediately recognized any book number above 50 as belonging to the new system and no confusion resulted. The books are taken from the shelves for recataloguing only as fast as needed; the new class number is immedi-

ately substituted for the old shelf number, and the books are placed in the classified portion of the library. When the old shelves are cleared the book numbers from 1-50 will be assigned as fast as books are received. As the shelf catalogue is on loose sheets, there is nothing to be altered or rewritten. The new sheet for the books from 1-50 is laced in just before the others, and the order is as perfect as if it had been done at the first. No extra labor is required, and still the confusion and interruption of circulation incident to recataloguing on other plans are avoided. The three years' trial to which it has been thus subjected has more than justified the claims of its friends, and it is now printed with the more confidence on this account. It has been kept in manuscript up to this time, in order that the many minor details might be subjected to actual trial and modified where improvement was possible.

The labor involved in preparing the classification and index has been wholly beyond the appreciation of any who have never attempted a similar task. Much valuable aid has been rendered by specialists in many departments, and nearly every member of the faculty has given advice from time to time. Among the many to whom thanks are due, special mention should be made of Mr. O. A. Cutter, the librarian of the Boston Athenæum, and Mr. John Fiske, of the Harvard University Library, for valuable suggestions and appreciative criticism. While these friends are in no way responsible for any remaining imperfections in the scheme, they should have credit for many improvements which have been made during these three years of revision. The author is perfectly well aware that the plan here sketched offers many inconsistencies. The difficulty, however, has not been in criticising the scheme as drawn up, but in finding better headings to take the place of those which are not wholly satisfactory. Though a great deal of labor has been spent in selecting these heads, the author's claims of excellence are made for his plan, not at all for its execution in this first attempt. The essential character of the plan has remained unchanged from the first. Doubtless other improvements are still possible, and it is hoped that users of the scheme will call attention to any proposed change in the naming or arrangement of the headings, or to any omission which should be supplied in the subject index. It is obvious that there would be very great incidental advantages if libraries adopting the plan would, as far as possible, use the same classification and index. In such cases the catalogues and indexes of any library would be of great value to the others, and in many ways it would be mutually advantageous to the libraries concerned.

Before printing, the plan was submitted to quite a number of librarians for criticism. Among the hundreds of points raised as to its practical workings and usefulness, there was only one in which it was not shown to be equal or superior to any other system known. This objection applied only to the arrangement on the shelves; not at all to the catalogues or indexes. It was, that in this relative location, a book which this year stands, *e. g.*, at the end of a certain shelf, may not be

on that shelf at all another year, because of the uneven growth of the parts of the library. This slight objection inheres in any system where the books are arranged by subjects rather than by windows, doors, shelves, and similar non-intellectual distinctions.

The claims of the system as in use with us may be summed up as follows: Compared with other systems it is less expensive; more easily understood, remembered, and used; practical rather than theoretical; brief and familiar in its nomenclature; superior to all others in arranging pamphlets, sale duplicates, and notes, and in indexing; susceptible of partial and gradual adoption without confusion; more convenient in keeping statistics and checks for books off the shelves; the most satisfactory adaptation of the card catalogue principle to the shelves. It requires less space to shelve the books; uses simpler symbols and fewer of them; can be expanded without limit and without confusion or waste of labor on both catalogues and shelves or in the catalogues alone; checks more thoroughly and conveniently against mistakes; admits more readily numerous cross-references; is unchangeable in its call numbers, and so gives them in all places where needed, as given in no other system; in its index affords an answer to the greatest objection to classed catalogues, and is the first satisfactory union of the advantages of the classed and dictionary system.

In this hurriedly prepared account of his plan, the author has doubtless failed to meet many objections which may be raised and which he could easily answer. He would therefore ask the privilege of replying personally to any such objections, where they arise.

In his varied reading, correspondence, and conversation on the subject, the author doubtless received suggestions and gained ideas which it is now impossible for him to acknowledge. Perhaps the most fruitful source of ideas was the *Nuovo sistema di catalogo bibliografico generale* of Natale Battezzati, of Milan. Certainly he is indebted to this system adopted by the Italian publishers in 1871, though he has copied nothing from it. The plan of the St. Louis Public School Library and that of the Apprentices' Library of New York, which in some respects resemble his own, were not seen till all the essential features were decided upon, though not given to the public. In filling the nine classes of the scheme the inverted Baconian arrangement of the St. Louis Library has been followed. The author has no desire to claim original invention for any part of his system where another has been before him, and would most gladly make specific acknowledgment of every aid and suggestion were it in his power to do so. With these general explanations and acknowledgments he submits the scheme, hoping it may prove as useful to others as it has to himself.

[To illustrate and explain the description of the Amherst College Catalogue given in the preceding text, the author has added the following notes embracing specimen pages of the classification and subject-index, and a description of the catalogues used, with an explanation of their method and peculiarities.—EDITORS.]

## II.—SPECIMEN PAGE OF THE SUBJECT INDEX.

Find the subject in this alphabetical index. The number following it is its class number. The entire resources of the library on this subject will be found under this number in the subject catalogue, the shelf catalogue, and on the shelves.

Where a class number ends in a cipher, the subject will be found on reference to the prefixed classification, to be subdivided.

|                                    |          |                                 |          |                                  |          |

## III. — CATALOGUES.

*Accessions.*—This gives, for each volume belonging to the library: date of reception, accessions number, class, book, and volume number, author, short title, place and date of publication, size, binding, cost, fund, or, if presented, the donor; in the column of remarks is noted any change, such as rebinding, adding supplements, or transferring to another number; or the disposition in case the volume be lost, sold, condemned, or exchanged. The accessions number also appears on the shelf catalogue, and on the reverse of the title page and in the center of the bookplate of each volume. This catalogue contains facts not elsewhere recorded, and is used to identify books, and check other catalogues, and to show by its last number the total volumes, and by its last pages the latest additions to the library.

*Index.*—This is the official authors' catalogue, being the copy from which the public authors' catalogue is printed. It differs from that in no respect, except that being on cards its arrangement is in a single alphabet, while the public catalogue in book form is continued in written supplements. This index is for the use of the librarians in checking the public catalogue.

*Shelf.*—This is the official subject catalogue, and gives the class, book, and volume number of each volume, together with its accessions number, author, and short title. It is on loose sheets, laced into an Emerson binder, and is arranged like the public subject catalogue by class numbers. It differs from that in being in book form instead of on cards—arranged under each class in the order of the books on the shelves instead of alphabetically by authors—and in giving merely an abbreviated title in place of the full title, imprint, notes, and cross references of the subject catalogue. It is used in the annual examination of the library, and also serves as the librarian's subject catalogue, giving a compact list of all the books which the library has on any given subject.

The accessions, index, and shelf catalogues are kept at the desk for the use of the librarians, and are not accessible to the public. In cases of need, consultation is allowed on special application.

*Subject catalogue.*—This catalogue is on large cards arranged by subjects, and alphabetically by authors, under each class number. Each card gives at the top the class and book number and the name of the author; the body of the card contains the full title of the books, copied exactly from the title page, omitting only mottoes, repetitions, or other matter not essential to a full and clear titular description of the book. After the title, is given the place and date of publication, with the year of the copyright, if different; the edition, unless it be the first; the number of volumes or of pages if the book be in only one volume; the illustrations, maps, plates, and portraits, if there be any; and the size taken from actual measurement and not from the fold. After these imprint entries are given any necessary notes; and at the left of the card the cross-reference numbers if the book treats of more than one subject.

This catalogue can be used to advantage only with the aid of the classification or index. In order to learn what the library has on any given subject, find from this index the class number of that subject. Under this number in the subject catalogue will be found the full titles of the books with imprints, cross references, and notes. The class number by which the cards are arranged is given in the upper left corner,

and immediately under it the book number. Any other class number given in the left-hand margin refers to another subject of which the book also treats. When the class number at the top is followed by an additional figure in brackets, the subject as given in the printed scheme has been subdivided in arranging the cards. This subdivision will be found on the first card of the catalogue which bears this class number. These figures in brackets determine the arrangement of the titles in the catalogue, but on the shelves, in the shelf catalogue, and in calling for and charging books, they are entirely disregarded. Thus a book numbered 942[7]·14 would be in the catalogue among the 942 cards arranged by the figure in brackets as though it were a decimal, but it would be called for as 942·14, the brackets indicating that the final classing was limited to the catalogue and was not extended to the shelves. If a fourth figure is added without brackets, the final classing is extended to the shelves as well as to the catalogue, and all the figures must be used in calling for the book. In such cases the added figure is treated as a decimal in the arrangement, though the decimal point is not written.

The last card which bears any class number gives under that number, followed by the word *See*, the call numbers of other books which treat of the same subject, but are classed elsewhere. General cross references are also made in many cases, without specifying individual books, as from commerce as a question of social science (380) to commerce as a useful art, book-keeping, business manuals, etc., (650.) In such cases there is a card under 380 *See* 650 and under 650 *See* 380. From whatever standpoint a subject is approached the cross references guide at once to the same subject treated in its other relations. These cross references, both general and specific, are often accompanied by brief notes, characterizing the books to which reference is made. There will be found at the beginning of many class numbers, a card noting the most valuable books on that subject, and the best of the articles in periodicals, transactions, and collected works, with the volume and page where they may be found. It is hoped to give special prominence to these notes for the guidance of readers, and they will be added as rapidly as other duties allow.

Many subjects will have no subsection cards at the beginning; some will have no reference cards at the end; and some may have no titles given under the number. The scheme provides a place for books on all subjects, whether the library has them or not; so where no titles are given under a class number it shows that the library has as yet no books on that subject.

Articles in periodicals and transactions, separate volumes of sets and collections which are located together, if catalogued, are put under their proper subject number, but no book number is given with it. The call number of the book, where they may be found, is always given in the margin preceded by the word *In*.

This is the fullest of the library catalogues, and should always be consulted in looking up the resources of the library on any given subject. This catalogue is kept in the case of drawers at the left of the desk. Under no pretence can the cards be taken from beneath the wires.

*Classification and subject index.*—This gives in detail the scheme of classification according to which the books are arranged on the shelves, and in the subject catalogues. Following this scheme is the alphabetical index of subjects, which refers any subject to its proper heading in the classification. This subject index is the key to the shelves, and to the subject catalogue, near which copies are kept for the use of the public. Explanations and directions for use accompany it.

*Authors' catalogue.*—This gives, under the names of authors, societies, etc., alphabetically arranged, brief titles of all their works which the library contains. Books edited, translated, etc., are also included among an author's works, but are printed in a distinctive type.

This catalogue is of authors only, and should not be consulted for either subjects or titles. The titles of books published without the authors' names are arranged in an alphabet by themselves at the end of the catalogue, and if the names can in any way be found they are also entered in their regular places.

Books added to the library after the printing of this catalogue must of necessity be sought for in the written supplement. In using this supplement it must be remembered that exact alphabetical arrangement of the names under each letter is not always practicable, though books are entered as nearly as possible in their true order. When the author of the book wanted is known, this catalogue should always be consulted to find the class and book number by which to call for it. Explanations are given in the preface to the catalogue, and five copies with the written supplement are kept on the counter for the use of the public.

#### IV.—EXPLANATIONS.

The titles of the subject catalogue are exact transcriptions of the title page, neither amended, translated, nor in any way altered, except that mottoes, titles of authors, repetitions, or matter of any kind not essential to a clear titular description, are omitted. Omissions of mottoes are indicated by three stars (\* \* \*); of other matter by three dots (. . .). The phraseology, spelling, and punctuation of the title are exactly copied; but capitals are given only to proper names and adjectives, and initial words of sentences. Any additions needed to make the title clear are supplied and inclosed by brackets.

After the titles, are given in order: the place of publication; the year; the year of copyright, if different, in brackets; the edition; the number of volumes, or of pages if in only one volume; the illustrations, maps, plates, or portraits; and the size nearest in the arbitrary scale, regardless of the fold of the sheet. This scale gives the nearest heights in decimeters, outside measurement: Square and oblong books have the size prefixed by *sq.* or *ob.* Books 1 decimeter high are called 32°; 1.5 deci., 16°; 2 deci., 12°; 2.5 deci., 8°; 3 deci., 4°; and all others are marked simply by the nearest height, *i. e.*, a book marked 4 is between 3.5 and 4.5 decimeters high. In books having more than one pagination the number of pages is indicated by giving the last number of each pagination connected by a +; an added + indicates additional matter unpagged.

These imprint entries give the facts regardless of the title page, and are left blank only when they can be ascertained neither from the book itself nor from other sources.

The contents of volumes are given when on title pages, or when necessary to properly identify the volume, but no analysis is attempted. Necessary notes are given at the bottom of the subject card after the imprint entries.

Duplicates are simply marked copy 2, copy 3, etc., and bear the same class and book number, but editions of the same book distinct in character are catalogued separately.

In all the catalogues, books are entered under the surnames of authors when known; under the initials of authors' names, when these only appear, the last initial being put first; under the pseudonyms of the writers, when the real names are not ascertained; under the names of editors of collections; under the names of countries, cities, societies, or other bodies which are responsible for their publication; under the first word not an article of the titles of periodicals, and of anonymous books the names of whose authors are not ascertained. Commentaries with the text, and translations are entered under the heading of the original work, but commentaries without the text are entered under the name of the commentator. The Bible or any part of it in any language is entered under the word Bible. Books having more than one author are entered under the first named on the title.

In the headings of titles, the names of authors are given in their vernacular form. In English and French surnames beginning with a prefix, (except the French *de* and *d'*.) the name is recorded under the prefix. In other languages and in French names beginning with *de* and *d'*, the name is recorded under the word following the prefix. Compound surnames are entered under the first part of the name. Noblemen and ecclesiastical dignitaries are entered under their family names, but sovereigns, princes, Oriental writers, friars, persons canonized, and all other persons known only by their first name, are entered under this first name.

The catalogue is not a biographical dictionary; it therefore only gives the names of authors with sufficient fullness to distinguish them from each other in practical use.

Names in **full face type** are the ruling headings under which the books are entered in the various catalogues. Entries not beginning with this type are in addition to the first or main entry, and are made under the names of translators, editors, commentators, continuators, etc., as participators in the authorship; also, in the case of books having more than one author, or having both generic and specific titles, or published by societies or other bodies, and having also the name of the individual author. These additional entries are made in order to carry out the plan of the authors' catalogue, which aims to give under each author's name all his works which the library contains.

The works of an author known by more than one name are given all together under the form of name chosen. Any other name or title by which he may be known, if it differs in the first three letters, is entered in its alphabetical place, followed by the word *See* and the name under which the books are entered. Such cross references have no titles given under them, but are simply guides to the name chosen.

A single dash indicates the omission of the preceding heading; a subsequent dash indicates the omission of a subordinate heading or of a title. A dash connecting numbers signifies *to and including*; following a number, it signifies *continuation*. A ? following a word or entry, signifies *probably*. Brackets inclose words added to titles or changed in form.

The German diphthongs *ä, ö, ü* are written *ae, oe, ue*.

Dates are all given in years of the common calendar, and Arabic numerals are uniformly used for all numbers.

## II.—PLAN OF NEW CATALOGUE OF THE BROOKLYN MERCANTILE LIBRARY.

A DICTIONARY CATALOGUE DIFFERENT FROM SOME OTHERS — EXAMPLES OF DIFFERENCES — SUBJECT CLASS LISTS — CROSS REFERENCES — ANALYSIS OF POLYGRAPHIC WORKS — INDEXES OF PERIODICALS — FAC SIMILE EXAMPLES.

The work belongs to what is called the dictionary type, with, however, some material variations from the arrangement of subject matters adopted by the Boston Public Library and by the Boston Athenæum. As in the Boston plan, there is one general index, including, 1, Authors; 2, Titles; 3, Subjects; but 4, using certain general class headings, such as **Biography**, (individual subjects,) **Countries**, (alphabetical arrangement,) **Fiction**, (alphabetical arrangement of authors and titles,) and **Plays**, (alphabetical arrangement of authors and titles found in collections,) which are composed of material which in the Boston catalogues is scattered throughout the general alphabet, but which in this catalogue is abstracted from the general alphabet, forming separate class lists. Besides this departure from the Boston methods, there are other points of difference.

1. The Boston catalogues place, under the name of the country, all subject matters having any association, immediate or remote, with **Countries**; such as, 1, *Description and Travel, History, and Political Institutions*; as also **Arts and Sciences, Costume, Fine Arts, Heraldry, Language, Law, Literature, Music, Poetry**, etc.; leaving for the range of subjects last mentioned only such works as are general in their scope.

I have aimed to draw some line between what relates to the physical, material, political, and social condition of a country, *e. g.*, what we might expect to find in a geographical and historical gazetteer, and to make the national feature of such subjects as **Arts** and Sciences, **Costume**, **Fine Arts**, etc., subordinate to the generic subject.

2. The Boston catalogues enter a book at once under its most specific heading, while as a rule my method enters it under the most general subject class heading plus its most specific subheading. Thus I make *Locks and Keys* a subhead of **Arts** (Useful), making a cross reference from **Locks** and **Keys** in the general alphabet to **Arts** (Useful: *Locks and keys*). My scheme is designed—

1. To afford readers comprehensive class lists, or subject class lists, containing all the works the library offers in certain great departments, such as **Biblical**, religious, and ecclesiastical literature; **Biography**; **History**, **Geography** and **Travels**, and **National** institutions (represented by **Countries**;) **Fiction**; **Government** and politics; **Language**; **Literature**; **Political** economy; **Social** science; **Man** (including anthropology, ethnology, and Prehistoric man); **Philosophy**; **Physics**, etc.

2. To arrange the specific subheads of larger subject headings in the most perspicuous and economical way, consolidating cognate subheads when possible, and making cross references when needed.

3. To place in the general alphabet any such topic as, in my judgment, is on the one hand too fragmentary or insulated, or on the other hand too complex and many sided to be made a subheading under any one comprehensive heading; as, 1, **Argonautic** expedition; 2, **Botany**.

4. Under any large class, such as **Biblical**, religious, and theological literature, to make cross references from one subhead to other cognate subheads, and in the general alphabet to make cross references from subheads to the general class plus the subhead.

5. The arrangement under class headings ought at least to be as obvious as the general arrangement of the catalogue, or as the arrangement of titles under an author. The question as to whether a work is most concerned with subject or with form need not trouble any one, if, as an object of inquiry, it is placed under the proper heading, along with like works, and if it is made easy for the inquirer to find it. The catalogue is designed to secure, as far as possible, in one alphabet, an index to authors, titles, class headings, subject class headings, specific subjects and subheads, so that the inquirer may at once be directed to what he is in search of.

Considerable attention has been given to the analysis of polygraphic works, this extending to the class of miscellaneous essays, and to some portion of the periodical literature issued since 1852, the date of Mr. Poole's Index. The class of **Biography** already printed includes much of such material. Out of about 11,000 entries, 2,900 are to independent works, 5,400 to volumes of essays, and 2,900 to articles in periodicals. Some specimens of the catalogue as printed are given below, to show

the typographical arrangement, and as a context to accompany the foregoing remarks. Pages 39, 40, 77, and 109 scarcely require any explanation. On pp. 252-253<sup>1</sup> there are examples of cross references from title to author, several from subheads to their respective classes, and specimens of author entries. Contents are sometimes arranged in the natural order, and sometimes indexed in alphabetical order. The precedent set by Mr. Cutter, in his Catalogue of the Boston Athenæum, in using a larger or brevier type for whole books, and a smaller or nonpareil type for parts of books and pamphlets, has been for the most part followed. As a rule, author entries take not more than two lines, frequently not more than one. In classes, the place of publication and size are omitted, and titles frequently come within one line when printed in brevier, and do so in the great majority of cases when printed in nonpareil. Cross references and title entries are always printed in nonpareil and rarely occupy more than one line.

It should be observed that the specimens of the catalogue appended are not strictly speaking fac-simile reproductions. The columns of the Brooklyn catalogue being wider, many titles come within one line which in the specimens take two lines. As actually printed there are two columns to a page, the brevier type allowing 81 and the nonpareil type 102 lines for titles. The number of types to each line, including spaces, would be about 57 brevier and 65 nonpareil; not including spaces, would be about 41 brevier and 53 nonpareil. The dimensions of the whole page are  $9\frac{1}{8} \times 5\frac{9}{16}$  inches.

# I. EXAMPLES.

[Commencement of subject class list of Arts (Useful) and manufactures.]

[Top of page 39.]

## ARTS (USEFUL) AND MANUFACTURES. 39

*With Works Introductory to the Study and Philosophy of Science.*

NOTE.—The following subjects are assigned independent places in the general alphabet, *viz.* **Agri-**  
**culture**;—**Animal magnetism**;—**Anthropology**;—**Archæology**;—**Architecture**;—**Astronomy**;—  
**Biblical**, Ecclesiastical, and Relig. literature, **Birds** and ornithology;—**Botany**;—**Chemistry**;—  
**Domestic economy**;—**Ethnology**;—**Fine arts**;—**Geography**;—**Geology**;—**Government** and poli-  
 tics;—**History**;—**Insects** and entomology;—**Language**;—**Law**;—**Logic**;—**Mathematics**;—**Medi-**  
 cine;—**Microscope**;—**Military science**;—**Meteorology**;—**Mineralogy**;—**Moral science**;—  
**Music**;—**Natural history**;—**Naval science**;—**Occult sciences**;—**Philosophy**;—**Physics**;—**Phre-**  
**nology**;—**Political economy**;—**Shells** and shell-fish;—**Social sciences**.

II. EXAMPLES.

[Beginning of subject class list of religions and theological works, placed under **Biblical**, as the initial word, to secure direct reference to page from the subheads.]

[Top of page 77.]

**BIBLICAL, RELIGIOUS, AND ECCLESIASTICAL LITERATURE. 77**

*Alphabetical Arrangement of Subjects.*

NOTE.—Readers are reminded that as a rule Biblical and Theological Encyclopædias will afford the readiest means of arriving at information upon special topics, archæological, doctrinal, historical, personal, or otherwise.

**Absolution.**

*Lloyd (H.)* The power of the keys. 1873.. 3567. 21

**Acts of the Apostles.**

*Alexander (J. A.)* The Acts; expounded. 2 v. 1861. . . . . 3755. 08  
*Arnott (W.)* Church in the house; lessons, etc., 1874. . . . . 3512. 12

**Apocryphal Gospels, Acts, etc.**

*Couper (B. H.)* Apocryphal gospels, etc., tr. with notes, 1867.

*Contents:* Gospel of James. Pseudo-Matthew, or of the infancy of Mary and of Jesus. Gospel of the nativity of Mary. History of the carpenter. Gospel of Thomas. Arabic gospel of the infancy. Letter of Abgar to Jesus. Letter of Jesus to Abgar. Letter of Lentulus. Prayer of Jesus, Son of Mary. Story of Veronica. Gospel of Nicodemus, or Acts of Pilate; 2d part, or Descent of Christ to the underworld. Letter of Pilate to Tiberius. Letters of Herod and Pilate. Epistle of Pilate to Cæsar. Report of Pilate, the governor.

Trial and condemnation of Pilate. Death of Pilate. Story of Joseph of Arimathea. Revenging of the Saviour. Syriac gospel of the boyhood of Jesus.

*Hone (W.)* Apocryphal New Testament. 1846. 3757. 01

*Contents:* Gospel of the birth of Mary. Protevangelion by James the lesser. Gospel of the infancy of Jesus Christ.

Church histories, from the 16th century; and the article 'Arminianism' in *M'Clintock and Strong's Cyclopædia*, v. 1.

**Arianism.**

*Newman (J. H.)* Arians of the 5th century. 1871. 3413. 22

*See also Church history*, from the 4th to the 7th century; *also Creeds*;—*Doctrines*;—*Trinitarianism*.

**Astronomy and Religion.**

*Burr (E. F.)* Ecce cælum. 1869. . . . . 4016. 05  
*Chalmers (T.)* Discourses on the christian revelations, viewed in connection with the modern astronomy. 1817. . . . . 3332. 11

[Foot of page 77.]

[Top of page 78.]

**78 BIBLICAL AND RELIGIOUS WORKS: Astronomy to Bible.**

*Dick (T.)* Works. v. 2, 1853. . . . . 5033. 02  
*Contents:* Celestial scenery. Siderial heavens. Practical astronomer. Solar system.  
*Foster (J. A.)* A. and revelation. [In his Critical essays, v. 2.] . . . . . 2525. 04  
*Hervey (J.)* Contemplations on the starry heavens. [In his Meditations] . . . . . 4537. 19  
*Mitchell (O. M.)* Astronomy of the Bible. 1867. 4016. 19  
*Ormswaite (Lord.)* A. and geology compared. 1872 . . . . . 4013. 07  
*Stars and the earth.* [anon.] 1868. . . . . 4016. 32

**Bible.**

NOTE.—For other headings relating to the Bible see *Apocrypha*;—*Apocryphal*;—*Deluge*;—*Evidences*;—*Old Testament*;—*New Testament*;—names of different Books of O. and N. T.;—*Parables*;—*Religion and science, etc*, etc. *Also Jews*;—*Palestine*, and names of sacred places (in class *Countries*).  
*Boothfield (B.)* \*Prefaces to the first editions of the sacred Scriptures. 1861 . . . . . 2766. 01

## III. EXAMPLES.

[Beginning of Biography.]

[Top of page 109.]

**BIOGRAPHY.—PART 1: COLLECTIVE WORKS.**

NOTE.—Part 2, Individual Biography, begins on page 116.

*Uses of Biography.*

- Adolphus (J. L.)* Oxford prize essays. v. 3 . . . 2541.13  
*Brown (J. B.)* On the uses of B. 1871 . . . 3024.12  
*Carlyle (T.)* Essays . . . 2517.12  
*Foster (J.)* Critical essays. v. 2. 1856 . . . 2525.04  
*Helps (A.)* Friends in council. 2d ser., v. 1 . . . 2531.26  
*Hood (E. P.)* Uses of B. 1852 . . . 3032.16

*Self Biography.*

- Disraeli (I.)* Miscellanies. 1796. pp. 59-77 . . . 2529.28  
*Foster (J.)* On a man's writing memoirs of himself. [*In his* Essays. 1835.] . . . 5412.06  
*Hope (A. J. B.)* Essays. 1844. pp. 209-229 . . . 2532.18

*Bibliography.*

- \* *Oettinger (E. M.)* Bibliographie biographique universelle. 2 v. 1854 . . . 2736.09

*General Biographical Dictionaries.*[See also **Encyclopædias**, in the general alphabet.]

- Aiken (J., and others.)* General biography. 10 v. 1793-1815 . . . 3228.01  
*Appleton's* cyclopædia of biography. Edited by F. L. Hawks. 1856 . . . 3236.01

\* \* \* \* \*

*Special collections.*

NOTE.—The contents of most of these collections, when not given under the following headings, will be found under the *authors' names*, in the general alphabet.

**Adventurers.**

- Davenport (R. A.)* Narratives of peril and suffering. . . . 3261.01  
*Contents:*—Charles Edward; J. J. Casanova; W. Maxwell; earl of Nithsdale; Stanislaus Lecinski, king of Poland; H. Cortez.  
*Wraxall (L.)* Remarkable adventurers. 2 v. . . . 3264.23

**American Biography: 1. Dictionaries.**

- Allen (W.)* American biographical dictionary. 3d ed. 1857. . . . 3247.01  
*Drake (F. S.)* \*Dictionary of American biography, including men of the time. 1872. . . . 3247.18  
*Rogers (T. J.)* A new American biographical dictionary. 4th ed. 1829. . . . 3242.05

**American Biography: 2. Miscellaneous Collections.**

- American adventures by land and sea.* [anon.] . . . 1071.03  
*American Nepos.* 2d ed. 1811. . . . 3242.07

\* \* \* \* \*

[Top of last page of Biography.]

**BIOGRAPHY (INDIVIDUAL): Wycliffe to Zwingli. 215****WYCLIFFE (John), continued.**

See also North Brit. rev., v. 20, 1833-4; Quar. rev., v. 104, 1858, or Littell, 1854, v. 4; Westminster rev., v. 62, 1854.

See also article in Allibone, v. 3, with authorities; references in Poole's Index; works on the church history of England, p. 84; histories of the Reformation, p. 99; and general histories of England (under Countries).

- WYMAN (Jeffries, Amer. comp. anatomist, b. 1814, d. 1874).*

See Atlantic monthly, Nov., 1874 (by O. W. Holmes); Old and New, v. 101, 1874; Popular science monthly, Jan., 1875 (by B. G. Wilder).

1874. . . . 3251.14

See also Bentley's miscel., v. 40, 1856 (by T. P. Grinstead); Temple bar, June, 1871.

- YOUNG (Edward, Engl. divine and poet, b. 1681, d. 1765).*

— Bell (R.) Lives of English poets, v. 2. . . . 3211.17

— Johnson (S.) Lives of the English poets. v. 2. . . . 3263.02

— Mitford (J.) Life of [In Y's Poet. works, v. 1. 1854] . . . 1696.12

See also N. A. rev., v. 70, 1854; West. rev., v. 67, 1857.

- YOUNG (Thomas, M. D., Engl. physicist, b. 1773, d. 1829).*

— Peacock (G.) Life of. 1855. . . . 3187.25

\* \* \* \* \*

## III. EXAMPLES—Continued.

[Foot of last page of Biography.]

- YATES (Joseph, C., *gov. of State of New York*, b. 1768, d. 1837).  
 — Jenkins (J. S.) *Governors of New York*, p. 319–345. 1851. . . . . 3247.03  
 YEARSLEY (Ann, *English poetess*, b. 1756? d. 1806).  
 — Southey (R.) *Uneducated poets 1836*. . . 3264.02  
 YORK (*Cardinal of*). See STUART (*Royal house of*), p. 202.  
 YORKE (Charles, *Engl. lord chancellor*, b. 1722, d. 1770).  
 — Campbell (J., *lord*). *Lord chancellors of England*, v. 3. . . . . 3254.07  
 YORKE (Philip, *earl of Hardwicke, lord chancellor*, b. 1690, d. 1764).  
 — Harris (G.) *Life of*. 3 v. 1847. . . 3075.16  
 — Campbell (J., *lord*). *Lord chancellors of England*, v. 3. . . . . 3254.07  
 YOUNG (Brigham, *Mormon high-priest*, b. 1801).  
 — Waite (M<sup>rs</sup>. C. V.) *Mormon prophet and his harem*. 1866. . . . . 3187.16  
 — McCarthy (J.) *Modern leaders*. 1872. . . 3257.16  
 See also works on **Mormonism**, p. 94; and (*in Countries*) **Utah** and the **Mormons**.  
 YOUNG (Chas. Mayne, *Engl. tragedian*, b. 1771, d. 1856).  
 — Young (C. J.) *Memoir of*. 1871. . . 3187.26  
 — Same. [Abridged.] *Personal reminiscences*. Ed. by R. H. Stoddard.
- ZOROASTER. (*ancient Persian religious teacher*).  
 See his name, in general alphabet.  
 ZSCHOKKE (Johann Heinrich Daniel, *German author*, b. 1771, d. 1848).  
 — *Autobiography*. London, 1845. 8°. 3187.17  
 — Hedge (F. H.) *Prose writers of Germany* [2735.01]; *Dora d'Istria's Switzerland*, v. 1, p. 200–215.  
 ZWINGLI (Ulrich, *Swiss prot. reformer*, b. 1484, d. 1531).  
 — Blackburn (W. M.) *Ulrich Zwingli, the patriotic reformer*. 1863. . . . 3434.04  
 — Christoffel (R.) *Zwingli; or, the rise of the reformation in Switzerland*. 1858. . . . . 3434.10  
 — Hess (J. G.) *Life of*. 1812. . . . 3187.18  
 — Croly (G.) *Historical sketches*, p. 153–204. 1842. . . . . 2521.22  
 — Dora d'Istria (*Comtesse*). *Switzerland, etc.* v. 1, p. 240–308. . . . . 3434.02  
 — Taggart (E.) *Leading reformers 1843*. . . 3432.18  
 See also *Bibl. Sacra*, July, Oct., 1851; April, July, 1852 (*Life of Zuingli*, by R. D. C. Robbins); *Fraser's mag.*, v. 53, 1856, or *Littell*, v. 13, 1856; *North Brit. rev.*, v. 29, 1858; v. 49, 1868.  
 See also general works on the **Reformation**, (p. 99), by Merle d'Aubigné (*Books viii, xi, xvi*), and other writers; and histories of **Switzerland**.

NOTE.—Readers are reminded that the titles of works which are abbreviated in this class, under the names of their *subjects*, may be found more fully entered under the names of their *authors*, in the general alphabet.

## IV. EXAMPLES.

[Top of page 252.]

## CAMPS—CARACCIOLI.

- Camps and prisons. See Duganne (A. J. H.) 1865. . . . . 643.66  
 Camus (C. E.) *Treatise on the teeth of wheels*. From the French, by J. I. Hawkins. 3d ed. London, 1868. 8°. . . . . 3923.33  
 Canada. See **Countries**. (*Canada*).  
 Canals. See **Arts** (*Useful: canals*, p. 40).  
 Canary bird. See **Birds**, p. 217.  
 Canary Islands. See **Countries**. (*Canary Islands*).  
 Cancer. See **Medicine**. (*Cancer*).  
 Candidate; or the optimist. [In Voltaire. *Works*, v. 23.] . . . . . 5081.23  
 — Same. [In Voltaire. *Œuvres*, v. 33, 1834.] . . . . . 5083.33  
 Candle (Chemical history of a). See Faraday (M.). . . . . 4214.40  
 Candler (Robert S.) *Lectures on the book of Genesis*. 3 v. London, 1863. 16°. . . . . 3731.02  
 — *Life in a risen Savior*. Phila., 1858. 12°. . . . . 3527.15  
 by F. C. Hingeston. London, 1858. 8°. [**Rolls chron.**] . . . . . 5140.—  
 — *Chronicle of England*. [To 1417.] Ed. by F. C. Hingeston, L., 1858. 8°. [**Rolls chron.**] . . . . . 5140.—  
 Capital punishment.  
 — Akerman (J. Y.) "Furca et fossa!" a review of certain modes of capital punishment in the middle ages. [*Archæologia*, v. 38, 1860.] . . . . . 5128.—  
 — Armstrong (L.) *Signs of the times; tendency of efforts for the abolition of*. 1849. . . . . 5817.06  
 — Bovee (M. H.) *Christ and the gallows; reasons for the abolition of capital punishment*. 1869. . . . . 5817.04  
 — Burleigh (C. C.) *Thoughts on the death penalty*. 1845. . . . . 5817.10

## IV. EXAMPLES—Continued.

[Foot of page 253.]

- Past, present, and the future. Ph., 1848. 8°. . . . . 5913.04
- Principles of social science. 3 v. Ph., 1858. 8°. . . . . 5913.01
- Unity of law; in physical, social, mental, and moral science. Philadelphia, 1872. 8°. . . . . 5814.22
- Carey** (H. M.) Echoes from the harp of France. Caen, 1858. 24°. . . . . 1631.06
- Carey** (James P.) Record of the great rebellion; chronological. N. Y., 1865. 8°. . . . . 634.05
- Carey** (Matthew). Essays on political economy. Phil., 1822. 8°. . . . . 5932.13
- Contents:* 1. Addresses of the Philadelphia society for the promotion of national industry. 2. New olive branch: identity of interest between agriculture, manufactures, and commerce. 3. Address to Congress: ruinous consequences of a dependence on foreign markets. 4. Address to the farmers of the United States on the ruinous consequences of the existing [tariff]. Farmer's and planter's friend. Stilleure on Cambreleng's Examination of the new tariff.
- Letters to Adam Seybert, on the renewal of the charter of the bank of the U. S. 2d ed. Philadelphia, 1811. 8°. . . . . 5915.08
- Olive branch, or faults on both sides, federal and democratic. 3d ed. Boston, 1815. 16°. . . . . 5714.07
- Carlist revolts** See **Spain** (*Wars of succession*, 1826-40); **Carlism in Spain**, by J. W. Preston, Scribner, Dec. 1873. — **Carlos** (Don), in **Biography**, p. 128.
- Carlovingians**. See **Sismondi** (J. C. L. S. de). French under the C. [515-08]; and general histories of France, 752-987.
- Carlyle** (Joseph D.) Specimens of Arabian poetry. [With Arabic text.] Cam., 1796. sm. 4°. . . . . 1631.04
- Carlyle** (Thomas). Collected works. 30 v. London, 1870-71. 8°. . . . . 5027.01
- Contents:*
- |                              |   |
|------------------------------|---|
| 1. Sartor Resartus.          | 14-18. Cromwell's Letters and speeches. |
| 2-4. French revolution.      | 19. Latter-day pamphlets.               |
| 5. Life of Schiller.         | 20. Life of John Sterling.              |
| 6-11. Essays.                | 21-30. Frederick the Great.             |
| 12. Heroes and hero worship. |   |
| 13. Past and Present.        |   |
- Same. Index. London, 1871. 8°. . . . . 5026.21
- Critical and miscellaneous essays. Phila., 1852. 8°. . . . . 2517.12
- Contents:* Jean Paul Friedrich Richter. German literature. Life and writings of Werner. Goethe's Helena. Goethe. Burns. Life of Heyne. German playwright Voltaire. Novels. Signs of the times. Jean Paul Friedrich Richter. History. Luther's psalm. Schiller. Nibelungen lied. German literature of the xiv. and xv. centuries. German poetry. Characteristics. Goethe's portrait. Biography. Boswell's Johnson. Death of Goethe.

## V. EXAMPLES.

[Top of page 306.]

## C O U N T R I E S : Egypt.

## Egypt.

1. *Ancient History Religion, Science, Antiquities, etc.*
- Antiquities of E.* [anon.] L., 1841. 8°. . . . . 1075.11
- Beke** (C. T.) Complexion of the ancient Egyptians. [In **Royal soc. of lit. Trans.**, v. 3. 1839.] . . . . . 5068.03
- Birch** (S.) Ancient hist. from the monuments. Egypt to B. C. 360. . . . . 1091.27

*Freeman (E. A.)* The growth of the English constitution 1872. 5712.18  
*Genuine* and complete collection of the protests made in the House of lords, [1641 to 1747.] 2 v. Edin., 1748. 12s. 472.02  
*Hallam (H.)* Constitutional history of E., [1485-1760.] 1851. 5044.25  
*Leckie (G. F.)* Essay on the practice of the British government; distinguished from [its] abstract theory. 1817. (Pamphleteer. v. 10) 5053.11

## III.—NEW YORK APPRENTICES' LIBRARY CATALOGUE.

It is now generally admitted by librarians that a complete catalogue should give information as to the author, title, and subject of every book. It is also agreed that authors and titles can be exhibited in the most intelligible and satisfactory manner only by means of an alphabetical catalogue; but on the third point, that of the subject of the book, there is considerable diversity of opinion and practice. There are, however, two prominent schemes or methods to which all the plans proposed may be reduced, and these are, first, the systematic catalogue; and, secondly, the dictionary or alphabetical catalogue.

It is generally assumed by the partisans of each of these plans that each catalogue is complete in itself and adequate to supply all the information of the other. It is worth while, therefore, before examining the method of each catalogue, to ascertain whether there are not fundamentally different kinds of subjects, because, if this is so, it may turn out that each kind may need a different mode of treatment. This, as we shall see, is actually the case.

The objects upon which human knowledge is based, whether appertaining to the external world of the senses, or to the internal world of thoughts, can be viewed from two standpoints.

In the first place, each object may be viewed as complete in itself, as standing alone, or as a totality—as a concrete unit;

Secondly, objects may be viewed in their relation to other objects, or as parts of an abstract unit.

Now, it is evident that classification is nothing but the formation of abstract units, by abstracting from concrete objects characteristics they have in common and uniting them in groups or classes. Classification is, therefore, necessarily abstract, and demands for its exhibition an abstract method. If we then unite the different abstractions or classes in higher abstractions, and arrange the whole in the order of its various genera and species, we get a systematic scheme of all our abstractions or classes, and also a skeleton of the systematic catalogue, the plan of which we will now examine.

The systematic catalogue, as its name implies, divides the whole field of knowledge into a system of classes or departments, with subdivisions in each, the place of each division being fixed according to its greater or less degree of dependence or relation to other classes. All the books relating to a class are here brought together, and if the special student of any science or art wishes to know what there is in the library on his study, he has only to ascertain the whereabouts of his specialty in the general scheme to find all he needs brought together within the compass of a few pages, the whole arranged in the natural order of its various parts, and in close proximity to other related classes which often throw great light on the subject in hand. As most classed catalogues have prefixed a synopsis or index of the scheme of classification, it is not so

difficult a matter as has been represented to ascertain where to find a given class; and, assuredly, the great convenience of finding, at one glance, all one needs, counterbalances the small labor necessary in reading a brief synopsis, especially as any person of ordinary intelligence, after once mastering the scheme, can readily turn to any class he wants.

It is then quite clear that the sole function of the systematic catalogue is to indicate what books there are on certain classes, and to arrange these classes in systematic order. In a word, the information it gives is wholly general. Its method and principles being abstract, it cannot transcend its limits and exhibit individual topics which are concrete. These demand an altogether different and diametrically opposed mode of treatment.

If we wish to know, for instance, all there is in the library about such concrete objects as horses, plants, tobacco, iron, England, etc., we should be obliged, in a systematic catalogue, to look in numerous classes. And even if we knew exactly in which particular classes books on these topics were to be found, we should often need to read through all the titles of a class, because the classification being based on abstract principles, the subdivisions are necessarily abstract also, and seldom coincide, in name even, with individual objects. There is, then, but one course to pursue. There being no bond of union between individual topics when they are viewed as wholes standing alone, or as concrete units, it is necessary to arrange them in some arbitrary way in order to find them readily, and this can be best done by selecting the names of the individuals and placing them in alphabetical order, and when we have done this we have produced the second form of catalogue, namely, the dictionary or alphabetical catalogue of subjects.

In the dictionary catalogue the idea of classification is abandoned altogether, every subject being arranged under its most specific head according to the alphabetic order of its name. Class headings also appear, but they contain not a complete list of books thereon, but merely treatises on the class as a whole, or general works. In short, every heading is treated exhaustively, so far as it may be regarded as a whole, although classification itself is admitted to be foreign to the genius of this form of catalogue. Numerous cross references are introduced from one topic to a related one, or to subordinate topics, and this is supposed to be a sufficient substitute for classification. This, however, is a mistake. Classification, as has been shown, concerns itself only with abstract parts of objects, and for this reason, an object necessarily falls in numerous classes; the dictionary catalogue, on the contrary, views every subject as a concrete whole. It is not enough, therefore, to refer from the name of a class to the concrete objects comprised within it, because these belong in the class only under a certain aspect, and therefore a list of references under a class, say Botany, if followed out and the various headings were all arranged under one head, would not constitute a class list of botany, but would be a heterogeneous mixture of books from totally different classes. Again, supposing an inquirer could,

under each reference, select exactly what related to his particular class, what an interminable labor that would be, compared to the one reference in the systematic catalogue!

It is, therefore, evident that each form of catalogue is incomplete, or, rather, that each is complete as far as its limits allow it to go. Each is admirable in its way—the one for general information concerning classes, and the other for specific information concerning individuals. The method of the one is abstract and that of the other is concrete, and as both methods cannot be united without doing violence to the principles upon which each is based, and yet the information given by each is equally necessary, we must accept both as co-ordinate parts of one whole.

A perfect catalogue should, then, have two parts, the one systematic or classed, and the other alphabetical. The first part should contain a complete list of all the books, arranged in the order of classification, with subdivisions, which need not, however, be unnecessarily minute, as the purpose of this part is simply to give general information, and for the attainment of this end a few subdivisions are sufficient. There should be prefixed a synopsis of the scheme of classification, so that the place of each class can be readily found.

The second part, or alphabetical catalogue, should contain, first, a complete list of all the individual authors with their works in subalphabetical order; secondly, the titles of all such books as do not clearly indicate the subject treated of; thirdly, it should contain (1) individual subjects or topics, with lists of all the books thereon, whether stated in the title or only implied; (2) class headings may be introduced, but simply as references to Part 1, so that any one wishing to find a class in Part 1 could do so in two ways, first by means of the synopsis prefixed to Part 1, or, secondly, by referring to its name in Part 2; (3) cross references, as in the ordinary dictionary catalogue.

Some concrete topics, as England, America, and the names of countries generally would not need to have all the books relating to them brought under one view, because, in the first place, this would require considerable space, and, secondly, it would answer every purpose if in all cases, when a part of a concrete topic is also a subdivision of a class in the systematic division, a reference were made to Part 1. Thus if there were, in the first part, such subclasses as English History, English Language, etc.; there might appear in the alphabetical catalogue, under the heading England, such references as this:

ENGLAND: For *History*—See Class R. 1.

*Language*—See Class W. 2.

*Ecclesiastical History*—See Class Yc. 3.

If, however, there were no subclasses such as the foregoing in Part 1, a mere reference to the classes in which these subjects were included would not be sufficient; it would then be necessary to give a complete list of all the books on England.

The system thus briefly explained is carried out in detail, although in a somewhat crude form, in the Catalogue of the Apprentices' Library,

(September, 1874.) It is claimed for it that it answers all the possible and legitimate inquiries that can be directed to a catalogue, whether general or specific, in the shortest and most direct manner. If Professor Abbot's criterion for a good catalogue be admitted, namely, that "That is unquestionably the best catalogue which enables a person most readily and completely to ascertain what the library contains relating to the subject of his inquiry," the catalogue system here proposed may be safely tried by such a standard. For it certainly enables the inquirer to find what he wants "readily"—a single reference being sufficient, whether the information sought is general or specific—and "completely," since in all cases the subjects, whether concrete or abstract, contain all the books thereon in the library.

#### IV.—CATALOGUE OF ST. LOUIS PUBLIC SCHOOL LIBRARY.

The system of classification adopted in the Catalogue of the Public School Library of St. Louis is a modification of the Baconian plan for which the library is indebted to William T. Harris, LL. D., superintendent of public schools, and, *ex officio*, one of the managers of the library.<sup>1</sup> The main divisions and the method in which the minor classes are subordinated to the general heads, are shown in the following schedule:

##### SYSTEM OF CLASSIFICATION.

##### Main Divisions.

|                    |   |                                     |                        |
|--------------------|---|-------------------------------------|------------------------|
| Science..          | { | Social and political sciences . . . | Philosophy.            |
|                    |   |                                     | Theology.              |
|                    |   |                                     | Jurisprudence.         |
|                    |   |                                     | Politics.              |
|                    |   |                                     | Social science.        |
|                    | { | Natural sciences and useful arts .  | Philology.             |
|                    |   |                                     | Mathematics.           |
|                    |   |                                     | Physics.               |
|                    |   |                                     | Natural history.       |
|                    |   |                                     | Medicine.              |
| Art . . . . .      | { |                                     | Useful arts.           |
|                    |   |                                     | Fine arts.             |
|                    |   |                                     | Poetry.                |
|                    |   |                                     | Prose fiction.         |
| History . . . . .  | { |                                     | Literary miscellany.   |
|                    |   |                                     | Geography and travels. |
|                    |   |                                     | Civil history.         |
| Appendix . . . . . | { |                                     | Biography.             |
|                    |   |                                     | Polygraphs.            |
|                    |   |                                     | Cyclopædias.           |
|                    |   |                                     | Periodicals.           |

<sup>1</sup> An extended explanation and defense of Dr. Harris's system of classification will be found in the *Journal of Speculative Philosophy* for 1870, vol. iv, p. 114 *et seq.*

The foregoing classes are again divided into subclasses, numbered one to one hundred, which, in some instances, and, indeed, wherever desirable, are still more minutely subdivided. Thus, under Natural history, Class 50 is Zoölogy; 50 *a*, Vertebrates; 50 *a* 1, Mammals; etc.

Following is an example of subdivision in the above scheme, under History :

## HISTORY.

## GEOGRAPHY AND TRAVELS.

*Geography.*

- a*. Ancient.
- b*. Modern.

*Voyages.*

- a*. Circumnavigations.
- b*. Collections of Voyages.

*Travels in America.*

- a*. North America.
- b*. United States.
- c*. British America.
- d*. Mexico and Central America.
- e*. West Indies.
- f*. South America.

*Europe.*

- a*. British Islands.
- b*. France and Netherlands.
- c*. Switzerland (and Alps) and Italy.
- d*. Germany.
- e*. Denmark, Sweden, Norway, and Iceland.
- f*. Russia and Poland.

*Asia at Large.*

a. British India.

b. China and Japan.

*Historical Miscellany.*

a. Costumes and Iconology.

b. Crusades.

c. Wars and Campaigns.

d. Secret Societies.

## BIOGRAPHY.

a. Collections and Dictionaries of.

b. Individual Biography.

c. Correspondence.

d. Genealogy and Heraldry.

Great diversity of opinion has long existed among librarians as to the practicability of a philosophical scheme of classification for the arrangement of books. After five years of trial, the system adopted in the Public School Library continues to commend itself for the readiness with which it imparts to the users of the library the information they may desire by bringing together, under one or two heads, all the books likely to throw light upon the subject of their investigation. In this particular is claimed its superiority over the so-called subalphabetical or dictionary system, as a glance at the synopsis of classification will at once indicate to the reader where to look for the class in which he may be sure to find all the works or references to works relating to the matter of which he is in quest.

## CHAPTER XXIX.

### ON INDEXING PERIODICAL AND MISCELLANEOUS LITERATURE.

---

BY PROF. OTIS H. ROBINSON,  
*Librarian of the University of Rochester.*

---

NECESSITY AND VALUE OF INDEXES—NO COMPLETE PRINTED INDEX TO PERIODICALS—  
CARD INDEX—DESCRIPTION OF THE PLAN IN USE BY THE AUTHOR—CARE REQUIRED  
IN PREPARING INDEXES—"FANCY" TITLES—SUGGESTIONS FOR CO-OPERATION AMONG  
LIBRARIES.

It is clearly the duty of a librarian so to conduct his library that everything it contains shall be accessible to every reader, and that with as little inconvenience as possible. It is often asked, How many books have you? or, Have you a fund for the purchase of books? Would it not be equally pertinent to ask, What means have you adopted to make your books most useful? Until this question is answered the working power of no library can be correctly estimated.

In a college library especially it is important that as little effort as possible be required of the reader. This is true chiefly because here a majority of the readers are likely to be persons of so little experience, and such slight knowledge of the value of books, that they are willing to make but very little effort to find what their highest interest requires them to read. And besides, in a college library the readers are not only learning what and how to read, but they are also learning, some of them at least, how to consult a library—how to find in it all it contains of value on a given subject. This is by no means an insignificant part of a student's education, and every facility should be afforded to make it attractive and easy.

With special reference to this work we may divide the books of a library into two general classes, as follows:

I. Books which are continuous throughout on the same subject, or on kindred subjects; as biographies, histories, etc.

II. Books which are made up of parts not closely related to each other; as cyclopædias, dictionaries, periodicals, essays, etc.

Of the first class, the titles form, or ought to form, a sufficient general index to the contents, so that a well prepared catalogue is all that is required. The second class may be subdivided into:

a. Books whose parts are arranged on a well understood plan; as cyclopædias, chronological tables, etc.

b. Books which are composed of parts on widely different subjects, and arranged on no definite plan; such as magazines, collections of essays or lectures, etc.

The former of these subclasses consists strictly of works of reference, and must be within the reach of readers for consultation at all times. No special device is necessary to make their contents accessible.

Of the second class we may say that their titles give no clew to what they contain, so that a catalogue avails little or nothing; nor can one easily hunt up a given subject in them, for lack of order among their parts.

The value of the last class of books mentioned, especially to a student, can hardly be overstated. In these days men of learning are pushing their investigations in every direction. The results of these investigations knock imperatively at every college door. College faculties are often at their wits' end to decide how far the old, time honored curriculum shall give place to modern researches. The tendency, I think, is to make the regular course cover all that is new by lectures supplementary to the old. This makes an extraordinary demand upon the time and strength of student as well as teacher. It is desirable that a student be as good a linguist and mathematician to-day as was the college student one hundred years ago, and at the same time that he acquire a fair knowledge of chemistry, and geology, and zoölogy, etc., of which such student never dreamed. And, besides, he must be up to date in the ever increasing practical applications of what is learned in theory. In short, the field of study is rapidly widening, while the period allotted to student life remains nearly the same. What is demanded, therefore, is knowledge in nut shells. There is no time to waste. The classical student needs the mature essays of Arnold and Hadley to settle forever the questions which arise in his reading and help him in forming a correct classical taste; the student of science cannot do without the lectures and fragments of Helmholtz, and Herschel, and Tyndall; and both must have the reviews, and magazines, and reports of learned societies without stint. I would say nothing to disparage extended courses of general reading, but this work of supplementing a college course during the period of student life must be largely done by the use of monographs.

Besides the circumstances of the student, the character of this class of books also commends them. Everybody knows that the best productions of many of the ablest scholars of to-day appear in the form of essays and magazine articles. The tendency toward this style of writing is increasing. It is known that a two or three hour article will be read while a volume would not be touched. The monthly and quarterly are also coming to be almost the sole place for the first scientific statement of discovery. They are therefore the most convenient means of studying the history of discovery and opinion—and, I might also add, general

history — during that most difficult period which lies between the ephemeral newspaper and the well written volume.<sup>1</sup>

But the practical value of books depends largely upon the facility with which they may be used. I have said that when the titles of books do not clearly suggest their contents, a general catalogue is of little use in finding what they contain on a given subject. Suppose that in a library of 20,000 volumes there are 2,000 of this class, and that they contain, on an average, five valuable essays to a volume, you have then 10,000 essays, or half as many as there are volumes in the library, whose value is far above the average of the library. Every reader knows that these 2,000 volumes, or 10,000 essays, contain something on nearly every subject he wishes to investigate, but how shall he make them give down what they contain on any particular subject? I remember, when a college student, spending many a leisure hour looking through the tables of contents of these books, volume by volume, and noting the volume and page of such as came within the range of my study. Tedious though it was to spend my reading hours in this way, I was recompensed. It is especially unpleasant to one making such a search to feel that, however far he has gone, the very next volume may contain what is to him more valuable than all he has found; or to look through whole sets of books for some half-forgotten essay and fail to find it at all. Until, therefore, these books are properly indexed, readers are subjected to a vast waste of time or to the loss of their use altogether. The great majority will choose to suffer the loss.

Where there is such a demand, one naturally looks for a supply of printed indexes, with supplements kept carefully up to date. But he looks in vain. The only comprehensive general index to periodical literature is that prepared by Mr. Poole, at the Boston Athenæum Library. That was published more than twenty years ago, and is now out of print. I know of no general index to the vast number of literary and scientific papers which have been bound into volumes with such titles as *Miscellaneous Essays*, *Reports of Learned Societies*, etc. Mr. Poole has been urged to complete the supplement to his index, which he began some years ago, and which he is so well qualified to make, but other duties so press upon his time that he gives no encouragement that he will be able to do anything further in this direction. And, besides,

---

<sup>1</sup> Since writing the above I have accidentally met with the following, from the report for 1871 of the librarian of the Mercantile Library Association of San Francisco. It is so clear and pointed that I cannot resist making a note of it.

"A thorough collection of the periodical literature of the day constitutes a part of every library of note, acknowledged to be the most important and useful. Its value in a public library cannot be overestimated. It offers the student an epitome of all history, science, and art in the past and a continuation of the same in every department, even to the present day. It contains the latest improvement or advance in science, the freshest turn of thought. With a completion of Poole's *Index to Periodical Literature* to date, the searcher after knowledge would have, in a complete magazine collection, a store of information inexhaustible and in worth beyond all computation."

the great barrier to a complete printed index, continued from year to year, is that it would not pay. Every library needs, and needs very much, an index to its own books of the class described, but the libraries are too few, and the wants of nearly all too far below the maximum to warrant publishers in keeping a general index up to date. Moreover, should this be done, the annuals would soon become so numerous as to make their consultation inconvenient, to say the least.

Next to a continuous catalogue, every library needs a continuous index. Where printing immediately is not contemplated, the card system is rapidly coming into use for the catalogue. After quite an extensive correspondence on the subject, I think no single plan has been generally adopted for the index. The general expectation among librarians seems to be that somebody will publish a general index. Various plans have been tried by private individuals and by librarians, but none, so far as I know, is free from serious faults. Two requirements must be met—ease of continuation, not by supplements, but the new always in alphabetical order with the old, and convenience of reference. For the simple purpose of alphabetical continuation, the card system is doubtless the best for either catalogue or index; but for convenience of reference it is far behind the best. Every one who has used a card catalogue knows that the inconvenience of turning the cards one by one with his finger-ends upon their edges, especially when pressed for time, is a serious obstacle to their use. What is wanted is the form of a book, that the leaves may be slipped easily and rapidly between the thumb and fingers, and the titles or references always stand out plain to the eye.

The plan I have adopted is designed to meet both the requisitions mentioned above, provision being made, however, for the insertion of new references, not from day to day, but only once or twice a year. My plan was matured and my old index copied and put into working order in the new form in the summer vacation of 1873. It then contained not far from ten thousand references. It proved so convenient and useful the following year, both to students and other readers, that, when the vacation of 1874 came, I inserted in it the titles of the articles of every valuable book of the class mentioned in the library. It now contains little less than fifteen thousand references, or more than the number of volumes in the entire library. The facility with which it can now be kept up to date will appear below.

The universal favor with which it has been received, together with numerous suggestions that it ought to be more widely known, has induced me to prepare the following description of it.

Its general appearance is that of a number of volumes in manuscript lying about three-fourths open in a case so constructed as to have a place set apart for each volume. The volumes are arranged in alphabetical order and fastened in the case. The case is screwed to its place so as to be a fixture in the library, where it is easily accessible to all.

The volumes, which appear to be well bound as they lie in the case, are really only tied together firmly with binder's thread. With this arrangement it is easy to cut them apart, insert the new references in proper order, and tie them up again, once or twice a year. The following diagrams will serve for a more detailed description of the several parts and their uses.

FIG. 1.

Let Fig. 1 represent the form of the leaves on which it is written. Their size is 8 inches by 5½. They are ruled on one side with nine lines to the page, with a cross rule one inch from the right edge. This margin is required for the tying, and is punched, as represented by the dots, the holes in each pair being about half an inch apart. Only those subjects are put upon a page which have the same first or leading word. A large part of most of the pages is, therefore, left blank for future entries. I have found the most convenient mode of indexing to be, first to draw off the titles or subjects on small slips of paper, one title on a slip, then arrange these in alphabetical order preparatory to copying. When the index has once been begun very many of the new slips which are prepared from year to year can be copied on the pages already started. New pages are always to be started for those subjects which have new leading words. As the volumes are cut apart into loose leaves at the time the copying is done, the new pages so started can be arranged in alphabetical order with the old before tying up again, reference being had only to the first word. Revisions and corrections can also be attended to at the same time.

The covers of the volumes are prepared with special reference to their adjustment to the case, from which they are never removed except for the periodical addition of new matter. Suppose Fig. 1 to be enlarged a little each way, and it will fairly represent one side of a cover. The sides are made separate and connected by a strap, as shown hereafter. This half-cover terminates in a flexible morocco margin which is punched to correspond with the leaves so as to be tied together with them. The margin is made wide enough to leave a flexible section or joint above the tie.

Fig. 2 represents a strong morocco strap, nearly as wide in the middle as the covers, and punched to correspond with them. The distance, *a*

*b*, between the sets of holes near the middle is two or three inches, according to the thickness of the book to be bound. The ends are about two-thirds as long, from *b* to *c*, as the covers, and punched so as to be suspended on fixed pins in the case, as shown at *r s*, Fig. 6.

FIG. 2.

The two sides of the cover are now sewed to this strap along the lines of the corresponding holes and the cover is complete.

FIG. 3.

Fig. 3 gives an outline view of the back of the cover when finished, the strap being laid upon the two sides and sewed along the dotted lines.

FIG. 4.

Fig. 4 gives a sectional view of the cover when the book is closed and placed upon its back. Covers can be prepared in this form by any binder at a small expense, and will last a lifetime.

From two to four hundred leaves can be clamped within a cover with an ordinary clamp, and the whole sewed or tied firmly in a few minutes. To stiffen the volume when so bound, and to protect the leaves from being injured by the thread, narrow brass plates, represented in Fig. 5, are

FIG. 5.

placed outside the cover. The thread being drawn several times through at each end, and tied while the book is clamped, will hold these plates firmly against the sides of the volume, and form altogether a pretty strong binding. The principal objection to this whole plan would seem to be the necessity of rebinding or retying once or twice a year. My experience, however, is that, with no special facilities, one can tie them up at the rate of three volumes in an hour, which makes the work too trifling to be considered. Your compensation is that you have your

index in the convenient form of a book, and all in alphabetical order up to date, without separate supplements.

FIG. 7.

FIG. 6.

Fig. 7 represents a book as bound; below it, (Fig. 6,) is a vacant section of the case. The opening,  $cd$ , is somewhat larger than the thickness,  $ab$ , (see Fig. 2,) of the book. The ends of the morocco strap,  $mn$ , are now slipped through narrow slits,  $op$ , Fig. 6, in the inclined boards of the case, and fastened underneath on the pins,  $rs$ . The book then lies partly resting on the boards and partly suspended by the strap, as rep-

FIG. 8.

resented in Fig. 8. The inclination of the boards and the space,  $cd$ , Fig. 6, between them are such as to allow the book to lie open far enough for convenient use, or to be closed at pleasure on either side, while the strap still holds it loosely in its place.

The case is constructed as follows: For a single row of the volumes two boards are cut of the form  $ab$ , Fig. 8. Between these the inclined boards which support the books are fitted by inserting them into grooves or furrows,  $mn$ ,  $op$ , cut for the purpose. These long boards form the front and back of the case, the books lying loosely between them, just low enough to secure their protection. When the index is large enough to require eight volumes or more, the case should be made for two or three rows; otherwise the length may be inconvenient. No lid is required, as the books may be closed for protection against dust when necessary.

Fig. 9 represents one of the cases I am now using, containing twelve volumes arranged in two rows. Each volume contains about two hundred leaves, the spaces in the case being large enough, however,

FIG. 9.

to contain them easily when they shall have grown to twice that size. The brass plates and threads, and all the binding are entirely out of sight beneath the case, so that the whole presents a neat appearance. The references are written on the left side only, as represented in Fig. 1; the leading or catch word is thus always first in view as the leaves are turned.

To make this description complete, it should be added that the references to periodical literature are made in the usual way, by an abbreviation of the title, the number of the volume, and the page. But the references to the volumes of miscellaneous literature require either a special device or the copying of somewhat long titles a great many times. To save this copying and to condense the size of the index the following plan has been adopted: The titles of the volumes are numbered and written in full with their numbers once for all, in a bold hand, on a large card which is suspended over the case. The references are then made by writing two numbers after the subject of the article, one the number of the volume on the card, the other the page of the article. I have now three hundred volumes numbered on my card. This device simplifies the work, condenses the index, and prevents mistakes to such an extent that were I to begin the whole work *de novo* I should be inclined to adopt it for all the books indexed.

When the covers of the books are once prepared and the index has been begun, the work of keeping it up in any ordinary library is neither long nor difficult. It may properly be divided, however, into two parts; the preparation of the slips from an inspection of the articles or essays to be indexed, and the copying of them and arranging and retying of the volumes. The latter requires no special preparation or skill, but may be done by any careful assistant. The preparation of the slips, on the other hand, requires the most careful attention of one who has had experience with books. He must decide upon the leading or principal word of the title, and the best condensed form of it, without hesitation; he must determine what titles should be repeated under different catch-words, and what articles should be rejected as worthless; he must be able to run his eye over the book notices in the leading reviews, and select here and there one which amounts to a brief review, omitting the rest; and, what is most difficult of all, he must be able to make titles and substitute them for a vast number of fancy titles which would be meaningless in an index. Think of a valuable historical article on steam navigation, written for one of the British quarterlies at the time the Great Eastern was launched, as indexed under its fancy title, Triton (The) and the Minnows; or, of a long article in the North American Review at the close of the war, reviewing the Rebellion Record, as indexed Scotch the Snake or Kill It, or Snake, Scotch or Kill it. Some writers have a fancy for such taking titles, and the indexer must be able to reject them promptly, and substitute whatever his own judgment dictates.

Mr. Poole says in the preface to his index, "My practice has been to

ignore entirely all previous indexes and tables of contents; and, after an inspection of the article, and, if necessary, its perusal, to refer to it by that title under which I supposed the reader would be most likely to look for it."

In concluding this paper, I may be allowed a suggestion as to the co-operation which is possible among librarians in this work of indexing. We may suppose that the most important of the periodical and miscellaneous literature is added about as soon as published to nearly all of the libraries of the country, and the less important to many. Now, as the principal expense of keeping a running index to this regular accession is in the skilled labor of preparing the slips before copying, this work should be done once for all. Let some librarian who receives about all of this kind of literature that is worth indexing, carefully prepare all the titles fit for an index, and keep them on hand. Copies could then be made, at a trifling expense, of such portions as any other librarian might order. One general indexer might thus be paid for great thoroughness, with but little expense to the several libraries receiving the titles from him. In whatever form any librarian might choose to keep his index, this would greatly facilitate the preparation of the materials for the final alphabetical copy. Some might have copies made upon thin slips, suitable for pasting into blank books prepared for the purpose. Others might prefer to have the titles copied upon cards of uniform size, and fit to be arranged in a case, in the form of a card catalogue, or to be mixed with the cards of their catalogue. These would be much cheaper modes than the one I have adopted, as described above, but in other respects much less satisfactory. Still other modes of converting the indexer's titles into an index will readily occur to any librarian who considers it a little; and I think every one would realize that the great difficulty of keeping a running index was overcome as soon as he could purchase, at reasonable rates, copies of such well prepared titles.

## CHAPTER XXX.

### BINDING AND PRESERVATION OF BOOKS.

---

BY A. R. SPOFFORD,  
*Librarian of Congress.*

---

IMPORTANCE OF THE SUBJECT—COLLATION OF BOOKS—MATERIALS FOR BINDING—  
WORKMANSHIP—STYLES OF BINDING—HASTE TO BE AVOIDED—MAPS, CHARTS,  
AND PLATES TO BE MOUNTED—RESTORATION OF OLD BOOKS—PRESERVATION OF  
ANNOTATIONS AND AUTOGRAPHS—TREATMENT OF PAMPHLETS.

Next to the selection and utilization of books, there is no subject more important in the administration of a public library than the binding and preservation of the volumes. Carelessness or neglect of the work in these points will subject any collection of books to danger and deterioration which may end in the loss of many volumes. However large or small a library may be, it should be a part of the duty of its custodian to go carefully through the collection at frequent intervals, take out the books needing repairs or rebinding, and to see to it that none is damaged beyond recovery before the proper remedy is applied.

Coincident with this duty should be the careful examination of each book returned from the hands of readers before it is replaced upon the shelves. Many libraries are filled with imperfect books, from which plates or leaves are missing, having fallen out by the wear and tear of the volumes, and carelessness or some worse abuse on the part of readers. This mischief should, of course, be watched and arrested at the threshold, and no library should be made the victim of the joint carelessness of its officers and the public. No rules for the collection of fines or the replacement of damaged books are of any value unless regularly and systematically enforced; and this can be done only by a cursory examination, at least, of each volume as it is returned from the hands of the reader.

Equally essential is it to good library management that every book acquired by purchase or otherwise be carefully collated before being catalogued or placed upon the shelves. Missing signatures, misplaced leaves, or abstracted plates and maps are of extremely common occurrence in any lot of books purchased or newly received from whatever quarter. Such imperfections can be detected only by a thorough collation, page by page. In the case of recent publications wanting in leaves or illustrations, the publishers are bound to supply the imperfection free of charge. In the case of books which are out of print, it is usually

impracticable to repair imperfections; and, in such cases, the book should be returned to the seller, and another copy procured; unless in special cases the work is a rare one, and the imperfection of small consequence in comparison with the cost and the importance of the book to the library. A successful and economical repair of such deficiencies, of course, depends upon the promptitude with which reclamations are made; and without prompt and thorough attention to this matter, making it a rule to collate every volume on receipt, a library runs the risk of becoming filled with imperfect books, which may become quite as annoying to readers as the total absence of the volumes themselves.

While this is no place for a treatise on the history or the art of book-binding, a few practical suggestions on the best methods of utilizing this art for the preservation of library collections seem to be appropriate. And, first, as to the material to be employed in covering books. The combined experience of librarians establishes the fact that leather binding only can be depended on for any use but the most ephemeral. All books bound in boards or cloth inevitably come to pieces after a few readings. While reasons of economy may dictate the propriety of leaving some books of reference, and the mass of volumes in any department which are but little read, in their original cloth binding, it is necessary to provide all the books which are really much used with a more solid and permanent covering. In doing this, the problem is how to combine durability and elegance with economy in expenditure. It is a false economy to employ cheap binders, who will always slight their work in order to underbid competition. To save a few cents on a volume, librarians will sometimes hazard the much greater cost of having books rebound a second time; and each rebinding seriously deteriorates every volume which is subjected to the process. The cheapest binding is that which is done to last, and the most expensive that which the soonest comes to pieces in the hands of the reader. An inexperienced librarian who accepts the lowest bid for rebinding a lot of books is served with inferior leather, the thinnest spongy boards instead of solid tar, cheap sewing-thread, inferior glue, imitation gold-leaf, and other devices resorted to by every mechanic who has to make a cheap job pay. Nowhere are the effects of the reign of shoddy, which infests every art and manufacture, more lamentable than in the book-binders' art. The sacrifice of all comeliness, solidity, and taste in binding is less injurious than the increased expense entailed by imperfect work. A book which comes from the binder in a half-pressed, spongy, and speedily-warping condition, with rough corners, irregular trimmings, wrinkles, imperfectly-secured plates, half-sewn or starting leaves, and similar imperfections, is on the high road to destruction, if not effectually ruined by the process it has undergone. On the other hand, a book which has been correctly treated will have a solid and even shape and feeling, with the leather of the corners smoothly pared, the back firm and well rounded, the head evenly trimmed, the leaves opening freely and uni-

formly in all parts, and the lettering on the back clear and straight. To pay 25 per cent. additional, or even more, for such binding, and be assured of thorough and conscientious work, from the cardinal point of the sewing of the volumes to the last touch of the finisher, is wise economy in the end.

While nearly all books published on the continent of Europe are issued to the public in paper or printed covers, in England and America they are almost universally published in muslin bindings, the English style being uncut as to margins, while in this country the book is usually trimmed all around before the cloth binding is put on. The muslin covers being made in part by machinery, and all in one piece, are attached to the book only by a narrow guard of paper or cloth, liable to tear away at the first severe handling. Books bound in leather, on the other hand, being first carefully sewed and backed to secure the tenacity of the leaves, are firmly laced to the boards which form the cover by the twine or cords to which the leaves are sewn. The leather being then placed over all, if of the proper texture and durable quality, will insure the preservation of each properly-bound book for centuries, even with frequent, if reasonably careful, use or reference.

The quality of the leather used in binding is of cardinal importance. What passes under the name of morocco leather is commonly only colored sheepskin, soft, and easily worn out, with a tendency to become rough and lose its artificial coloring on being handled. Genuine Levant morocco is expensive, but it is the only leather likely to give permanent satisfaction on books which are to be continually handled. Calfskin, which is very largely used in book binding, although it has the merit of a smooth and elegant appearance, is open to fatal objections. The leather is brittle and always breaks at the joints, the question of its deterioration being only one of time. In most libraries the books bound in calf or half-calf are continually being sent to the binder for repairs. The heavier volumes bound in this material frequently break by their own weight in standing on the shelves, while those subject to frequent opening break all the sooner. Moreover, calf bindings, especially light calf, are much more easily stained or soiled than any others, while the smoothness of the leather renders them peculiarly liable to scratches, thus quickly ruining the primitive elegance of their appearance. For these reasons it is bad economy to bind any book in calf for a public library, however it may be with private ones. Russia leather, although stronger than calf, has the same liability to break at the joints, while the idea that its peculiar odor affords any protection against worms, is a delusion. Perhaps nothing need be said of "leatherette," or other shoddy substitutes for leather and cloth, which have recently come in vogue among the votaries of cheap binding. They are, one and all, made of paper, and are stiff, brittle, and sure of breaking at the joints even more quickly than calf, so that the use of them for a public library would be a most costly economy.

As to the color chosen for bindings, it has been found that all morocco leathers, green, blue, maroon, etc., turn a dingy black after a few decades. The only permanently fast color for leather is said to be red, the dye being made from the cochineal insect. The objection that the binding in red is too gaudy or showy for the shelves of a public library may be answered by the statement that the mass of every large collection, being composed of the older literature, will always be of calf or other dark-colored bindings. The majority of the more recent books, also, or the literature of the current century, which are kept in their original bindings, are in dark-colored muslin. If the books which come to be rebound, and the new acquisitions requiring it, are all bound in red morocco, therefore, and distributed, as they will naturally be, with the related books in each department of the library, they will serve to light up and relieve agreeably the otherwise too sombre appearance of the collection. Of course the exceptions may be numerous to binding uniformly in this color; and works in theology, science, etc., may very properly be dressed in black morocco, which will not turn any dingier than its native color in the progress of time. No arbitrary rule should be laid down, though it may be noted that the authorities of the British Museum Library have adopted a classification of colors, by which historical books are bound in red, theological in blue, poetical in yellow, books of natural history in green, etc. As nearly all libraries are lighted by gas, the chemical effects of which are very injurious to books, it may be added that calf and Russia-leather suffer most from the products of gas combustion, and morocco least of all.

Comparatively few books need be bound in full leather, even in a library largely used, though all books of incessant reference, like the more popular encyclopædias and dictionaries, should be fully bound in the strongest and most durable leather. The mass of books, if bound in genuine half-morocco, with cloth sides, will stand well a prolonged use. Those less frequently used may safely have marbled paper sides, but leather corners should be insisted upon for all but the thinnest volumes.

The binder should not be permitted to cut any book closely. A simple shaving taken off the head to render the leaves smooth for handling, leaving the other margins uncut, is the best treatment. The prime requisites of good binding are durability and neatness, and to these both ornament and false economy should be sacrificed. Gilding is quite unnecessary in the books of a public library, except for the mere lettering, or titles. Morocco looks well with what is termed blind-tooling, or blank finish, and the money spent in extra stamps, fillets, or embossing would be better applied in securing thorough sewing and "forwarding," or fastening in the leather covers. This branch of the bookbinder's art furnishes the true test of durable work. Too much hurry in binding books is a waste, as no book can be well bound unless it is given ample time to dry and press thoroughly after each process. Freshly-bound books should be reserved from use for at least three weeks, and

firmly pressed on shelves till they are so dry as not to warp upon exposure. All maps and plans in books should be mounted on cambric, or other thin cloth. The plates in large volumes should be secured by being mounted on guards, and such volumes should be kept in drawers or on sliding shelves, as if placed upright they suffer inevitable injury. The mounting of maps on paper, and patching with cloth at the folds, are ruinous expedients. Folding maps and plates are invariably torn and ruined if not thoroughly protected. In binding periodicals, the covers should be carefully preserved and bound at the end of each volume; thus preserving what is frequently valuable historical material, and supplying the means of fixing the date, price, etc., of each number. All half-titles, known as "bastard titles," should be preserved and bound in, while prospectuses of other publications or miscellaneous advertising sheets may be rejected, in binding any book, as extraneous matter. Old books in original binding should be restored rather than rebound, preserving as far as possible the characteristic features of the primitive binding. For the same reason, annotations and autographs should generally be preserved, as they frequently elucidate the history or contents of the volume, or identify it with a former possessor.

Every librarian should give special personal attention to the lettering of books. Binders are rarely qualified to discriminate the proper titles to be placed on a book, especially those in foreign languages, and the time and money expended on full, accurate, and well arranged lettering will save much time and trouble in after use to readers and librarians alike. The date and place of publication should in all cases be the last lettering on the back, and collective works should have some indication of the contents of each volume of the set supplied in its lettering.

The binding of pamphlets is a mooted point in all libraries. While the British Museum and the Library of Congress treat the pamphlet as a book, binding all separate, this is deemed in some quarters too vexatious and troublesome, as well as needlessly expensive. It must be considered, however, that the crowding of a heterogeneous collection of pamphlets into a single cover is just as objectionable as binding together books on unrelated subjects. Much time is consumed in finding the pamphlet wanted among a dozen or more that precede or follow it, and, if valuable or much sought for pamphlets are thus bound, many readers may be kept waiting for some of them, while one reader engrosses the volume containing all. The loss of one, moreover, entails the loss of all bound with it; whereas if kept separate the loss would have been reduced to a minimum. Pamphlets may be lightly bound in paste-board, stitched, with cloth backs, at a cost varying from 8 to 12 cents each;<sup>1</sup> and the compensating advantage of being able to classify them like books upon the shelves should weigh in the decision of the question. If many are bound together, they should invariably be assorted

---

<sup>1</sup> This cost, however, will hardly include lettering.

into classes, and those only on the same general topic should be embraced in the same cover. The reports of societies and institutions, annual catalogues, etc., should be bound in chronological series, with five to ten years in a volume, according to thickness. Libraries which accumulate many bound volumes of pamphlets should divide them into series, and number them throughout with strict reference to the catalogue. There will thus be accumulated a constantly increasing series of theological, political, agricultural, medical, scientific, etc., pamphlets, while the mass, which cannot be thus classified, may be designated in a consecutive series of volumes as *Miscellaneous Pamphlets*. When catalogued, the title page or beginning of each pamphlet in the volume should be marked by a thin strip of unsized paper projected above the top of the book, to facilitate future reference. In all cases the contents of each volume of pamphlets should be briefed in numerical order upon the first fly-leaf of the volume, and its corresponding number written on the title page of each pamphlet.

Readers should never be permitted the vulgar and deleterious practice of folding down the corners of leaves—*i. e.*, making “dog’s-ears”—or of wetting the fingers in turning over the pages of a book. All writing upon margins should be visited with the penalty of exclusion from library privileges. Under no circumstances should a book be left open, face downward. Never crowd books too closely upon the shelves. There should always be room for every volume to slip easily past its neighbors. Turning books downward upon the fore-edge is another injurious practice, which deteriorates the solidity of the binding. When uncut books must be brought into use in a library, they should always be prepared for the readers by the paper-knife, as otherwise the leaves will be subject to the hazard of being torn and gouged by impatient fingers past all remedy, except the barbarous expedient of cutting off all the margins when the book is bound.

## CHAPTER XXXI.

### PERIODICAL LITERATURE AND SOCIETY PUBLICATIONS.

---

BY A. R. SPOFFORD,  
*Librarian of Congress.*

---

SOCIETY PUBLICATIONS—PERIODICALS AND PAMPHLETS—COMPLETE FILES SHOULD BE KEPT—ARRANGEMENT—NEWSPAPERS—THEIR NUMBER—TENDENCY TO DESTRUCTION—PRESENT AND FUTURE VALUE—COLLECTION OF M. DE LA BEDOYÈRE—LOCAL LIBRARIES SHOULD PRESERVE FILES OF LOCAL PAPERS AND PAMPHLETS—SCRAP-BOOKS—REVIEWS AND MAGAZINES—REPORTS, PROCEEDINGS, AND TRANSACTIONS OF SOCIETIES—INDEXES TO SCIENTIFIC JOURNALS—THE EXCHANGES BY THE SMITHSONIAN INSTITUTION—A VALUABLE COLLECTION OF PAMPHLETS RELATING TO ENGLISH HISTORY.

Within the world of books which every public library contains, and forming frequently a large and important department, come periodicals and pamphlets. These include, not only newspapers and political and literary journals of all kinds, but the transactions, proceedings, reports, and other publications, whether regular or occasional, of societies, libraries, governments, and their numerous subdivisions, together with the whole vast farrago of publications that swarm from the press of all nations, and do not form systematic works or books devoted to a special topic. This mass of publications, which it would be a misuse of terms to call minor literature, is sometimes described under the general head of *ephemera*. The correctness of such a classification may be doubted, since these publications, and especially those of governments and scientific institutions and societies, frequently contain monographs of great value and completeness, to which the application of the term “ephemeral” would be a misnomer. At the same time the fact that most of these publications appear serially, or else, as in the case of pamphlets, contain but a few leaves of print, removes them for certain purposes from the category of distinctly printed works, and requires a special treatment at the hands of librarians.

Whether a public library be large or small, its value to students will depend greatly upon the care and completeness with which its selections of periodical works are made and kept up from year to year. Nothing is more common in all libraries, public or private, than imperfect and partially unbound sets of serials, whether newspapers, reviews, magazines, or the proceedings and reports of scientific societies, libraries, charities, government and municipal publications, etc. Nothing

can be more annoying than to find the sets of such publications broken at the very point where the references or the wants of those consulting them require satisfaction. In these matters perpetual vigilance is the price of completeness; and the librarian who is not willing or able to devote the time and means requisite to complete the files of periodical publications under his charge is to be censured or commiserated according to the causes of the failure. The first essential in keeping up the completeness of files of ephemeral publications, next to vigilance on the part of their custodian, is room for the arrangement of the various parts, and means for binding with promptitude. Some libraries, and among them a few of the largest, are so hampered for want of room that their serials are piled in heaps, without order or arrangement, and are thus comparatively useless until bound. In the more fortunate institutions, which possess adequate space for the orderly arrangement of all their stores, there can be no excuse for failing to supply any periodical, whether bound or unbound, at the moment it is called for. It is simply necessary to devote sufficient time each day to the systematic arrangement of all receipts; to keep each file together in chronological order; to supply them, for the perusal of readers, with a proper check or receipt, and to make sure of binding each new volume as fast as the publication of titles and index enables it to be done properly. While some libraries receive several thousands of serials, the periodical publications taken by others amount to a very small number; but in either case the importance of prompt collation and immediate supply of missing parts or numbers is equally imperative. While deficiencies in daily newspapers can rarely be made up after the week, and sometimes the day, of their appearance, the missing parts of official and other publications, as well as of reviews and magazines appearing at less frequent intervals, can usually be supplied within the year, although a more prompt securing of them is often necessary. In these publications, as in the acquisitions of books for any library, the collation of each part or number is imperative, in order to avoid imperfections which may be irreparable.

First in the ranks of these ephemeral publications, in order of number if not of importance, come the journals of all classes, daily and weekly, political, literary, scientific, illustrated, professional, mechanical, agricultural, financial, etc. From the obscure and fugitive beginnings of journalism in the sixteenth century to the establishment of the first continuous newspapers—the London Weekly News, in 1622, and Renaudot's Gazette, (afterwards the Gazette de France,) in 1631, followed by the issue of the first daily newspaper, the London Daily Courant, in 1702, and the Boston Weekly News Letter, in 1704, (the first American journal,)—to the wonderful fecundity of the modern periodical press, which scatters the leaves of more than fifteen thousand different journals broadcast over the globe, is a long and interesting history of the trials and triumphs of a free press. In whatever respect American libraries may fall behind those of older lands, (and their deficiencies are vast, and,

in many directions, permanent,) it may be said with confidence that in the United States the newspaper has received its widest and most complete development. Numerically, the fullest approximate return of the newspaper and periodical press gives a total number of 7,870 periodical publications regularly appearing within the limits of the United States.<sup>1</sup> The largest number of periodicals printed in any country of Europe is in Great Britain, where a total of 2,252, including newspapers, reviews, magazines, etc., were issued in 1875.<sup>2</sup> In the same year France had 1,559 newspapers and periodicals, Germany 1,985, and Italy 935.

While no one library, however large and comprehensive, has either the space or the means to accumulate a tithe of the periodicals that swarm from a productive press, there are valid reasons why more attention should be paid by librarians to the careful preservation of a wise selection of all this current literature. The modern newspaper and other periodical publications afford the truest, the fullest, and, on the whole, the most impartial image of the age we live in that can be derived from any single source. Taken together, they afford the richest material for the historian, or the student of politics, of society, of literature, and of civilization in its various aspects. What precious memorials of the day even the advertisements and brief paragraphs of the newspapers of a century ago afford us! While in a field so vast it is impossible for any one library to be more than a gleaner, no such institution can afford to neglect the collection and preservation of at least some of the more important newspapers from year to year. A public library is not for one generation only, but it is for all time. Opportunities once neglected of securing the current periodicals of any age in continuous and complete form seldom or never recur. The principle of selection will, of course, vary in different libraries and localities. While the safest general rule is to secure the best and most representative of all the journals, reviews, and magazines within the limits of the fund which can be devoted to that purpose, there is another principle which should largely guide the selection. In each locality it should be one leading object of the principal library to gather within its walls the fullest representation possible of the literature relating to its own State and neighborhood. In every city and large town the local journals and other periodicals should form an indispensable part of a public library collection. Where the means are wanting to purchase these, the proprietors will frequently furnish them free of expense for a public use; but no occasion should be lost of securing, immediately on its issue from the press, every publication, large or small, which relates to the local history or interests of the place where the library is maintained. This collection should embrace not only newspapers, magazines, etc., but a complete collection of all casual pamphlets, reports of municipal governments, with their subdivisions, reports of charitable or benevolent socie-

<sup>1</sup> Rowell's American Newspaper Directory, 1875.

<sup>2</sup> Newspaper Press Directory, London, 1875.

ties, schools, etc., and even the prospectuses, bulletins, catalogues, etc., of real-estate agents and tradesmen. Every library should have its scrap-book (or series of them) for preserving the political broadsides and fugitive pieces of the day which in any way reflect or illustrate the spirit of the times or the condition of the people. These unconsidered trifles, commonly swept out and thrown away as worthless, if carefully preserved and handed down to the future, will be found to form precious memorials of a by-gone age. How many pages of our modern philosophic historians are illuminated by traits of character and manners derived from these ephemeral handbills, broadsides, ballads, and other forgotten "rubbish" of the centuries that are gone.

While the files of the journals of any period furnish unquestionably the best instruments for the history of that epoch, it is lamentable to reflect that so little care has ever been taken to preserve a fair representation of those of any age. The destiny of nearly all newspapers is swift destruction; and even those which are preserved commonly survive in a provokingly fragmentary state. The obvious causes of the rapid disappearance of periodical literature are its great volume, necessarily increasing with every year, the difficulty of lodging the files of any long period in our narrow apartments, and the continual demand for paper for the uses of trade. To these must be added the great cost of binding files of journals, increasing in the direct ratio of the size of the volumes. As so formidable an expense can be incurred by very few private subscribers to periodicals, so much the more important is it that the public libraries should not neglect a duty which they owe to their generation as well as to those that are to follow. These poor journals of to-day, which everybody is ready to stigmatize as trash not worth the room to store or the money to bind, are the very materials which the man of the future will search for with eagerness, and for some of which he will be ready to pay their weight in gold. These representatives of the commercial, industrial, inventive, social, literary, political, moral, and religious life of the times should be preserved and handed down to posterity with sedulous care. No historian or other writer on any subject who would write conscientiously or with full information can afford to neglect this fruitful mine of the journals, where his richest materials are frequently to be found.

As a single instance of the value to the historical stores of a public library of this ephemeral literature, it may be noted that the great collection of printed matter, mostly of a fugitive character, relating to the French Revolution, gathered by the late M. de la Bedoyère, amounted to 15,500 volumes. Fifty years of the life of the wealthy and enthusiastic collector, besides a very large sum of money, were spent in amassing this collection. With an avidity almost incredible he ransacked every book-shop, quay, and private shelf that might contribute a fresh morsel to his stores; and when Paris was exhausted, had his agents and purveyors busy in executing his orders all over Europe.

Rival collectors, and particularly M. Deschiens, who had been a contemporary in the revolution, and had laid aside everything that appeared in his day, only contributed at their decease to swell the precious stores of M. de la Bedoyère. This vast collection, so precious for the history of France at its most memorable period, contained several thousand volumes of newspapers and ephemeral journals, and was acquired in the year 1863 for the National Library of France, where it will forever remain a monument to the enlightened and far-sighted spirit of its projector.

The life-long devotion of a late American collector, Peter Force, of Washington, to the same historical spirit, resulted in amassing a large and rich library of manuscripts, newspapers, books, pamphlets, maps, broadsides, etc., mainly illustrative of American history. This invaluable collection, which no amount of money could have re-assembled, was fortunately not permitted to be scattered, but was secured, during the lifetime of the possessor, for the Library of the United States.

In the absence of a great library of journals, or of that universal library which every nation should possess, it becomes the more important to assemble in the various local libraries all those ephemeral publications, which, if not thus preserved contemporaneously with their issue, will disappear utterly, and elude the search of future historical inquirers. And that library which shall the most sedulously gather and preserve such fugitive memorials of the life of the people among which it is situated will be found to have best subserved its purpose to the succeeding generations of men.

Not less important than the preservation of newspapers is that of reviews and magazines. In fact, the latter are almost universally reckoned as far more important than the more fugitive literature of the daily and weekly press. Though inferior to the journals as historical and statistical materials, reviews and magazines supply the largest fund of discussion upon such topics of scientific, social, literary, and religious interest as occupy the public mind during the time in which they appear. More and more the best thought of the times gets reflected in the pages of this portion of the periodical press. No investigator in any department can afford to overlook the rich stores contributed to thought in reviews and magazines. These articles are commonly more condensed and full of matter than the average books of the period. While every library, therefore, should possess for the current use and ultimate reference of its readers a selection of the best, as large as its means will permit, a great and comprehensive library, in order to be representative of the national literature, should possess them all.

The reports, proceedings, and transactions of institutions and societies, whether scientific, historical, commercial, literary, or philanthropic, also present materials of the first importance to the student. Embodying as they do the last result of the thought or investigation of scientific men, each of whom has made a special field of inquiry his own, these publi-

cations supply what will be vainly sought for in the older literature upon the same topics. Two invaluable indexes to the vast range of papers printed in scientific journals and transactions have been given to the world. Reuss's *Repertorium commentationum a societatibus literariis editarum*, published at Göttingen, A. D. 1801-21, covers, in sixteen quarto volumes, this occasional literature of learned societies from the beginning to the present century. This is a topical index. The Royal Society of London has completed in six large quarto volumes a *Catalogue of Scientific Papers*, published from A. D. 1800 (where Reuss's *Repertorium* stops) to 1863, in the transactions of societies, as well as in journals and other periodical works. This gives the contents of nearly 1,400 serial publications devoted to science, in a single alphabet by authors' names, with the reference, date, and number of pages in the memoir, and is to be followed by a classed catalogue, covering the same ground, in an alphabet of subjects. The Smithsonian Institution has rendered an incalculable service to the scientific development of this country through its broad and liberal system of exchanges with learned societies throughout the world. The fruits of these exchanges, so far as represented in printed books and serials, are now deposited in the Library of Congress, or of the United States, at Washington. They are there accessible to all readers, and, consisting as they do of the publications of more than two thousand societies and institutions without the limits of the United States, besides nearly all American societies which print their transactions or proceedings, they afford a rich repository of scientific results, continually increasing, for the reference and use of American scholars.

Of the multitudinous literature of pamphlets it is not necessary to speak at length. Suffice it to say that the library which neglects the acquisition and proper preservation and binding of these publications is far behind its duty both to its own generation and to those which are to follow. The pamphlet literature of every period furnishes often the most precious material to illustrate the history and development of that period. The new ideas, the critical sagacity, the political controversies, the mechanical and industrial development, the religious thought of many epochs find their best expression in the pamphlets which swarm from the press. The fact that multitudes of these productions are anonymous does not detract from their value as materials for the student. As one illustration of this value, take the Thomason collection of pamphlets of the period of the civil war in Great Britain. An indefatigable bookseller named Thomason sedulously collected and laid aside every scrap or book which appeared from the press from A. D. 1649 to 1660, the period of the interregnum in the English monarchy represented by Cromwell and the Commonwealth. This vast collection, numbering over 20,000 pamphlets, bound in 2,000 volumes, after escaping the perils of fire and of both hostile armies, was finally purchased by the King and afterward presented to the British Museum Library. Its completeness is one

•

great source of its value, furnishing, as it does, to the historical student of that most interesting revolution the most precious memorials of the spirit of the times, many of which have been utterly lost except the single copy preserved in this collection. Several great European libraries number as many pamphlets as books in their collections. The Royal Library of Bavaria, at Munich, has 400,000, largely consisting of theses or discussions of special topics by the candidates for degrees in the universities. Pamphlets, from their peculiar style of publication and the difficulty of preserving them, tend to disappear more quickly than any class of publications except newspapers and broadsides or hand-bills. They are far less likely to be preserved in the hands of private holders than reviews and magazines. Multitudes of pamphlets are annually lost to the world from the want of any preserving hand to gather them and deposit them permanently in some library; so much the more important is it that the custodians of all our libraries should form as complete collections as possible of all pamphlets, at least, that appear in their own city or neighborhood. How to do this is a problem not unattended with difficulty. Pamphlets are rarely furnished for sale in the same manner as books, and when they are, booksellers treat them with such indignity that they are commonly thrust aside as waste paper almost as soon as they have appeared from the press. If all the writers of pamphlets would take pains to present them to the public libraries of the country, and especially in their own neighborhood, they would at once enrich these collections and provide for the perpetuity of their own thought. A vigilant librarian should invite and collect from private libraries all the pamphlets which their owners will part with. It would also be a wise practice to engage the printing-offices where these fugitive leaves of literature are put in type to lay aside one copy of each for the library making the collection. The preservation and binding of pamphlets, a question not without practical difficulty, is elsewhere treated in the present volume.

## CHAPTER XXXII.

### WORKS OF REFERENCE FOR LIBRARIES.

---

BY A. R. SPOFFORD,  
*Librarian of Congress.*

---

CATALOGUES INSUFFICIENT—REFERENCE BOOKS NEEDFUL—THEIR RELATIVE VALUE—  
PRINCIPLE OF SELECTION—BOOKS MOST USEFUL SHOULD BE READILY ACCESSIBLE  
TO READERS—THE EXAMPLES OF THE BRITISH MUSEUM AND LIBRARY OF CONGRESS—  
CATALOGUE OF REFERENCE BOOKS.

Public libraries are useful to readers in proportion to the extent and ready supply of the helps they furnish to facilitate researches of every kind. Among these helps a wisely selected collection of books of reference stands foremost. Considering the vast extent and opulence of the world of letters, and the want of experience of the majority of readers in exploring this wide and almost boundless field, the importance of every key which can unlock any portion of its hidden stores becomes apparent. The printed catalogue of no single library is at all adequate to supply full references even to its own stores of knowledge, while these catalogues are, of course, necessarily useless as to other sources of information elsewhere existing. Even the completest and most extensive catalogue in the world, the manuscript catalogue of the British Museum Library, although now extended to more than 1,600 folio volumes, is not completed so as to embrace the entire contents of that rich repository of knowledge in a single alphabet. For lack of information of the aid furnished by adequate books of reference in a special field, many a reader goes groping in pursuit of references or information which might be readily found in some one of the many volumes which may be designated as works of reference. The diffidence of many students in libraries, and a mistaken fear of giving trouble to librarians, frequently deprives them of even those aids which a few words of inquiry might bring forth from the ready knowledge of the custodians in charge.

That is the best library, and he is the most useful librarian, by whose aid every reader is enabled to put his finger on the fact he wants just when it is wanted. In attaining this end it is essential that the more important, recent, and valuable aids to research in general literature and science, as well as in special departments of each, should form a part of the library. In order to make a fit selection of books—and all libraries are practically reduced to a selection, from want of means to possess

the whole — it is indispensable to know the relative value of the books concerned. Many works of reference of great fame, and once of great value, have become almost obsolete through the issue of more extensive and more carefully edited works in the same field. While a great and comprehensive library should possess every work of reference, old or new, which has aided or may aid the researches of scholars, not forgetting even the earlier editions of works often reprinted, the smaller libraries on the other hand are compelled to exercise a close economy of selection. The most valuable works of reference, among which the more copious and extensive bibliographies stand foremost, are frequently expensive treasures, and it is important to the librarian furnishing a limited and select library to know what books he can best afford to do without. If he cannot buy both the *Manuel du libraire*, of Brunet, and the *Trésor des livres rares et précieux*, of Graesse, both of which are dictionaries of the choicer portions of literature, it is important to know that Brunet is the more indispensable of the two. From the 20,000 reference books lying open to the consultation of all readers in the great rotunda of the British Museum reading room, to the small and select case of dictionaries and other works of reference in a town or subscription library, the interval is indeed wide. But where we cannot have all, it becomes the more important to have the best; and the reader who has at hand for ready reference the latest and most copious dictionary of each of the leading languages of the world, two or three of the best general bibliographies, the most copious catalogue raisonné of the literature in each great department of science, the best biographical dictionaries, and the latest and most copious encyclopædia issued from the press, is tolerably well equipped for the prosecution of his researches. Collateral helps of all kinds will be perpetually unfolded as he proceeds. No book that treats upon the subject that engages him but will supply hints or references to other sources of information; and the whole world of knowledge is so related that all roads may be said to cross and converge, like the paths which carry the explorer over the surface of the globe on which we live.

Next in importance to the possession in any library of a good selection of the most useful books of reference, is the convenient accessibility of these works to the reading public. Just in proportion to the indispensability and frequency of use of any work should be the facility to the reader of availing himself of its aid. The leading encyclopædias, biographies, and dictionaries of reference should never be locked up in cases, nor placed on high, remote, or inaccessible shelves. There should be in every library what may be termed a central bureau of reference. Here should be assembled, whether on a circular case made to revolve on a pivot, or on a rectangular case, with volumes covering both sides, or in a central alcove forming a portion of the shelves of the main library, all those books of reference and volumes incessantly needed by students in pursuit of their various inquiries. Out of 1,100,000

volumes belonging to the British Museum Library, every reader has instant access, without tickets or formality, to 20,000 books of reference, arranged in convenient classes by subject matters on the shelves of the reading room, where all pursue their studies. For any of the remaining million and more of volumes the reader must present his tickets to the library attendants, who produce the books from whatever portion of the vast and widely distributed domain of letters they occupy. This superior accessibility of so large a library of reference books is of all others the most popular and appreciated feature of that liberally managed institution, the British Museum. In the Library of Congress, or of the United States, at Washington, a good selection of reference books, comprising all the leading encyclopædias, biographical dictionaries, classical, genealogical, and scientific glossaries, dictionaries of dates, of languages, etc., is placed on shelves in an accessible portion of the main library, while the rest of the 300,000 volumes it contains are stored in alcoves, which are under lock and key, and must be applied for, as in most extensive libraries, by the ticket system. This supply of reference books would be greatly extended if room were attainable. It is important that the custodians of all libraries should remember that this ready and convenient supply of the reference books most constantly wanted serves the double object of economizing the time of the librarian and assistants for other labor, and of accommodating in the highest degree the reader, whose time is also economized. The misplacement of volumes which will thus occur is easily rectified, while the possibility of loss through abstraction is so extremely small that it should not be permitted to weigh for a moment in comparison with the great advantages resulting from the rule of liberality in aiding the wants of readers.

These leading works of reference should not be permitted to be taken out, even in a library of circulation, but should be at once available at all hours to public use and reference.

#### LIST OF THE PRINCIPAL BOOKS OF REFERENCE IMPORTANT TO BE USED IN LIBRARIES.

[NOTE.—The specially useful manuals, among many of more or less value, are marked by an asterisk in the list. The abbreviation v. stands for volume.]

##### Architecture.

\* *Fergusson (J.)* History of architecture in all countries from the earliest times to the present day. 2d ed. 4 v. 8°. London, 1874-75.

*Gwilt (J.)* Encyclopædia of architecture. New ed. Revised by W. Papworth. 8°. London, 1867.

\* *Mitchell (T.)* Rudimentary manual of architecture. History and explanation of the principal styles, ancient, mediæval, and renaissance, with glossary. 12°. London, 1870. •

##### Architecture.

*Nicholson (P.)* Architectural dictionary. 2 v. 4°. London, 1854.

*Parker (J. H.)* Glossary of terms used in architecture. 5th ed. 3 v. 8°. Oxford, 1850.

*Stuart (R.)* Dictionary of architecture, historical, descriptive, topographical, etc. 3 v. 8°. London, 1846.

*Viollet-Le-Duc (E. E.)* Dictionnaire raisonné de l'architecture française du 11<sup>e</sup>-16<sup>e</sup> siècle. 10 v. 8°. Paris, 1858-68.

**Architecture.**

- \* *Weale (J.)* Rudimentary dictionary of terms used in architecture. 12°. London, 1876.

**Art.** See **Fine Arts.**

**Bible.** See **Theology.**

**Bibliography and Literature.**

*General.*

- Botta (A. C. L.)* Handbook of universal literature. 12°. New York, 1860.

- \* *Brunet (J. C.)* Manuel du libraire et de l'amateur des livres. 5<sup>e</sup> éd. augmentée d'un tiers par l'auteur. 5 v. 8°. Paris, 1860-61.

- Bure (G. F. de).* Bibliographie instructive; ou, traité de la connoissance des livres rares et singuliers. 7 v. 8°. Paris, 1763-68.

- Cailleau (A. C.) and Duclos (—).* Dictionnaire bibliographique, historique et critique. 4 v. 8°. Paris, 1790-1802.

- Darling (J.)* Cyclopædia bibliographica: a manual of theological and general literature. 2 v. 8°. London, 1854.

- Denis (F.) Pinçon (P.) et Martonne (G. F. de).* Nouveau manuel de bibliographie universelle. 8°. Paris, 1857.

- Ebert (F. A.)* General bibliographical dictionary, from the german. 4 v. 8°. Oxford, 1837.

- Graesse (J. G. T.)* Trésor des livres rares et précieux; ou, nouveau dictionnaire bibliographique. 6 v. 4°. Dresde, 1861-67.

## CHAPTER XXXIII.

### LIBRARY MEMORANDA.

---

BY JUSTIN WINSOR,  
*Superintendent Boston Public Library.*

---

EPHEMERA—BINDING—REFERENCE BOOKS—LIBRARY STATISTICS.

#### EPHEMERA.

The librarian of a great library largely escapes that choosing between books necessarily imposed on those in charge of smaller collections. The larger the available income for the purchase of books, the less distracted he is in making choice of them. Everything will come in use sooner or later in a large collection, as everybody expects to find everything on the shelves. No selection can, therefore, be wholly amiss. But the perplexity most commonly arising with the lesser libraries is that of the preservation and storing of what are usually denominated *ephemera*. For a given bulk the labor which must be bestowed on pamphlets, broadsides, scraps, etc., to render them of any use in a library—assorting, cataloguing, binding, etc.—is vastly greater than for books; and, as labor is money, and as money should be made to go as far possible in a library, there is no reason why ordinary libraries should give any of their resources to this end, except so far as the matters to be preserved are of local interest. These they should care for by all means, as the community which they serve, presently and prospectively, has a right to expect of them. A few great libraries in the country, the chief one in each principal geographical section, should do this work, and they should open an exchange account with each other, say, in our country, the Boston Public Library for New England; the State Library at Albany perhaps for the Middle States, or the Library Company at Philadelphia; the Library of Congress for the whole country, and particularly for those remoter sections where there is no large library to look out for their preservation; the public libraries of Cincinnati or Chicago for the West; and the San Francisco Mercantile for the Pacific Coast. The lesser collections will do the best thing for the future historical investigator, if they will make regular contributions into the larger repository of all such grist as may come to their mill, so that it can there be cared for and rendered available for use by indexing of one kind or another. The cost of this work is large, and the chief libraries should by all means provide for it. A great mistake would be made if the present

outlay is compared with the present advantage. The experience of the Old World libraries shows how material of this sort, which would have cost little to accumulate at the time, is now beyond recovery, or is obtained at prices that are appalling; and these prices are given because of the real value of this material for history. Ephemera are the best reflex of the times which saw their first issue, and we cannot read Macaulay, for instance, without seeing the legitimate use which an historian can make of them. It should be remembered that unless the chief libraries make it a part of their business to preserve these things, the work is not done at all. Societies notoriously neglect the preservation of their annual reports. The United States Government and its departments are without complete files of their important documents. Perhaps not a State in the Union can show a full collection of its own printed records. Cities and towns are almost always deficient in this way, and what collections they have are often at the hazard of a fire in the town clerk's sitting room. The States should compel by law the sending of every town document to the State libraries and to one other large library in their section of the country. Librarians cannot do better than make occasional collections illustrating important anniversaries in their neighborhood, preserving for such purpose everything that has passed through the press — books, pamphlets, newspapers, broadsides, prints, and also manuscripts, the originals of addresses, poems, etc., photographs, music — in fact everything which at the next recurring anniversary will have interest; and there is little that a hundred years will not enhance in value.

#### BINDING.

In the matter of binding, it cannot be too strongly impressed upon a librarian's notice that he should acquire something of an expert's knowledge of the binder's art. There are a great many tricks in all trades, and a binder's has its full share of them. There are mud-board, and sham leather, and false gold, gluing instead of sewing, and twenty other devices that can be practiced upon a librarian ignorant of such matters, so that his books will not last and future cost will be incurred. Cheap binding is often dear binding. Strong sewing, real leather, and solid board are worth paying for.

By all means let large libraries bind in with their periodicals, as well as with pamphlets, their original covers. Matter of real importance is preserved in this way, and the color of the covers forms convenient marks on the book's edge for clearly indicating the successive numbers. Books issued in parts should have the covers for the parts bound at the end, preserving all of them if they vary. Many an important question has been settled by such covers. It increases the expense somewhat, but the large libraries should incur it. It is not worth while for the smaller libraries to do it.

In binding pamphlets, bind important ones singly; but the general

mass can be bound in groups, either subjects or authors. Never bind them in miscellaneous collections.

Foul air and an air heated and vitiated by gas light are very detrimental to binding, but genuine morocco stands the best. Calf is handsome for a private collection, but unsuited for a public library; it dries and cracks very easily. There is no propriety in a public library of putting on full binding, except in rare instances nor much tooling on the backs. If books are found by shelf numbers, the lettering on the back should be as brief as possible; put the author's name at the top and the title below it, with a dash between.

The cost of labor and material makes binding in this country at the present time very costly, and orders should be given to European agents to bind all books before shipment. If the time might be spared, books could, indeed, be sent to Europe for binding at less cost by one-half than they can be bound for here, and yet pay freight and insurance both ways.

If binders can be found who understand the working of it, half parchment binding gives variety to the shelves, costs less than morocco, is very durable, and answers every purpose for books not much in use. At all events, see that the binder protects and strengthens the corners of all the books with a bit of parchment wrapped about the angle beneath the paper. For this purpose parchment scraps can be bought by the pound from the principal stationers.

Remember, also, that money is saved by rebinding before the book gets so far gone that the inner edge of the leaves has become torn or worn and cannot be properly sewed over.

It is always best for a public library that books which are issued in loose sheets in covers or portfolios should be bound. Much risk of loss of parts is thereby avoided.

#### REFERENCE BOOKS.

In the matter of reference books, all libraries should be well supplied, and no hesitancy should be felt in repeating the book in newer editions, as issued. Ask librarians who have had experience what the selection is that they have found best.<sup>1</sup> An important library should have all the great encyclopedias; a library with restricted means is compelled to choose. Every library should afford Chambers's, and if it can get another, let it be Appleton's. The latter, without Chambers's, strengthens the references to American subjects; but Chambers's is by no means a superfluity alongside of Appleton's (new edition) large work. Webster's Unabridged is the best dictionary, even for Worcesterians, in orthography—since it offers the user his choice in this respect, and is much superior in all others. Guides to courses of reading are inadequate, since the wants of no two people are alike; but of helps of this kind an intelligent reader will avail himself in his own way; consequently provide them, and also a sufficiency of maps and tables of statistics.

<sup>1</sup> For a list of works of reference for libraries, see Chapter XXXII, pp. 686 *et seq.*

## LIBRARY STATISTICS.

There is no branch of library economy more important, or so little understood by a librarian as helps to himself, as the daily statistics which he can preserve of the growth, loss, and use (both in extent and character) of the collection under his care. The librarian who watches these things closely, and records them, always understands what he is about, and what he accomplishes or fails to accomplish. The patrons to whom he presents these statistics will comprehend better the machinery of the library, and be more indulgent toward its defects. The methods employed in the library, of course, determine in large measure what kinds of statistics are desirable and what are possible. Some systems, like a slip system for recording loans, for instance, will yield results, and important ones, which it is impossible to get under a ledger system, or if gotten are attainable only by labor which costs too much. It is all important that the nature and future of a library should be well understood at the beginning, and that its system should be devised to yield the desirable statistical results. If it is not so devised, it is very difficult to engraft a change upon its radical methods at a subsequent period. For this reason, however desirable it would be to procure uniformity in library statistics throughout the country, there is little chance of its ever being accomplished.

## CHAPTER XXXIV

### TITLES OF BOOKS.

---

BY PROF. OTIS H. ROBINSON,  
*Librarian University of Rochester.*

---

NAMING BOOKS — ENIGMATICAL AND MISLEADING TITLES — MISCELLANIES — EXPLANATORY, OBSCURE, INCOMPLETE, AND UNSUITABLE TITLES — HINTS TO READERS — IMPROVEMENT IN TABLES OF CONTENTS AND IN INDEXES — A LIBRARY MANUAL.

The subject of this paper might well be entitled Enigmas; a friend has suggested Sphinxiana, which is perhaps better. And yet the comparison is not perfect; for the poor librarian has no oracle to assure him that, should he guess the meaning of the titles now published, the monster who propounded them will dash her head against a rock and expire. No sooner has he studied out one batch than another is issued, with which in turn he has to struggle without hope of coming to an end.

No act of a man's life requires more practical common sense than the naming of his book. If he would make a grocer's sign, or an invoice of a cellar of goods, or a city directory, he uses no metaphors; his pen does not hesitate for the plainest word. He must make himself understood by common men. But if he makes a book the case is different. It must have the charm of a pleasing title. If there is nothing new within, the back at least must be novel and taking. He tortures his imagination for something which will predispose the reader in its favor. Mr. Parker writes a series of biographical sketches, and calls it *Morning Stars of the New World*. Somebody prepares seven religious essays, binds them up in a book, and calls it *Seven Stormy Sundays*. Mr. H. T. Tuckerman makes a book of essays on various subjects, and calls it *The Optimist*, and then devotes several pages of preface to an argument, lexicon in hand, proving that the applicability of the term *optimist* is "obvious." An editor, at intervals of leisure, indulges his true poetic taste, for the pleasure of his friends, or the entertainment of an occasional audience. Then his book appears, entitled not *Miscellaneous Poems*, but *Asleep in the Sanctum*, by A. A. Hopkins. Sometimes not satisfied with one enigma, another is added. Here we have *The Great Iron Wheel*; or, *Republicanism Backwards and Christianity Reversed*, by J. R. Graves.

These titles are neither new nor scarce, nor limited to any particular class of books. Every case, almost every shelf, in every library con-

tains such. They are as old as the art of book making. David's lamentation over Saul and Jonathan was called *The Bow*. A single word in the poem probably suggested the name. Three of the orations of Æschines were styled *The Graces*, and his letters *The Muses*.

"Were it inquired of an ingenious writer," says Disraeli, "what page of his work had occasioned him most perplexity, he would often point to the title page." No one will question this. The remote reference of title page to contents must often have been discovered only by the severest effort. Were the perplexity to stop with the "ingenious writer," the latter might indulge his fancy in that direction unmolested. But what say the reader, the librarian, the catalogueur?

The books whose titles give special trouble to the reader, and generally to the librarian also, may be classified under several heads.

1. First of all are the miscellanies. These are miscellaneous essays, reports of societies, and all periodicals, whether scientific or literary; also biographical sketches, with remains of essays, speeches, correspondence, scientific papers, and the like. Of this class of books good titles can only be general, from the nature of the case. All that can be asked is that where it is practicable such qualifying words be used as will suggest the general department of learning to which the contents belong. How much better is *Familiar Lectures on Scientific Subjects*, by Sir John F. W. Herschel, than *Conférences faites à la gare Saint-Jean à Bordeaux*, the two books being on almost the same class of subjects.

2. Secondly are those books which are strictly miscellaneous, but whose authors or publishers were not content to have them so called. Of these are many to which the name of one essay is given, the others falling under a general "and other essays."

De Quincey's *The Avenger* is bound up by the publishers with several other essays, including the one on China. *The Avenger* occupies seventy-four pages, China one hundred and twenty-two, and yet China is hidden under the title *The Avenger*, etc. Roger's *Reason and Faith and Other Miscellanies* is a volume of four hundred and fifty-eight pages, one hundred and twenty on reason and faith, the rest being on Thomas Fuller, Pascal, Luther, sacred eloquence, etc. Hawthorne's *Snow-Image*, and other twice-told Tales has twenty-two pages on the *Snow-Image* and two hundred and thirty-eight devoted to fourteen other essays.

In this class are also to be included the books which are put forth under some distinguished name connected with the subject or subjects written upon.

A new book by Dr. William Forsyth, though not strictly miscellaneous, will serve as an illustration. The back of the book says, *Hortensius, the Advocate*. Within, a preliminary title page contains "*Hortensius, or the Advocate*." Go further, and you find on the title page proper, *Hortensius*, an historical essay on the office and duties of an advocate. Now, if you read the book you find a series of essays on the

Athevian courts, advocacy in ancient Rome, the bar in the Middle Ages, advocacy in England, etc., and that Hortensius serves not even as the central figure of the book, but only as a title.

To these may be added a great many fancy general titles, from which it is difficult to draw any inference as to the contents. *Recess Studies*, edited by Alexander Grant, and published in 1870, is found to be a collection of essays or papers by different authors on the existing condition of Great Britain and Ireland, political, social, and religious. *A Free Lance in the Field of Life and Letters*, by W. C. Wilkinson, consists of critical examinations or reviews of the writings of George Eliot, James Russell Lowell, William Cullen Bryant, and others. *Paradoxes and Puzzles*, historical, judicial, and literary, by John Paget, consists of reviews of passages in Macaulay's History, vindications of Nelson, Byron, and others; an examination of the cases of Elizabeth Canning, Spencer Cowper, and others; also some essays on art, with reviews of Rubens, Ruskin, and Cruikshank. The back of the book gives simply *Paradoxes and Puzzles*, by John Paget. One would naturally, therefore, classify it with *De Morgan's Budget of Paradoxes*, which is a collection of scientific scraps, mostly mathematical, thrown together without order, like scraps in a rag bag. After *Paradoxes and Puzzles*, it is natural to mention *Guesses at Truth*, by two brothers. This is put up in the same manner. Let no one suppose, however, that the guesses of one have any reference to the puzzles of the other. *Chips from a German Workshop*, by Max Müller; *Tablets*, by A. B. Alcott; *Dreamthorp*, essays written in the country, by Alexander Smith; and *My Study Windows*, by James Russell Lowell, may be added without remark. Let it be understood, parenthetically, however, that Professor Lowell "would have preferred a simpler title, but publishers nowadays are inexorable on this point."

Of the two classes of books already mentioned, no reader should expect to find the contents except by means of a general index, alphabetically arranged. The fault of a fancy title is, not that it conceals material which would otherwise be easily found, but that it often suggests a particular treatise, while the contents are miscellaneous. That it is practicable for a librarian to keep a general alphabetical index of contents of such books may be seen by reference to the article in this volume on that subject.<sup>1</sup>

3. We mention, as a third class, books on particular subjects, whose titles are wholly and inexcusably enigmatical. *The Past, the Present, and the Future*, by H. C. Carey, a treatise on social science, has no word suggesting its nature till you come to the table of contents. *Social Pressure*, by Arthur Helps, is still worse, for it has no preface nor table of contents. *Berkeley's Alciphron*; or, *the Minute Philosopher*, is a double enigma. You find little comfort even in chasing down the first

<sup>1</sup> See Chapter XXIX, On Indexing Periodical and Miscellaneous Literature, pp. 663 *et seq.*

word in a dictionary of biography. The *Oceana* of James Harrington, and The *Leviathan* of Hobbes, are said, by those who have read them, to be on nearly the same subject. An explanatory clause in the title of the latter relieves one a little after he has taken the pains to hunt it up. Tooke's *Diversions of Purley* is a marvel of obscurity. It would puzzle us more to divine its nature from its title than it did the reviewers of its day to determine its rank among works on the English language. The *Blazing Star*, by Greene, just published, sheds no light on the contents of the book. The *Voices of the Night* and *Voices of the Day*, by the Rev. John Cumming, were evidently selected because they sounded well together. A careful study of their prefaces shows that they are a collection of sermons relative to the present and the future state of the people of God. Walter Colton's *Deck and Port, Land and Lee, and Ship and Shore*, belong to the same class. *Leaves of Grass* would be well enough for Walt Whitman's book were it not that the title *Leaves of Grass* has a definite meaning.

4. Another class of books differs from those last mentioned in the addition of an explanation or suggestion to the principal title. Berkeley's *Siris* is explained as on *The Virtues of Tar Water*. A recent book is announced as *The Rise and the Fall; or, The Origin of Moral Evil*. Another, still more recent, is *Seed Truths; or, Bible views of mind, morals, and religion*, by Pharcellus Church. Would it not have been well for Dr. Church to have given his "views" simply, and let the public judge whether they contained "seed truths?" Voltaire's *Essai sur les Mœurs* was abandoned by the English publishers, who gave to Mr. Nugent's translation the true title, *An Essay on Universal History, etc.* The *Sons of the Sires*, is a spirited title surely, though one is at a loss to know what sons or what sires, till he reads on and finds that the book professes to give *A History of the rise, progress, and destiny of the American Party*. The *Mysteries Opened* is a work on the nature of baptism, and of the Lord's supper. The *Cradle of Rebellions* is on secret societies. The *Day Star of American Freedom* is on toleration in the province of Maryland. Here we have *The Poetry of Science* by Hunt, the *Poetry of the Vegetable World* by Schleiden, and *The Magic of Science* by Wylde, which contain neither poetry nor magic, but simply some elementary lessons in the physical sciences. Ruskin's works are destined to live in our language and to be sought after in our libraries for many a year, but we cannot forgive him the trouble he has given to the thousands who will have to get below their titles to find out what they are all about. The *Crown of Wild Olive*, on work, traffic, and war; *Unto this Last*, on the first principles of political economy; *Sesame and Lilies*, on Kings' treasures and Queens' gardens; *The Queen of the Air*, on the Greek myths of cloud and storm; *Ariadne Florentina*, on engraving, are a few of the many enigmas set afloat in the literary world by this one author. Becker's *Gallus*, Becker's *Charicles*, Donaldson's *Varonianus*, and *The New Cratylus* are of the same sort.

This tendency to the adoption or coinage of high sounding titles, to be followed by an explanation, prevails extensively. Jeremy Bentham's *Science of Morality* would be too commonplace. It is *Dæontology*; or, the *Science of Morality*. Again, we have *Eunomus*; or *Dialogues concerning the Law and Constitution of England*, by Edward Wynne.

Most of this fourth class would be well enough if the leading or fancy part of the title could be stricken out. It generally expresses a somewhat happy conceit which the author flatters himself is not altogether foreign to his book. But the reader is not prepared for it till he has read through to the end. Were he to find there such expressions as *Seed Truths*, *The Cradle of Rebellions*, and *The Crown of Wild Olive*, it would do no harm. The difficulty is that this fancy title is put first, and it is generally all that appears on the back of the book. One must know it to find the book in a shop or library. The consequence is that the book must go by that title only which is least significant and most confusing to the inexperienced. To know the true titles of books, those by which they ought always to be called, is possible only for scholars.

Were it any part of the purpose of this paper to entertain the reader, sufficiently amusing examples of the several classes mentioned would not be wanting. Think of the linguistic genius which devised *Aglossostomography*, for a description of a mouth without a tongue; or *Ocean Macromicrocosmic* for a treatise on the motion of the blood. A treatise on patience, fortitude, and pain, was called *The Three Daughters of Job*; another, containing a collection of passages from the fathers, *The Shop of the Spiritual Apothecary*. The last two are given by Disraeli in his *Curiosities of Literature*. He adds also *Matches lighted at the Divine Fire*; *The Sixpennyworth of Divine Spirit*; *Some fine Biscuits baked in the Oven of Charity*, carefully conserved for the *Chickens of the Church*, the *Sparrows of the Spirit*, and the *Sweet Swallows of Salvation*. The *Grumbling Hive* was misunderstood at first. It afterward appeared, with additions, as *The Fable of the Bees*. A treatise on algebra by Robert Recorde, published in 1557, was entitled *The Whetstone of Witte*. An introduction to the Talmud was called *The Bones of Joseph*. Ruskin's *Notes on the Construction of Sheepfolds*, a work on church doctrine and discipline, is said to have had "a considerable run among the Muirland farmers, whose reception of it was not flattering." A similar reception, we fancy, was given to *The Secret of Hegel*, by the young lady who supposed she had ordered the last new novel. My *Summer in a Garden* beguiled a hasty reviewer into a homily on horticulture.

5. The second class above mentioned was found to consist mostly of books whose contents were more general or miscellaneous than their titles indicated. The converse of this also frequently occurs, where the title applies well enough to the subject treated, but is general enough to apply equally well to several others. Such general titles as *Cosmos*,

The Earth, The Universe, may be proper in some cases, since a more particular one might involve an error in the opposite direction. There is no good reason, however, for calling physical speculations on a future state, The Unseen Universe. With what disappointment do nine out of ten readers lay down the book whose back presents them with Knowledge is Power, Knight, when they find that it simply contains the Results of Labor, Capital, and Skill. Maine's Early History of Institutions, recently published, promises the survey of a very wide field, but is found to contain a comparatively narrow one. First Principles by Herbert Spencer, Lamartine's Confidential Disclosures, and Among My Books by James Russell Lowell, are given without explanation on the title pages. They are significant only when one has become somewhat acquainted with their several authors. A Book about the Clergy, by J. C. Jeaffreson, stands also unexplained. How many subjects, theological, homiletical, devotional, biographical, political, and historical, might be covered by such a title. It is a work of two handsome octavo volumes, giving illustrations of English history in the usages and characteristics of its clergy. What a hotchpotch of titles we have of which nature is the leading word! Nature Displayed, by Dufief, is on teaching language. The Light of Nature Pursued, by Tucker, is on religion and morality. The System of Nature, by D'Holbach, is an atheistical treatise on the moral and the physical world. Macmillan's Footnotes from the page of Nature, is on the first forms of vegetation. Here are Voices of Nature by Cheever, and Voices of Nature by Dyer, one a series of analogies between the natural and the spiritual world, the other a collection of poems on all sorts of subjects. We have also The Book of Nature by John Mason Good, and The Book of Nature by Schoedler and Medlock. The former is a series of lectures on the physical sciences, language, literature, philosophy, history, criticism, etc.; the latter, as the title indicates, is devoted to physics, astronomy, chemistry, and the other physical sciences.

It is not to be forgotten that the inappropriateness of many titles arises from the changes which time has wrought in the use of scientific terms. Observations on Man may have been a good title to the philosophy of David Hartley in his day; but to-day we should hardly expect to find anything under it but a work on ethnology or anthropology.

6. Another source of great perplexity to the reader and the librarian is the lack of completeness in the title page. It might be impertinent to complain here of the suppression by the author of his own name, but there is no good reason for so frequent an appearance of the *sine loco et anno* of our catalogues. A book is often wanted on account of its place and date, and more often it is not wanted for the same reason. The title may declare the book a "new treatise" on some science of recent growth, as chemistry or geology; you find after much patient study that it was "new" half a century ago, but is very old now, and good only for

historical purposes. A cyclopædia without a date, and there are such, deceives nobody. It is rather suspected of never having been up to date. The cataloguers of the Library of the British Museum took great pains to make the descriptions of their books as complete in this respect as possible. When the place and date were not given, they endeavored to fix them by reading the book, and other books if necessary, by comparing the type with that of other books, and thus exhausting every resource before leaving a point unsettled. Here were untold hours of exhaustive labor, all because of the whims or negligence of authors and publishers.

7. To complete our survey of books under whose titles much valuable matter is likely to lie completely hidden from the inexperienced until discovered by accident or the assistance of others, one other class should be mentioned. To this belong those books which are, on the whole, properly named, but which naturally contain separate monographs or connected chapters on subjects not plainly suggested by the title. Sale's excellent Preliminary Discourse of one hundred and thirty-two heavy octavo pages on the Arabs and their religion both before and after the time of Mohammed, together with the life of their prophet, may be well enough, bound up with his translation of the Koran, and an experienced reader would not be surprised to find it there; but to the majority it must be pointed out or lost. Robertson's *View of the Progress of Society in Europe in the Reign of Charles V.*, is a case of the same kind. The *Moriæ Encomium* of Erasmus and the *Opus Majus* of Roger Bacon illustrate this class, as also some of those previously mentioned. Peter Bayne's *Christian Life*, social and individual, is a good title, and yet one would not be likely to take it down to read up on Howard, Wilberforce, Foster, Arnold, and Chalmers. Farrar's *Seekers after God* hides instead of suggesting the names Seneca, Epicurus, and Marcus Aurelius, to whom it is wholly devoted. Young's *Tour in France* appears on the back of a stout quarto. It is found to be a most valuable work, written with reference to agriculture and other sources of national prosperity in France near the close of the last century, and giving the prices of produce, labor, etc. Its abbreviated title might apply to a pleasure excursion just as well as to an indispensable work in the department of political economy. The celebrated forty-fourth chapter of Gibbon's *Decline and Fall of the Roman Empire*, on the Roman law and the great reformation under Justinian, is hardly covered by the general title of that work. Fifty-eight octavo pages of Douce's *Illustrations of Shakspeare* are devoted to a dissertation on the *Gesta Romanorum*. A multitude of examples of this class will occur to every one whose reading has been extensive; examples, too, where the chapter, or separate dissertation or monograph, thus hidden from the mass of readers, is large enough to make a good sized volume by itself.

It would be difficult, perhaps impossible, to determine the percentage

of a large library which is practically concealed under the several classes of titles mentioned. Few persons would probably estimate it at one-fourth of its real amount until they had begun to take the books down and examine them one by one. While this paper has been growing, examples have accumulated beyond all that was anticipated, until several tables are loaded with them. An examination of the few that are given will show also that the quality of this hidden material is not inferior to the average of library books. Nothing has been said of works of fiction; while their titles are often less significant than one might desire, their very nature would seem to take them out of the range of legitimate criticism in this respect. The conclusion from such a survey of a library can only be that the backs of books which stare down from the shelves at the reader, or even their fuller title pages, are by no means to be trusted as to the nature of their contents. They are like finger marks along the highway which have been painted and set up with reference to the taste of the artisan rather than to the geography of the country.

The inquiry now naturally arises: What guides can be furnished to conduct one by the shortest possible route, among so many insignificant and false signals, to the small segment of a library which he wishes to read on a given subject? The inquiry is not, How shall the experienced reader be assisted? though it may be doubted whether even he will not, in his search, often pass by what, if found, would serve him best. The question in most libraries has reference to the learner, not to the learned; to the general reader, not to the specialist. It must be understood, also, that it is the subject and not the book's title which the reader has in mind. He is investigating a subject, preparing a sermon, or an essay, or an article for the next quarterly, or reading up for a speech or a debate—he does not know what books contain the information he wants; he does not care what their titles are; he wants the matter, and at once. The difficulty has two phases: First, he may wish to exhaust his available resources. This he soon learns, where so much is hidden, is next to impossible. Secondly, and more commonly, he may wish to select for his special purposes a small portion of the whole amount at his command. To do this, he must not only be able to find every treatise or part of a treatise bearing on his subject, but he must also have the means of acquiring some information regarding everything within his reach, so as to make his selection intelligently. So far as we know, no general method has been adopted to meet his wants in either case, though it is probable that some libraries have particular devices not generally known. The common practice is for the reader, having become tired and dissatisfied with his own search, to get his references from some one who has some knowledge of the subject, or to expect the librarian to be a general encyclopædia of book contents. Every librarian, especially of a college library, will understand this. He has been worn out day after day in trying to meet this demand. He has found that the demand is too great. Be he

ever so learned, the differentiation of the sciences will have produced some important points which have escaped him. Be he ever so faithful, his nerves will tire, his memory will flag. Even an ordinary library is greater than all the men likely to be in charge of it.

What guide, then, can be furnished? The current of thought respecting libraries has not taken the direction of supplying one. The great object has been to accumulate books. Every effort has been put forth to multiply volumes, but comparatively little has been done to multiply the facilities for making them useful. To the credit of authors and publishers be it said, there is a tendency toward fuller indexes and more complete tables of contents; by so much are books made more convenient instruments of learning. We could wish that the same spirit might be extended also to the title pages. But this we can scarcely hope. Fancy and fashion will always prevail over strictly practical ideas. This question must be solved in the libraries. It should be considered in view of the past and the probable future. One or two hundred years ago books were comparatively few. Scholars might then know something of nearly the whole range of reading, each in his own department of study; with a few rare exceptions librarians might get a sort of mastery over their books, so as to become the personal guides of their readers.

Libraries for the use of students in colleges and professional schools were seldom of sufficient magnitude to raise the question about facilities for reference. When books were few, it mattered little whether the titles were well or ill chosen. A good index of authors or catalogue of titles, with an alphabetical or classified arrangement, might then have seemed adequate to the wants of all. The case is different now. The old books are still on our shelves and new ones are coming from every quarter. Most of the old libraries have been doubled several times during the last century, and new ones have been formed almost without number. The spirit of bookmaking was never more prevalent than now. Let it continue another century or two, and it will be next to impossible to make a judicious selection of what one has money to buy or time to read. Catalogues have grown with the growth of libraries, but no one has yet given us a science of cataloguing. Hardly can we find two alike, and none can be said to accomplish all that is desired. Cataloguers have generally attempted two things: first, to make a list, alphabetical or otherwise, of all their books; and, secondly, to furnish a guide to the reader in selecting what he wishes to read. Now, has not the failure to devise any plan of cataloguing on which there should be a general agreement arisen largely from the impossibility of accomplishing both these results with the same instrument? In the great multiplicity of books, and in the minute divisions and subdivisions of nearly every field of inquiry, has there not come to be room for two separate works for these two separate objects? Let the complete list of books be in any convenient form — this is not the place to propose a plan for that — is it not of the utmost im-

portance that there be also, in addition, a guide to the average reader? He seldom wishes to be pointed to all the books in a library, even in the department in which he is reading; he is not likely to care for a tenth part of them. What he does care for is the means of making an intelligent selection of what he wants from the great mass that he does not want. As nearly all catalogues are constructed, it is as we have seen impossible to find all a library contains which he might want, and if found, a selection of what he actually does want is possible only at the expense of much time and strength.

A biographical dictionary is designed to give a few briefly stated facts about the life, character, work, and influence of every man in any way eminent in the field which it covers. A dictionary of antiquities brings before the reader, in a few well chosen sentences, the prominent customs, social, religious, etc., of the ancients. Now, would it not be practicable to make a reference dictionary or library manual on a somewhat similar plan, which should contain the most important subjects of inquiry in the principal departments of human knowledge, under terms general or particular, alphabetically arranged, without definition or discussion, but simply with references to the best material to be found upon them, by whatever author and under whatever title? The selection of terms would not differ much from those of a first class cyclopædia. On many subjects, references would be necessary to different views and opinions and different modes of treatment. After the reference, a few words of description would suffice to show definitely the department of inquiry to which the treatise or monograph belongs, and the place it occupies in that department. Such facts as the number of pages in the reference, the time when it was written, the author's facilities for acquiring the necessary information, his political, religious, social, or scientific views, his object in writing, his mode of treatment, and the general effect produced, would not only determine the reader as to its desirability for him, but put him into such relation to it as often to enhance its value for him many fold. In short, much might be done to introduce to a general reader a choice selection of the best material on a given subject, with its leading peculiarities, so that he might approach it at once with the attitude of a scholar. Everybody knows how great the advantage is in reading a new book when one knows something of the author, and has read a brief and judicious review of the book. The class of facts mentioned above lies mostly outside the range of even the most complete catalogue. They are usually given to students by teachers or librarians in their personal intercourse, the same descriptions and explanations being repeated over and over again every year. What is desired, therefore, is a digest of this personal instruction, prepared with the utmost care, extended to every department of a somewhat complete library, and reduced to the exact form of a dictionary. Such a work could not be produced by an ordinary cataloguer, or even by the most experienced librarian. It might grow up under the hands of many

specialists, with the direction of an editor. It would be the constant companion and guide of every reader, young and old. It would do much to lift from librarians and teachers a burden which, already too great, is rapidly becoming greater. Could such a work be thoroughly organized and carried through to the end by a man like Dr. William Smith, the question of cataloguing would become a comparatively simple one.

In another respect, not before mentioned, such a work would be of incalculable value. A purchaser has little trouble in buying new books. He has before him the reputation or position of the author, and the fresh and tersely stated opinions of the reviewers. He makes his purchases easily, also, within a certain range of knowledge with which he is specially familiar. Outside these two classes, every purchase made by a librarian or library committee must either be made at considerable risk or after laborious investigation. The work proposed, if properly made, would put the purchaser into such relation to works in every field of inquiry as to render his selection intelligent and comparatively easy.

Were an illustration of this subject needed, we might introduce into a library a sophomore somewhat above the average of his class in capacity and attainment, and suppose him to have resolved upon a course of reading in English history. An easier case could not well be put. Give him a catalogue, or take him to the department of the history of Great Britain. There are the books: Hume, Macaulay, Lingard, Goldsmith, Hallam, Knight, Froude, May, Smollett, Green, Brodie, Buckle, Godwin, Henry, and a host of others, of every shade of political, social, and religious opinion—in fact, who agree in little else than that they have written on English history. Now, your sophomore will be very likely to turn upon you in confusion and say, "Sir, I have a few hours a day of leisure time which I want to devote to the reading of English history; what books shall I read?" And then you begin your oft-repeated task of learning from him his particular needs, and selecting for him the books he can use to best advantage. It is not sufficient to say that it is the function of teachers to mark out courses of reading. True, the case we have put might come, perhaps it ought to come, within the range of a professor, still a guide is wanted. Teachers cannot be fresh upon every subject, they cannot anticipate every demand; and, besides, the great mass of readers are without teachers. Of course, no such work is here suggested as Malcolm's Theological Index, or Hardy's Descriptive Catalogue of materials relating to the History of Great Britain and Ireland, or a digest of legal decisions. These are works for specialists. They have little or no relation to the general reader whose needs we have pointed out. In many cyclopædias we find at the close of here and there an article a collection of references for the further investigation of the reader. These references we have had constantly in mind while preparing the latter part of this

paper. They are usually thrown together without any well defined plan or order running through the book, but according to the tastes of the individual writers. Prepare these references properly and make a separate work of them, and you will supply as real a demand as that for which the cyclopædia was written. Such a work would be liable to failures and excesses, but no more so than any dictionary or cyclopædia. How much more of solid information about books should we have if as great effort had been put forth in the direction to which we have called attention as has been made in tracing the histories of old editions, or old books, determining where a certain leaf was torn, what title pages lack a certain word, or whether a certain autograph is genuine.

## CHAPTER XXXV

### BOOK INDEXES.

---

BY F. B. PERKINS,

*Boston Public Library.*

---

GENERAL REMARKS — IMPORTANCE OF INDEXES — DIRECTIONS FOR MAKING AND USING INDEXES.

“Indexes are the souls of books.”

Perhaps the most widely known, or possibly it would be more appropriate to say the least unknown, instance of indexing is the case of the great mind of Mr. Justice Best, an English judge. In the index to a certain law book, it is said, appeared the following entry:

BEST, Mr. Justice, his great mind, page 459.

And when the investigator interested in mental philosophy, or in the biography of eminent men, turned to the page indicated he found that a certain witness having been contumacious, “Mr. Justice Best observed that he had a great mind to commit the witness.”

This is a pretty good illustration of what an index ought not to do. An almost equally instructive case is one which is recorded of that most excellent man and eminent professional indexer, (at least of “rerums,” as some one phrased it,) the Rev. John Todd, D.D.—a case which reminds one of the alleged fact that lawyers always draw ill worded wills for themselves. The doctor, it seems, laid it down that the topic The Importance of Christianity to the World should be indexed under the word “importance.” Nothing could be of less “importance” as a reference unless it be one of the particles used. Dr. Todd might almost as well have directed to index the phrase under “of” or “the.”

The case of Dr. Todd does not indicate that his labor on indexes had profited him much; yet Dr. Johnson is reported to have said that “an index commonly profits most him that made it.” Our well known advocate of indexes, Dr. S. A. Allibone, seems to have meant to get all the good out of indexing that was possible on this principle, by annexing to his Dictionary of Authors twenty indexes. For an alphabetical list of authors this is providing pretty well.

But Dr. Todd, Dr. Johnson, and Dr. Allibone are by no means all the great authorities that have held and expressed decided views about indexes. Lord Campbell, the English literary judge, whose biographies, according to Lord Lyndhurst, “added a new terror to death,” has recom

mended for non-indexing bookmakers a fate almost stern enough to justify such a reputation as that. He says, in the preface to one of his books, that he meant "to bring a bill into Parliament to deprive any author who publishes a book without an index, of the privilege of copyright, and, moreover, to subject him for his offense to a pecuniary penalty." Mr. Carlyle, in his *Frederick the Great*, without any such threats as Lord Campbell's, twice refers, in his scolding way, to "indexlessness" as a reprehensible quality. "Books born mostly of chaos," he says, "which want all things, even an index, are a painful object." A book "wanting all things" would seem somewhat like that fabled gun which was "without lock, stock, or barrel." And in another place, in calling names at somebody he dislikes, Mr. Carlyle observes, "He writes big books, wanting in almost every quality, and does not give even an index to them."

Certain sorts of books require indexes, and others do not; so that these express and implied denunciations do not apply except for cause; a dictionary, for instance, being itself an index, in virtue of its alphabetical arrangement, does not need another index, nor does the ordinary novel. A contributor to *Notes and Queries*, it is true, lays it down that "every book worth reading requires an index." This, however, cannot easily be maintained, except by the "vicious circle" process of saying first that no book not requiring an index is worth reading. And probably this stern zealot is one whose practice would bear out his hard doctrine. But the rule would work a fearful devastation in circulating libraries; and I cannot believe that any reader of *Pickwick* ever wanted an index to it. Yet Dr. Allibone (in a short note in the *American Biblioplist* of January, 1872) quotes a request from Dr. Johnson to Richardson, to add to one of his novels "an index rerum, that when the reader recollects any incident he may easily find it, which at present he cannot do, unless he knows in which volume it is told." One almost suspects the old doctor of being sly and ironical in this suggestion, though the size and tediousness of Richardson's novels make the suggestion so perfectly proper as to be even awfully serious. The novels of to-day, however, certainly do not need indexes, nor do books of poetry, (unless it be Mr. Browning's,) nor collections of popular essays, such, for instance, as the thin compositions of Mr. Boyd, the English Country Parson. Let not this rule be applied to the Poet at the Breakfast Table, of Dr. Oliver Wendell Holmes, to which sparkling book is affixed an entertaining and witty index of ideas, which is one of the most diverting parts of the work. But Dr. Holmes would put valuable truths and witty thoughts into the inventory of a country store.

The proper general rule for indexes is obvious enough. Books of facts and for reference should be indexed. This is about as profound a rule as to say that tools which are to be used with the hand should have handles.

Plain as the rule seems, however, it is violated by authors themselves, and by translators and their like who live by the labors of others.

Such a case is that of M. Thiers's History of the French Revolution and his Consulate and Empire, the latter of which, in twenty volumes, has been translated into English and printed in London without an index. If you wish to fix the date of any occurrence between 1795 and 1815, for instance, hunt through the twenty volumes until you find it. According to the sentence from an old writer which stands at the head of this paper, the English "traitor" has deprived that great body of its soul. (I traduttori, traditori, is the Italian proverb, and "traduce" and "translate" are only *lead* over and *carry* over.) According to a certain Spaniard, he has left in the French the only part of the book which is necessarily the author's; for this energetic Spaniard, who would have been a joy to the very hearts of Lord Campbell and Dr. Allibone, thus stated the case: "The index of a book should be made by the author. Anybody can do the rest of it."

How much better than this barbarous omission is the practice of the German booksellers referred to in one of M. Bayle's notes: "The German booksellers have a laudable custom of adding good indexes to the books they reprint." Worthy men! What wonder, when the German avenues to knowledge are so diligently lighted and opened out, that a century or two later a distinguished English scholar, Professor Seeley, should find cause to observe that "Good books are usually found to be written in German." No wonder at all; they have handles to their tools. And yet it will not be found, I believe, that as much as \$64,500 was ever paid in Germany for one job of indexing; it was in England, though, and for part of a job. It was for indexing the journals of the House of Commons; for a piece of which was paid, in March, 1778, £12,900. This, except £500, was for thirty-one years' work, done by three men, one of whom got £6,400, or about \$32,000, for thirteen years' indexing.

Having said so much about indexing, I will try to make a few suggestions on it; for there is an art both of making and of searching indexes.

Considerations of space, time, and cost must usually be taken into account; so that for making an index the first step must commonly be to calculate how many pages are to be given to it and how many entries will go to a page. This last will depend upon considerations which in many cases need a printer's suggestions, unless the other persons concerned know something of the printer's business. If, for instance, a double columned page can be used, there will be a saving in expense; so there will by using small type and setting it solid. This point being determined, divide the whole number of entries to be allowed by the number of pages to be indexed, and thus find the average number to be allowed per page of the book. This average will often vary much on different pages; but by making a fixed number of entries to each page of the manuscript you can always easily see how you are getting on,

and adjust the work to the average. A careful and thorough indexer will usually feel a constant impulse to make too many entries.

The quickest way is, not to try to do the alphabetizing while you are writing the entries, but to write them one after another, as the words for the entries are found in the pages of the book, doing the alphabetizing afterward. It is convenient to select a paper whose width will match the average length proposed for the index entries; a wide paper (two lines of narrow paper will do instead) for long entries. This, with a little care, will avoid many cases of running over on to the second line in the print, which tends, of course, to double the space occupied per printed entry, and thus to halve the number of entries available. Other things being equal, of course the more entries the better. Between each two entries, as written, leave blank paper enough to allow of clipping the entries apart with ease; a blank line is enough.

Work as thoughtfully as time and pay permit. Choose for your index entries words actually used in the book, and if there is room put in synonymes, if desirable, with a reference to the word actually used. Chapter heads, tables of contents, running titles, paragraph sideheads, and marginal notes often give a good deal of the author's own nomenclature, which the indexer ought always to use.

Having gone through the book in this way, have a pair of shears long enough to cut across the pages of your manuscript at one clip, and cut the whole of your manuscript index into single entries. Next, alphabet them by initial letters. This process is usually best done by using a diagram or imaginary frame of five rows of five letters each, on which to put the titles at this first handling. The following arrangement of printers' dashes will show what I mean. (The letters placed at the left hand of the first row and right hand of the last indicate well enough where the rest belong.)

|   |   |   |   |   |   |       |
|---|---|---|---|---|---|-------|
| A | — | — | — | — | — | U     |
| B | — | — | — | — | — | V     |
| C | — | — | — | — | — | W     |
| D | — | — | — | — | — | X     |
| E | — | — | — | — | — | Y, Z. |

It is true that I and J might be run together; that K and Q are very short letters; that U and V might go together; and that X, Y, and Z might all be put in the same place. But these five ranks in five files are so symmetrical a plan—with the three fives of A, F, K, P, U across the head, C, H, M, R, W across the middle, and E, J, O, T, Y, Z across the foot—and hence so easily remembered on mnemonic principles, that they will be found for most people the best general index diagram by which to alphabet items. After a little practice, one can distribute items on this diagram without having to look at it; that is, a habit of hand can be formed to it, which is indispensable to easy and quick sorting of any kind.

This primary alphabetizing having been completed, it is best to begin at the end and sort backward for the second arrangement, if it is the ultimate one. If there is a very large number of items, it may be necessary to handle them a third time; but there are not many cases where two handlings will not do. This second handling is intended to leave the items piled in their proper index order, the first uppermost, for which the backward progress is best. To do this, take the Y, Z handful and spread it out on the sorting table singly; pick out the last slip and lay it down, the last but one and lay it crosswise at some angle over the last, and so on. When the Y, Z's have been thus laid, go on to the X's, then to the W's, and so on until you have finished the A's. You will probably top off with some member of the Abbott family if you are making a catalogue of English authors; with some Mr. van der Aa or other if a general collection of encyclopædia items. The first five items of the writer's index rerum of about 100,000 items (on catalogue slips—not in the absurd book of worthy but unindexical Dr. Todd) are, Abarbanel, Abarca, Abarim, Abaris, Abas.

In this secondary alphabetizing, do no "three-letter" or any other number of letter work, but subalphabet to the very end of your words, so as to put Constantinople before Constantinopolitanus on principle. No other rule is worthy a workman, and as often happens the thorough method will in practice require only very little more time than the unthorough. It will sometimes be a help to lay out secondary piles of A's, B's, etc., by the second letters, and then to do the ultimate subalphabetizing from these piles. Some letters permit a great many more secondary piles than others. Thus, A can be followed by all the 25 other letters; B, however, only by the vowels and two liquids, (unless, of course, you come across bdellium in making a concordance to the Bible, or Bhagavad in a list of Hindoo literature,) eight in all.

When the heap of ultimately alphabeted items is ready, make the copy for the printer. This is done by taking a pile of sheets of cheap or waste paper, drawing two streaks of mucilage or paste down the sides, (or three, two at the sides and one in the middle,) and then swiftly laying on the single-item strips across these gummed sheets, close together. Use no more paste or mucilage than necessary. Lay each successive sheet of gummed strips upon the previous one, under a light board or similar weight, to let them dry flat. When all are finished take them carefully apart, detaching any that stick with a paper-knife. Revise the whole once, with final corrections. Send to printer.

These directions seem prolix, but they do, in fact, constitute a well proved practical working method, which only requires writing the items once. Any experienced indexer will see the force of this consideration, while he may prefer many variations in detail. Such variations, if found convenient for any one's own tendencies of mind or hand, should always be adopted.

In searching an index, the only rule that is of much importance is

this: If you do not find what you require under the proper word, search, first, for its synonymes; and, secondly, for words that contain it; and, thirdly, for words that it contains. Thus, suppose that one is looking up the subject of coinage in America. Look first for Coinage; then for Numismatics, Mint, and Money, (partial synonymes;) then for Antiquities (often contains Numismatics;) then for Higley copper, Rosa Americana, Cent, Dollar, Pine-tree shilling, etc., (subordinate parts contained in the subject of coinage.) If nothing is found under such an assortment of entries as that, the hunt may be given up, unless one is in position to search the book itself.

## CHAPTER XXXVI.

### LIBRARY BIBLIOGRAPHY.

LITERATURE OF LIBRARIES — EDWARDS — PETZOLDT — MONOGRAPHS ON LIBRARIES —  
MANUALS FOR READERS — PARLIAMENTARY REPORTS ON THE BRITISH MUSEUM LI-  
BRARY — LIBRARY CATALOGUES, FOREIGN, AMERICAN — LIST OF BOOKS, AND ARTI-  
CLES IN PERIODICALS, ON LIBRARIES.

While the literature of libraries, if we include the catalogues and annual reports of individual collections, extends to many thousands of volumes, there have been comparatively few books devoted to the general subject of library economy and the history and statistics of libraries. Mr. Edward Edwards's *Memoirs of Libraries*, including a *Hand-Book of Library Economy*, printed in London in 1859, forms the only systematic treatise on the subject in the English language. This work, while crude and hasty in many parts, and embodying many errors of statement, has yet an extremely valuable assemblage of information respecting libraries, ancient, mediæval, and modern. It goes at considerable length into the history and statistics of the greatest public libraries of Europe, devoting 118 pages to the library of the British Museum, 60 pages to the National Library of France, 120 pages to the various libraries of Germany and Austria, 395 pages to British libraries, (exclusive of the British Museum Library,) and 75 pages to the libraries of the United States. Its chapters on library economy and management, although useful, are very far from being thorough or comprehensive; and it is a subject of regret, both to English and American readers, that a great book of nearly two thousand pages, devoted wholly to this subject, could not have been made still more valuable by the omission of extraneous matter and tedious catalogues of no general interest, and by the insertion of more full and systematic information regarding the internal economy of public libraries.

On this branch of the subject, while there are several valuable monographs in the German and other languages, Dr. Julius Petzholdt's *Katechismus der Bibliothekenlehre*, the second edition of which was published at Leipzig in 1871, is undoubtedly the most valuable. This little manual is fairly crammed with information in detail as to every department of a librarian's labors.

A list of the principal monographs on the general subject of libraries, or library history, management, classification, and catalogues, is appended

to this brief article. It also includes references to articles in many of the reviews and magazines on this subject which possess the most general interest. It is to be regretted that the most copious bibliography of catalogues and works relating to libraries, Vogel's *Literatur früherer und noch bestehender europäischer öffentlicher und Corporations-Bibliotheken*, published at Leipzig in 1840, is now nearly forty years in arrear. Were a similar work, giving the titles of all publications relating to libraries in all countries, to be now executed, the 543 pages of Vogel's industrious compilation might be more than quadrupled in extent, without devoting more than a line or two to each publication.

Of the various encyclopædia articles upon libraries, that contained in Knight's *English Cyclopædia*, 1860, volume 5, division of arts and sciences, is the best. This was written by the late Thomas Watts, of the British Museum Library, and it contains fifty closely printed columns.

Of the various handbooks for the guidance of readers in libraries, it may be said that no one of them possesses sufficient excellence to justify unqualified commendation. The *Course of English Reading*, by J. Pycroft, while the most extensive and pretentious of these manuals, is more than a quarter of a century behind the time in its list of books illustrating the various departments of knowledge. It presents, moreover, a model to be avoided in its principal contents, as well as in its style of composition. Of the more recent attempts to furnish a guide to students, accompanied by lists of works recommended in special fields, some swarm with errors of type as well as of judgment; while several can be consulted to great advantage, none can be relied upon as a satisfactory guide to a course of reading.

Much valuable information regarding the management of large libraries, and the most expedient and practically useful catalogue system, is to be found in the evidence before select committees of the British Parliament, in 1835 and in 1850, to inquire into the condition and management of the British Museum Library. The testimony of many of the first scholars and literary men of England, including Henry Hallam, Thomas Carlyle, Augustus de Morgan, J. Payne Collier, George L. Craik, John Wilson Croker, and others, was taken as to the supply of books, the conveniences to students and to the public, the inconvenience of the absence of printed catalogues, etc.

It remains to consider perhaps the most important contributions to library bibliography, namely, catalogues. Without assuming to add anything to the elaborate discussion of the various plans for cataloguing libraries; or to speak of the *rationale* of each system, all of which have their zealous advocates, it will only be attempted here to give a very brief indication respecting some of the more extensive and more useful printed catalogues of public libraries at home and abroad. At the outset it must be observed that these are intended solely for the inexperienced reader.

The schemes for the classification of knowledge have now become so numerous that a classification of the systems themselves has fairly become a desideratum. Attempts have been made to apply the systems for the distribution of human knowledge which have been invented by distinguished scholars to the classification of libraries and library catalogues. These attempts, however, have not been signally successful. Bacon's well known survey of human learning, distributed primarily under the three divisions of memory, of imagination, and of reason, according to the faculties of the mind assumed to be employed in the production of books, admirable as it may be for the classification of ideas, makes a sorry figure when applied to the divisions of a library. In the practical work of classifying books so as really to bring together all those on related topics, it turns out a worse than Procrustean bed. The first thing to be done is to get rid of the system-mongers, each of whom has a plan admirably adapted to the operations of his own mind, but quite unmanageable by those of other men.

The literature of catalogues is very copious, and may be said to begin, within half a century after the invention of printing, with the catalogue issued by the elder Aldus of Greek books printed by that famous typographer. What has been called the first bibliographical system was published by Conrad Gesner in 1548, and it has had numerous successors. Edwards, in his *Memoirs of Libraries*, gives comparative tables of thirty-two of the principal schemes for the classification of books, to which the reader is referred.

The largest libraries in the world are wholly without complete printed catalogues, although some of them have contributed to public information catalogues of portions of their stores, some of which are of considerable service. Thus the National Library of France, now the largest collection in the world, numbering nearly 2,000,000 volumes, has printed in ten volumes quarto a catalogue of French history and biography, copious and full of value, besides a similar catalogue of medicine, partially completed. The Library of the British Museum, while its manuscript catalogue reaches about 1,600 volumes in folio, is only very partially represented in the various printed catalogues of parts of the collection which have been issued. These include, besides sundry catalogues of manuscripts, maps, etc., a catalogue of printed books, prepared by Dr. Maty and others, in two folio volumes, of the date of 1787; a catalogue, in eight volumes octavo, prepared by Sir Henry Ellis and H. H. Baber, and issued 1813-19; a catalogue of the Royal Library, in five folio volumes, 1820-29; a *Bibliotheca Grenvilliana*, comprising a catalogue of the library presented to the museum by Thomas Grenville, in four volumes octavo, 1842-72; a valuable list of books of reference in the reading room, numbering about 20,000 volumes, the second edition of which was printed in 1871; and a first and only volume, in folio, of a catalogue of printed books, containing the letter A, by the late librarian Panizzi, which was printed in 1841. The last named volume is prefaced by the

ninety-three rules for the compilation of the catalogue, which have been largely availed of, though not adopted as a whole, in many other library catalogues, and the latest edition of which, with amendments, may be seen in Thomas Nichols's *Handbook for Readers at the British Museum*, 1866, pp. 38-54.

The printed catalogue of the Bodleian Library at Oxford, in three massive folio volumes, printed in 1843, with a supplement in another volume containing the books added from 1835 to 1847, although not edited with critical accuracy, is invaluable as containing a larger assemblage of titles in English literature than is found in the printed catalogue of any one library.

The catalogue of the Library of the Faculty of Advocates at Edinburgh, in three volumes folio, 1742-1807, is also important, but will be supplanted by the new catalogue of that library now in press, which has reached its third volume, in quarto. This elegantly printed work is distinguished by the copious biographical information supplied as to most of the writers whose books are catalogued, and it gives the title pages of all works with approximate fulness and accuracy. It is, however, destitute of collations, or indications of the number of pages, publishers' names, etc., of the works. It is arranged on the plan of a dictionary of authors; anonymous works, however, being entered (as in the Bodleian catalogues) under the leading term in the title page, and not under the first word of the title.

The catalogue of the Manchester Free Library, prepared by A. Crestadoro, issued in 1864, is an admirably edited work, arranged in an alphabet of authors, followed by "subject-matter entries, or classification." In the latter alphabet the titles are abridged into a single line, still preserving the date and place of publication, as well as the leading topic of the work and the name of the author. This catalogue gives the number of pages of every work in a single volume, but is without publishers' names. Anonymous books appear under the leading word of the title.

The catalogue of the Liverpool Free Public Library, established in 1850, is greatly abbreviated as to titles, and is arranged on the combination plan; authors, titles, and subjects being thrown into a single alphabet.

Among American library catalogues which will be found most useful may be briefly named the following, nearly in the order of the relative importance of the collections:

The catalogues of the Library of Congress comprise ten volumes, consisting, first, of a catalogue arranged by authors' names, in a single alphabet, published in 1864, to which have been added supplementary catalogues up to and including the year 1875. These annual catalogues, embracing each the accessions of a single year, report the titles of all works with approximate fulness, and give, in the case of all works not exceeding two volumes, the number of pages, of maps and plates, if any, and the name of the publisher. The reader is thus furnished with

some idea of the extent of each work, while the addition of publishers' names supplies a valuable aid to the identification of editions.

These catalogues of authors are supplemented by a Catalogue of Subjects, in two royal octavo volumes, 1,744 pages, issued in 1869. This is arranged on the plan of a strict classification of subjects, but on the synthetic rather than the analytic method, bringing topics which bear a close relation to each other together in subordinate alphabets under a general head, instead of scattering them through the catalogue, each under its own distinct head. Numerous cross references guide the reader to other portions of the catalogue in which aids may be found upon the subject in hand. To these must be added the Catalogue of Publications of Scientific Societies in the Library of the Smithsonian Institution, now deposited in the Library of Congress. There has also been published during the present year (1876) a select catalogue of the principal additions to the library during the three years, 1873, 1874, and 1875. This is an alphabetical catalogue of authors, followed by an index of subjects, in which a double reference is found for most works, first under the title, and secondly, under the subject matter of the work. In either case this subject index catalogue is complete in itself, giving author, date, and place of publication, thus rendering any reference back to the catalogue of authors superfluous.

The Boston Public Library has issued an abbreviated Index to the Catalogue of Books in the Upper Hall, in a very closely printed volume, published in 1861, with a supplement in 1866. These catalogues are arranged on the plan of entering the title in the alphabet under the author's name, while in an index of subjects in the same alphabet the title re-appears, greatly abbreviated, without date or place of publication. A similar Index to Books in the Lower Hall embraces the lighter literature which is kept for popular reading and circulation. Besides these larger catalogues, which contain perhaps less than half the titles embraced in the present collection of books, the Boston Public Library has issued several invaluable classed catalogues, on a more extended plan of description for the titles of works. These carefully prepared volumes embrace respectively, 1st, history, biography, and travels; 2d, arts, sciences, and professions; 3d, poetry, drama, collections, and miscellanies; 4th, French, German, and Italian books; 5th, fiction and juveniles; and, 6th, a chronological index to historical fiction. The catalogue devoted to history, biography, and travels is admirably edited, supplying not only full titles of the works in the library on these subjects, but a great amount of collateral information in literary history and biography, with copious references to articles in periodical literature, illustrating each topic that is treated.

The catalogue of the Astor Library, New York, issued in four volumes octavo in 1857-61, with a supplement in 1866, is a dictionary of authors, with a condensed index of subjects in the final volume, referring simply to the names of writers under each topic, without description. A dou-

ble reference has thus to be made by readers who pursue the topical method of inquiry.

The new catalogue of the Library of the Boston Athenæum, now in progress of publication, attempts a threefold guide to the wants of readers. It throws into one alphabet a dictionary of authors, under which every title appears with approximate fulness, but without collation or publishers' names; an index of titles, in which most works reappear under the first important word of the title, with cross reference to the author simply; and a catalogue of subjects, in which all the titles on a given topic are again arranged in an alphabet of authors, with titles but little abbreviated, and date and place of publication inserted in all cases. This is, in some respects, the best finding catalogue of any considerable public library yet issued, reducing to a minimum the number of double searches or cross references to be made by the reader.

The catalogue of the Library Company of Philadelphia extends to 1856, in three octavo volumes, and is arranged under general subject headings, with an alphabet of authors under each, followed by a copious index in one alphabet of authors' names; of subjects, and of leading catchwords in titles, referring the reader in each case to the page upon which the work is found fully described.

The catalogues of the New York State Library at Albany comprise the alphabetical Catalogue of the General Library, 1855, and its supplement, in 1861, each of which is followed by an index to subjects, repeating under each topic the names of the writers, and closely abbreviated titles of the works, without date or place of publication. This library has also issued a catalogue of the law department, 1850, and a catalogue of maps, manuscripts, engravings, coins, medals, etc., 1856, all of which possess considerable value for reference. Its latest publication was a Subject Index of the General Library, a useful, but greatly abbreviated reference list, issued in 1872.

The New York Mercantile Library, now reaching 160,000 volumes, very largely composed of duplicates, issued its latest general catalogue in 1866, which is arranged in an alphabet of authors, with an abbreviated index of subjects in a separate alphabet. Supplements on the same plan were published in 1869 and 1872. The catalogue of the Mercantile Library of Philadelphia, 1870, is on the most succinct plan, embracing authors, titles, and subjects, by a threefold arrangement, in a single alphabet. The catalogue of the Public Library of Cincinnati, issued in 1871, treats authors and subjects in a single alphabet, without, however, giving any complete alphabet of titles. Representing one of the largest and most popular libraries of the country, it will be found a highly useful manual for reference.

The Mercantile Library Association of San Francisco made its contribution to catalogue literature in 1874, in a handsome volume of 958 pages. This is a catalogue of authors, subjects, and titles, in one alphabet; the description of each work being full under the author's name only, while imprints are omitted both under the titles and the subjects.

## LIST OF BOOKS AND ARTICLES IN PERIODICALS ON THE SUBJECT OF LIBRARIES.

- Adresses des bibliothèques publiques en France.** 47 pp. 16°. *Paris, cercle de la librairie*, [1875].
- Albert (J. F. M.)** Recherches sur les principes fondamentaux de la classification bibliographique. vii, 63 pp. 8°. *Paris, l'auteur*, 1847.
- American social science association.** Free public libraries. Suggestions on their foundation and administration. With a selected list of books. 74 pp. 16°. *New York, Hurd & Houghton*, 1871.
- Appun (F. G.)** Dissertatio de transpositione bibliothecarum. 4°. *Helmstadii*, 1724.
- Art of making catalogues of libraries.** 8°. *London*, 1856.
- Bailly (J. L. A.)** Notices historiques sur les bibliothèques anciennes et modernes. 210 pp. 12°. *Paris, Rousselon*, 1828.
- Balbi (Adrien.)** Essai statistique sur les bibliothèques de Vienne. 206 pp. 12°. *Vienne, F. Volke*, 1835.
- Blume (F.)** Iter italicum. Archive, bibliotheken u. s. w. in Italien. 4 v. 12°. *Berlin, Nicolai*, 1824-30.
- Bohn (J.)** Observations on the plan and progress of the catalogue of the library of the British museum. [anon.] 28 pp. 8°. *London*, 1855.
- Bonnange (F.)** Nouveau système de catalogue au moyen de cartes. *Paris, Lacroix*, 1866.
- Boston public library.** Handbook for readers, with regulations, 3d ed. 117 pp. 32°. *Boston, Rockwell & Churchill*, 1875.
- Points to be considered in cataloguing, revising and proof-reading. 8°. *Boston*, 1870.
- Botfield (B.)** Notes on the cathedral libraries of England. xvi, 527 pp. 8°. *London*, 1849.
- Bougy (A. de.)** Histoire de la bibliothèque Sainte-Geneviève. 8°. *Paris, Comon*, 1847.
- British (The) museum, historical and descriptive.** 432 pp. 12°. *Edinburgh, W. & R. Chambers*, 1850.
- British museum.** A guide to the autograph letters, manuscripts, original charters, and royal, baronial and ecclesiastical seals exhibited to the public in the department of manuscripts. 48 pp. 16°. [London], *trustees*, 1870.
- A guide to the printed books exhibited to the public in the Grenville library and king's library. 41 pp. 16°. [London], *trustees*, 1858.
- A guide to the printed books exhibited to the public. 32 pp. 16°. [London], *trustees*, 1869.
- A list of the books of reference in the reading room. 2d ed. revised. xxviii, 349 pp. 2 pl. 8°. *London, by order of the trustees*, 1871.
- Buchon (J. A. C.)** Rapports sur la situation des bibliothèques publiques en France. 8°. *Paris*, [18—].
- Budik (P. A.)** Vorbereitungsstudien für den angehenden bibliothekar. 8°. *Wien, Gerold*, 1834.
- Vorschule für bibliothekarisches geschäftsleben. vi. 140 pp. 8°. *München, G. Franz*, 1842.
- Celsius (M. O.)** Bibliothecae regiae stockholmensis historia brevis. 12°. *Holmiae*, 1751.
- Clarke (W.)** Repertorium bibliographicum; some account of the most celebrated british libraries. xlvii, 673 pp. 8 l. *London, W. Clarke*, 1819.
- Clemens (P. C.)** Musei sive bibliothecae tam privatae quam publicae exstructio, cura, usus. 4°. *Lugduni*, 1635.
- Cotton des Houssayes (J. B.)** Des devoirs et des qualités du bibliothécaire. 8°. *Paris, Aubry*, 1857.
- Cowtan (Robert.)** Memories of the British museum. 428 pp. 8°. *London, R. Bentley & son*, 1872.
- Critical and historical account of all the celebrated libraries in foreign countries, as well ancient as modern.** [anon.] 5 p. l. 206 pp. 12°. *London, J. Jolliffe*, 1739.
- Danjou (F.)** Exposé succinct d'un nouveau système d'organisation des bibliothèques publiques. 29 pp. 8°. *Montpellier*, 1845.

- Delepierre** (Octave). Examen de ce que renferme la bibliothèque du musée britannique; extrait de documents authentiques soumis au parlement en 1846. 109 pp. 16°. *Bruxelles, A. Vandale, 1846.*
- Delessert** (B.) Mémoire sur la bibliothèque royale. 12 pp. 1 pl. 4°. *Paris, 1838.*
- Durey de Noinville** (J. B.) Dissertation sur les bibliothèques. 156 pp. 2 l. 16°. *Paris, H. Chaubert, 1738.*
- Ebert** (F. A.) Die bildung des bibliothekars. 2e ausg. 63 pp. 8°. *Leipzig, Steinaker & Wagner, 1820.*
- Geschichte und beschreibung der königlichen öffentlichen bibliothek zu Dresden. xviii, 358 pp. 8°. *Leipzig, Brockhaus, 1822.*
  - Über öffentliche bibliotheken. besonders deutsche universitäts-bibliotheken. 16°. *Freyberg, 1811.*
- Edwards** (Edward). Comparative table of the principal schemes proposed for the classification of libraries. vi, 22 pp. 2 pl. fol. *Manchester, 1855.*
- Free town libraries, their formation, management, and history in Britain, France, Germany, and America. With brief notices of book-collectors, and the respective places of deposit of their surviving collections. xvi, 371, 262 pp. 8°. *London, Trübner & co. 1869.*
  - Libraries and founders of libraries. 8°. *London, Trübner & co. 1864.*
  - Memoirs of libraries: including a handbook of library economy. 2 v. 841 pp; 1104 pp. *London, Trübner & co. 1859.*

## CHAPTER XXXVII.

### LIBRARY REPORTS AND STATISTICS.

---

BY THE EDITORS.

---

INTRODUCTION—COMPARATIVE STATISTICS BY M. BALBI—COMPARISON OF RECENT STATISTICS OF NINE IMPORTANT EUROPEAN LIBRARIES—COMPARATIVE STATISTICS OF AMERICAN PUBLIC LIBRARIES—AMERICAN PUBLIC LIBRARIES IN 1776, 1800, AND 1876—GROWTH OF PUBLIC LIBRARIES BY PERIODS—PUBLIC LIBRARIES GRADED ACCORDING TO NUMBER OF VOLUMES—CLASSIFICATION OF LIBRARIES—LIBRARY FUNDS—STATISTICS OF SIXTY-TWO LIBRARIES—BENEFACTIONS—LOSS AND WEAR OF LIBRARY BOOKS—CLASSIFICATION OF CIRCULATION—ANALYSIS OF LIBRARY STATISTICS—SUMMARY OF EXPENDITURES BY THE GENERAL GOVERNMENT ON ACCOUNT OF LIBRARIES.

#### DIFFICULTIES OF COMPARING LIBRARY STATISTICS.

In introducing this subject it is thought well to first present some of the difficulties in the way of instituting a just comparison between different libraries, because they illustrate perfectly many of the obstacles that lie in the path of one who undertakes to present trustworthy statistics of libraries at all. A fair study of these difficulties, and of others which are to be stated, may show the way to overcome them.

The views and tables respecting European libraries by the eminent statistician M. Balbi are first presented. While it is not to be inferred that difficulties and divergencies of equal extent prevail in the United States, every student of the subject will at once admit that they exercise an appreciable influence. The reader will observe that three authorities of recent date—the two new American cyclopædias, Johnson's and Appleton's, and Petzholdt's *Adressbuch*—have been added to the comparative table by the writers of this chapter. Otherwise M. Balbi has been allowed to tell his own story.

We deem it necessary to introduce the comparative table we have drawn up by a few observations relating not only to the difficulties which even an approximate determination of the number of volumes of the principal libraries presents, but relating as well to the propriety of basing such a comparison on a knowledge of the number of their volumes. We do not seek to hide from ourselves the fact that even if the comparative table we present should give the exact number of volumes in each library, it would still be of quite minor usefulness and utterly inadequate to enable a person to form an idea of the relative importance of these establishments. This in fact is to be inferred neither from the size of the books nor from their number. Two or three thousand volumes preserved in the War Dépôt at Paris, or among the military archives at Vienna; a few hundreds of the precious manuscripts of the Vatican Library

at Rome, the Laurentian at Florence, the Ambrosian at Milan, the Royal at Paris, the Bodleian at Oxford, or merely a thousand of the incunabula these libraries and those of the other capitals of Europe possess; a thousand even of those which form the principal part of Lord Spencer's magnificent collection, (justly regarded as the first of all the libraries at present owned by private individuals,) considered either with reference to scientific value and the special subjects of which they treat, or with reference to their high price, are undoubtedly equivalent to this or that library of Italy, Spain, or Portugal which contains twenty or thirty thousand volumes relating only to ascetic subjects, scholastic theology, and the old Aristotehan philosophy. How many thousand volumes of the latter class would it not be necessary to accumulate to represent the value of even a few of those portfolios which form the magnificent collections of engravings of His Majesty the Emperor of Austria, of His Imperial Highness the Archduke Charles, or of the cabinets connected with the royal libraries of Paris, Munich, Dresden, London, Amsterdam, Copenhagen, or the Imperial Library of Vienna! How many of these also would it not be necessary to amass to represent the value of some small special libraries; for example, the libraries of the celebrated Oriental scholars Morrison, Klaproth, Neumann, and Hammer, or that which the noted Baron Schilling collected during his voyage to Kiachta, which scholars wish to see united to the library of some public establishment at St. Petersburg, where it is at the present time; or the valuable botanical library of M. De Candolle at Geneva, joined to the magnificent herbarium of this first of living botanists; or even the collection of Japanese books that the celebrated traveller Siebold has just brought to Europe—a collection which, in spite of its meagreness, (it consisting of only 1,500 volumes,) is the largest that this portion of the world possesses, independently of the importance of the works it contains!

But, while admitting the inadequacy of this isolated element to measure the relative importance of libraries, we none the less consider it the foundation of any comparison of which these establishments admit. We even add that it is as yet the only element which can be reduced to figures. As this inquiry concerns only the principal libraries the general or special character of which is indicated by their titles, or by the names of the institutions to which they belong, the careful reader will avoid confounding libraries composed in great part or almost wholly of modern works, or those, at least, of considerable importance in regard to science, letters, or the fine arts, with similar collections long since made in the quiet retreats of certain religious corporations; collections which in our day have lost nearly all the value they once had. Put on his guard by these considerations, the intelligent reader will not seek to draw a comparison between elements which in their nature are not comparable. With this reservation in mind, the respective number of volumes will, up to a certain point, indicate relative importance. This, moreover, is the only element which travelers, historians, and statisticians have up to this time taken the trouble to work up. It is also the only one which affords us the means of making useful and interesting approximate comparisons between the present time, so rich in productions of the human mind, and the periods which have preceded it.

To be frank, one may say without fear of error that, with the exception of a few of the principal libraries of Europe, in each of these useful establishments, at present so numerous in this part of the world, and still so rare in America, the United States alone excepted, the exact number of volumes is unknown. The long and varied researches to which we gave ourselves up in compiling the comparative table of the principal public libraries of Europe, published in 1822, in the Statistical Essay on the Kingdom of Portugal, and the Statistical Résumé, relative to the principal public libraries of Europe and America that we published in 1828, put us in possession of a quantity of facts as interesting as they are important, which confirm our assertion. The imposing and scrupulously minute details so frequently published by statisticians, geographers, and travelers, offer only a delusive exactitude; since authors who are contemporaneous, sometimes writing even in the same year, assign to the same library numbers of volumes which differ from each other by a fourth, a third, a half, and even by more than four times and ten times as many.

The table following is only a fragment of the one we drew up for our manuscript dissertation. It exhibits the most surprising disparity of estimates made as to the number of volumes contained in a given library by the most celebrated geographers, the most learned statisticians, and the most judicious travelers, as well as some of the opinions advanced by those skilful writers who manage to appropriate the labors of their predecessors without being polite enough to mention them. We greatly regret our inability to add to the table of the libraries of Paris the estimates taken from the excellent Statistics of France from 1818 to 1823, a work that the painstaking scholar M. Bottin yearly reproduces, with important changes, under the modest title of the Commercial Almanac. These estimates would certainly render more piquant the collocation of figures relative to the richness of the libraries in the French capital. We do not cite his estimates subsequent to the year 1823, because, having worked with that scholar, to insert his estimates concerning these libraries would be to offer our own calculations.

*Comparative table of the principal estimates made of the number of volumes in several noted libraries.*

\* The author of the New Pocket Companion for Oxford, published in that city by Cook, in 1802, thus expresses himself concerning this library: "It contains more books than any other library in Europe except the Vatican." We quote this statement because it is probably the original source of the error of more than one celebrated statistician and geographer, whose opinion has been slavishly followed by the compilers of abridgments and statistical tables.

*Comparative table of the principal estimates made of the number of volumes, etc.—Concluded.*

Disheartened by this surprising disparity of opinion, we have more than once been upon the point of abandoning so difficult a subject; but regretting the considerable amount of time spent in these investigations, we exerted ourselves to complete them. We even tried to go back to the source of these different estimates; and we hope we have found it in the causes indicated in the paper already mentioned.

What was true of the population of states in the second half of the last century, is still true of this portion of comparative statistics. Only approximate data exist concerning even the best known libraries; the most contradictory estimates are made as to the richness of all the others. National writers sometimes repeat, without any criticism whatever, the extravagant verbal or written estimates of an unscrupulous librarian, who thinks he adds to the fame of the collection intrusted to his charge by exaggerating the number of volumes it contains; sometimes they repeat traditional estimates which have descended from father to son, nearly always the most erroneous; sometimes, actuated by excessive conceit, and relying upon approximate calculations

which they have themselves made upon erroneous bases, they boldly tax with ignorance or incorrectness the careful writer who, after having examined all concerning the same library which has been written by his other learned compatriots, or by enlightened strangers who have visited the collection, ventures to express an opinion different from their own. There are only too many scholars who, unacquainted with the varied information which the preparation of statistics demands, accustomed to accept as correct the erroneous estimates which fill all the geographies, dictionaries, encyclopedias, statistical tables, and many and many a work which passes for a classic, do not hesitate to reject as erroneous differing valuations which are official estimates, obtained by means of special request, or in many other ways, the results of long and wearisome investigations obtained by some statisticians or travelers as capable as they are conscientious.

One of the principal causes of this astonishing disparity of opinion is undoubtedly the different manner of calculating the literary wealth of the same library. One author will count only the printed books; another adds to these the number of manuscripts; a third reduces to a certain number of volumes the dissertations, pamphlets, and fugitive pieces which are preserved separately in pasteboards or bound into volumes, which the first entirely excluded from his estimate; a fourth adds in the same way a certain number of volumes for engravings, maps, and plans, which, not forming part of any work, could not be included among the printed books; a fifth, looking upon all the dissertations, pamphlets, and fugitive pieces as so many volumes, thinks he should add their number to that of the printed books contained in the library; by which means he greatly increases the aggregate of volumes; finally, there will be still another, who subtracts from the total number of volumes all duplicates, *i. e.*, which belong to works already counted in the mass of printed books. These different methods of calculation, and some others that it would be too tedious to mention here, should not be confounded with those previously considered, which are the principal source of the errors propagated by worthy travelers and scholars, but which the negligence or even ignorance of some geographers does not hesitate to reproduce in their works.

Almost the same thing has happened concerning the wealth of libraries which has taken place in the case of the population of certain large cities of Asia and Africa, where the census returns made now or the criticisms of competent judges have reduced the millions of inhabitants to a few hundred thousand. The catalogues of some libraries, also, which have recently been prepared, or examinations of the collections made by travelers familiar with statistics or by the librarians themselves, have treated, as they deserved, these gross estimates and absurd exaggerations (which, however, still disfigure justly celebrated works) in reducing by one-third, one-half, or even nine-tenths the number of volumes it was generally agreed to assign them.

Before the revolution nearly everybody in France estimated at 300,000 or even 500,000 volumes the *Bibliothèque du Roi*. A judicious bibliographer, the late M. Barbier, had reduced it to 200,000 volumes, (in the *Annuaire administratif et statistique du département de la Seine* for the year XIII, 1805.) But already the learned librarian at that very time, M. Van Praet, having in 1791 counted one by one the volumes then embraced in the collection, had found only 152,863, of which 23,243 were of folio, 41,373 of quarto, and 88,252 of octavo and smaller sizes.

The author of an able article on the library of the city of Lyons not long since reduced to 90,000 volumes the 106,000, 110,000, and 120,000 that for several years some people have been pleased and still choose to accord it.

We had always heard that the St. Mark Library at Venice had 150,000 volumes. We thought we approached the truth in placing the figure at 90,000 in 1822 in the *Statistique du Portugal*; but on returning to Venice in the same year, we were assured by the learned librarian, the Abbé Bettio, that it did not then count more than 65,000 volumes and 5,000 manuscripts. It is not without a feeling of surprise that we see

statisticians still assigning it in 1832 a number of volumes more than double that which it possesses.

The ordinary estimates agreed in placing the number of volumes in the private library of George III, given by George IV to the British Museum, at 150,000 and even 200,000; an examination has just reduced this number to 65,000 volumes.

Mr. Schubert, professor at the University of Königsberg, who has made long investigations of this subject, and who has visited the principal libraries of Europe in the capacity both of a learned man and a distinguished statistician, assured us in 1824, at the time of his visit to Paris, (citing as authority Mr. Reuss, the principal librarian at Göttingen,) that this magnificent establishment, generally agreed to contain 300,000 volumes, really counted few beyond 200,000.

What shall we say of the ridiculous, not to say absurd, exaggerations found in deservedly noted works about the number of volumes of the Vatican Library at Rome and the Bodleian Library at Oxford?

What should one think of the geographical and statistical knowledge of a learned naturalist who, in the eighth volume of the *Précis de Malte-Brun*, published in 1829, says, page 611, that "the Bodleian Library, with the exception of that at the Vatican, contains more books than any other in Europe;" and who, in 1832, page 78 of the fourth volume of the second edition of the same work, repeats that "the Bodleian Library, with the exception of that at the Vatican, and the Bibliothèque du Roi, at Paris, contains more books than any other in Europe."

As early as the year 1822, in our Statistical essay on the kingdom of Portugal, guided by the assistance of a learned bibliographer, we corrected these exaggerations in estimating the first library at only 60,000 printed books and 60,000 (?) manuscripts; and in assigning to the three united libraries (Bodleian, Radelif, and Christ College) belonging to the University of Oxford only 400,000 volumes and 30,000 manuscripts. We were gratified to see this last estimate adopted by M. de Malchus, although the learned statistician, always so scrupulous about his quotations, forgot to mention the source whence he obtained his estimate, widely different as it was from all which had previously been made of the number of volumes in the celebrated Bodleian Library. The researches we have since undertaken, and the facts we have been able to gather, have proved to us that we were not far from the truth. Notwithstanding the imposing name of Ebert, who in 1823 allowed it 300,000 printed volumes and 25,000 manuscripts; notwithstanding the 400,000 printed volumes and the 25,000 to 30,000 manuscripts that were assigned it in 1827, by the anonymous writer of the able article on the principal libraries of Europe, reproduced in the *British Review* of the same year, we continue to accord to the Bodleian Library only about 200,000 volumes and 25,000 manuscripts. In support of our view we cite the authority of the learned Hændel, who, in 1827, gave it only 180,000 printed volumes and 17,000 manuscripts, and the *Quarterly Review*, which, in 1826, placed the number at 200,000. We will add, that M. de Nagy — a distinguished mathematician, a member of the Philosophical Society of Philadelphia, and librarian of Count Caroly — who, as a savant, visited all the principal libraries of Southern Germany, of France, of the United Kingdom, and of the United States, accords it only about this number, in a note on this subject with which he has been pleased to favor us.

Within the past two years the statistics of a hundred or more of the principal European libraries have been published in this country in two different works, each generally regarded and consulted as a standard authority. A comparison of these statistics proves that the startling differences shown by M. Balbi forty years ago have not entirely disappeared. The following are examples, the names of the libraries and the number of volumes in each as given by both being shown:

|                                     |         |         |
|-------------------------------------|---------|---------|
| Augsburg, City Library .....        | 100,000 | 150,000 |
| Cambridge, University Library ..... | 250,000 | 400,000 |
| Frankfort, City Library .....       | 100,000 | 150,000 |
| Freiburg, University Library .....  | 170,000 | 250,000 |
| Gotha, Ducal Library .....          | 150,000 | 240,000 |
| Hamburg, City Library .....         | 200,000 | 300,000 |
| Leipzig, City Library .....         | 100,000 | 170,000 |
| Leipzig, University Library .....   | 200,000 | 350,000 |
| Munich, Royal Library .....         | 400,000 | 900,000 |

That is to say, in reporting the statistics of nine libraries, these two authorities do not agree within 1,240,000 volumes.

Taking as the basis a list of public libraries in the United States reported as numbering 10,000 volumes or more in 1875, the following table has been prepared showing the number of volumes each contained at the several periods named, gathered from the best available sources. It is not to be supposed that the statistics of any period are complete, though it may be reasonably claimed that those for the year 1875 are nearly so. So little was known respecting public libraries in the United States a quarter of a century ago, that the Secretary of State was compelled to answer an inquiry by a committee of the British Parliament for information respecting them, as follows :

DEPARTMENT OF STATE,  
*Washington, July 18, 1850.*

I regret to be obliged to inform you that soon after the receipt of Mr. Crampton's note (soliciting "certain authentic information with regard to public libraries in the United States") an attempt was made to obtain the particular information desired but without success; and that, with every disposition to do so, the Department finds that it has no means of gratifying the wishes of Her Majesty's government in this respect.

J. M. CLAYTON.

It is probable that one of the reasons of the attempt to gather the statistics of public libraries in the United States census of 1850 was the discovery of our inability to answer the inquiry referred to above. In the census of 1860, and again in that of 1870, the statistics of public libraries were included and published in the returns. Respecting the value of these statistics, General F. A. Walker, Superintendent of the Ninth Census, remarks :<sup>1</sup>

The statistics of libraries have never been very creditable to the census of the United States. Such improvement as was practicable with the machinery provided for the collection of these statistics has been effected at the ninth census, and the results will be found in the table following in comparison with the published results of 1860; but no great amount of complacency will be experienced upon a critical examination of the figures. The fact is, the machinery of the census under existing provisions of law, defective as it is in many particulars, is less adapted to work out correct results in this matter of the statistics of libraries than in any other use to which it is applied.

In 1860, there were returned, of all kinds, 27,730 libraries, containing 13,316,379 vol-

<sup>1</sup> Ninth Census of the United States: Population and Social Statistics, p. 472.

umes. Of these, 8,149 were returned as private libraries, containing in the aggregate 4,766,235 volumes, but for some reason, inexplicable at this date, 8,140 of these libraries, containing 4,711,635 volumes, were incorporated in the published table with public libraries, while the nine remaining private libraries, containing 54,600 volumes, were incorporated in the libraries of schools and colleges ; as appears by notes to the table following, verified by reference to pages 502 and 503 of the volume on Mortality and Miscellaneous Statistics for the Eighth Census.

Except in 1849-50 by Jewett, in 1857-58 by Rhees, and in 1868-69 by Winsor; no systematic attempt to localize, classify, and combine the statistics of all our public libraries was made until 1870, in which year the Bureau of Education adopted a plan which has been steadily pursued to the present time. Not all the libraries reported at any period named are included, because some, though still existing, do not yet number 10,000 volumes, and others have ceased to exist as distinct libraries.

The statistics for 1836 have been adopted from the American Almanac for the year 1837, article Public Libraries.

For the statistics of the year 1846, recourse was had to a paper read before the Statistical Society of London in 1846 by Edward Edwards, of the British Museum, and published in volume XI of the Statistical Journal.

For the year 1849, the statistics gathered by the late Prof. C. C. Jewett, of the Smithsonian Institution, and published in 1851, have been used.<sup>1</sup>

For the year 1856, statistics are presented from two sources, Triibner's Bibliographical Guide to American Literature, published at London in 1859, and the American Almanac ; for 1857-58, Rhees's Manual of American Libraries, published by J. B. Lippincott & Co., Philadelphia, 1859.

An article by A. R. Spofford, Librarian of Congress, in the National Almanac for 1864, furnished statistics for the year 1863. The data for these returns were procured by Mr. Spofford, as far as practicable, by correspondence with the officers of libraries, though of course at that time it was impracticable to obtain reports from many of the Southern States.

It should also be remarked that the statistics of college libraries published in the National Almanac did not include students' libraries, which are contained in the reports for 1875, and therefore the comparison between the two dates must be made with some allowance as to that class of libraries.

In 1868-69, Justin Winsor, superintendent of the Boston Public Library, collected valuable statistics respecting the public libraries of this country and Europe, which were published in the seventeenth annual report of the Boston Public Library, and of which use has been made.

The statistics for the year 1874 are taken from a table in the new

---

<sup>1</sup> Notices of Public Libraries, etc., Smithsonian Reports, Washington, 1851.

edition of Appleton's Cyclopædia, which professes to include all public libraries numbering 25,000 volumes or more, and no others. This accounts for the high average shown for each library under that year.

The figures in the next to the last column, 1875, are copied from the statistics published in the *Chronique du journal général de l'imprimerie et de la librairie*, Paris, February 5, 1876, and are said to include "the principal public libraries of the United States," and purport to have been gathered by a "statistician of New York." These statistics are amusing from their insufficiency and inaccuracy, but it is painful to reflect that they have been put forth where their sufficiency and accuracy will probably not be often questioned.

Table showing the size, at different times, of American public libraries

| Place.                  | Name of library.     | Date of origin.                          | American Almanac. | Edwards.        |

## LIBRARIES IN 1776, 1800, AND 1876.

In trying to show the growth of American libraries it became necessary to fix on some date as a starting point, and for several good reasons the year 1776 was chosen. The difficulty of finding out the number of public libraries and their extent at a date so far in the past was great; indeed it seemed insurmountable. The most patient and earnest investigation, aided by the generous co-operation of many gentlemen interested in the subject, has brought together the facts embodied in the following table. It is not claimed to be perfect, but the data, gathered from sources deemed reliable, may be trusted so far as they go, and therefore deserve preservation. The same remarks apply to the statistics for the year 1800, which date it seemed fit also to include.

As many of the libraries of those early periods still live and continue to flourish, it is well that their present extent should be shown here; where the original library is perpetuated in an active successor, the fact, if known, is also stated. The names of several libraries are given which are known to have existed as early as the beginning of the century, but it has so far been impracticable to obtain reliable information as to their extent at that time. Choosing that estimates which might be wide of the truth should not be perpetuated, the spaces for number of volumes have in these cases been left blank, in the hope that they may one day be properly filled.

Table of American public libraries in 1776, 1800, and 1876.

| Place.        | Name of library.                   | Date of origin. | Number of volumes. |           |        | Remarks.   |

## GROWTH OF PUBLIC LIBRARIES BY PERIODS.

It is to be regretted that in presenting a view of the growth of American libraries in the last century by periods of twenty-five years each, it is impracticable to show how many volumes were contained in all the libraries at the end of each period. As that cannot be done, the following tables are arranged to show, first, the number of libraries established in each period, and, second, the number of volumes contained in 1875 in all the libraries formed in each period.

It should be observed that, owing to the failure of many libraries to report the date when they were formed, the sum of all the libraries on the following tables is not equal to the whole number of libraries (3,682) from which reports were received in 1875; and of course the same is true of the number of volumes reported. This manner of stating it introduces one other slight element of uncertainty that cannot be avoided. The few public libraries which have become extinct get no credit for the number of volumes they contained. It is conjectured, from the known facts respecting the wonderful increase of public libraries in the United States within the last quarter of a century, that the larger number, if not all, of the libraries which did not return the date of their organization should be assigned to that period; but it has been thought best, for the sake of accuracy, to omit them from the tables altogether.

Notwithstanding these imperfections, however, the tables will be found an interesting study, and will convince any one of the remarkable strides America has made in the last twenty-five years in developing this means of general culture.

It appears that between 1775 and 1800 there were established 30 libraries, which now number in all 242,171 volumes; between 1800 and 1825 there were formed 179 libraries, now numbering altogether 2,056,113 volumes; between 1825 and 1850 there were founded 551 libraries, now containing an aggregate of 2,807,218 volumes; and between 1850 and 1875 there were instituted 2,240 libraries, which now number a total of 5,481,068 volumes.

It is believed that no further summary of these tables is needed.

Table showing the number of libraries established from 1775 to 1800, with the number of volumes in 1875.

## LIBRARIES GRADED ACCORDING TO NUMBER OF VOLUMES.

The following table, compiled from the general table at the end of this volume, shows by States, in sixteen classes, the number of public libraries in the United States, numbering 500 volumes or more, arranged according to the number of volumes in each. There are 2,958 such libraries, with an aggregate of 12,039,724 volumes. Besides these, there are 724 libraries, mainly formed within a very recent period, numbering from 300 to 500 volumes each, and containing altogether 237,240 volumes.

It may be remarked in explanation of a slight difference in respect to the number of libraries each of which numbers 10,000 volumes or more, between the following table and the comparative table in an earlier part of this chapter, that while in the following table the libraries of students' societies in colleges are kept distinct from the college libraries proper, in the former they were necessarily combined with the college libraries for the purpose of uniformity in comparison. For this reason, the number of libraries of the class named is slightly larger in the former table.

Table of public libraries in 1875, graded according to number of volumes.

## CLASSIFIED TABLE OF PUBLIC LIBRARIES.

The classification adopted in the following table, though not in all respects satisfactory, is the best that much study has suggested. Respecting some of the classes, a few words of explanation are necessary.

*Academy and school libraries.*—This class comprises those of all schools—except colleges and professional schools—including seminaries and institutes for the higher education of women, business colleges, normal schools, academies, and high schools, but not of common or district schools, save in a few instances, which do not materially modify the figures.

*Society libraries.*—This class includes only the libraries belonging to students' societies in colleges.

*Scientific.*—In this class are grouped the libraries of schools of science, including colleges of agriculture and mechanic arts, and of scientific societies.

*Public.*—Into this class are brought all libraries open to the public without charge or for a nominal fee only.

*Social libraries.*—These include athenæums, young men's associations and institutes, and subscription libraries generally.

*Asylums and reformatories.*—The libraries of this class comprise those of all asylums, hospitals, workhouses, reform schools, and prisons.

*Miscellaneous.*—There are many libraries so individual in character that it has seemed impracticable to assign them properly to any one of sixteen classes, and they are, therefore, reluctantly classed as miscellaneous, though it must not be understood that this term always applies to the contents of the collections. The number under this head might have been considerably reduced by forming another class, including the libraries of secret and benevolent societies and associations; but these latter are so numerous and libraries so generally distributed among them that it was thought such a classification would be little, if any, more satisfactory and definite than the one adopted.

For convenience the table is arranged by States as well as classes, and includes all libraries numbering 300 volumes and upward. It accounts for 3,682 libraries of all classes, which number in the aggregate 12,276,964 volumes, an average of about 3,334 volumes for each library. Of the whole number of libraries included in the table, 742 of the circulating libraries in 1874-75 reported the average number of volumes yearly taken out by readers, giving an aggregate of 8,879,869 volumes, nearly 12,000 volumes each.

As this table is itself a summary, no further explanation regarding it seems necessary. The aim has been to insert no item that is not significant, and, on the other hand, to omit none essential to the reader who desires to ascertain the number, kind, and extent of our public libraries.

Classified table of public libraries in 1875.

## LIBRARY FUNDS.

The following table is presented with reluctance. Stated briefly, 358 libraries report permanent funds, amounting to \$6,105,581 in the aggregate; 1,364 report that they have no permanent funds; and 1,960, considerably more than one-half, do not report either way. The incompleteness of the statement detracts greatly from its value and renders it unsatisfactory; though, having been prepared from special returns and from such printed reports as could be consulted with a feeling of confidence, it may be relied on as substantially correct, so far as it goes. It should be remarked that the value of lands and buildings, unless yielding a revenue, is not included in the following statement.

If one chose he might with some reason conjecture, taking the following table as a basis, that the permanent funds of American public libraries aggregate about \$12,000,000; he might be nearly correct, and it is possible that he would be millions wide of the mark.

The truth is that in the present state of library reports there is hardly a more difficult and thankless task than to undertake to prepare an acceptable statement of the finances of public libraries. The printed reports of some afford clear and intelligible statements of their funds, income, and expenditures; others may, perhaps, be comprehended by their makers; while others can hardly be intelligible to any one.

The above criticism is true in a less degree of the latest reports than in respect to those of former years, and a reasonable hope is cherished that the improvement will continue in future in a greater ratio than it has been manifested in the past; for it must be remembered that an immense multiplication of public libraries has taken place within a few years, calling to the desk of the librarian many hundreds necessarily unskilled in their duties, and it is perhaps to be wondered that so much has been done so well, rather than that much has been ill done or entirely neglected. As they gain experience librarians will, doubtless, realize more fully the importance to themselves and their libraries of keeping more complete statistics.

Table showing amount of funds of public libraries by classes in 1875.

## CLASSIFIED STATISTICS OF SIXTY-TWO LIBRARIES.

The following table shows the number of volumes, the yearly circulation, the yearly additions, the amount of permanent fund, the total yearly income, the yearly expenditures for books, periodicals, and binding, and the yearly expenditures for salaries and incidentals of 62 libraries, with the unavoidable exceptions arising from incomplete returns. No report of the yearly use by readers was made by 11 reference and 2 circulating libraries, which contain altogether 514,592 volumes.

The 62 libraries number in the aggregate 2,695,760 volumes. The 49 libraries reporting the yearly circulation contain altogether 2,181,168 volumes, and there were taken out by readers in the year, 4,455,514 volumes, or more than 200 per cent. To 60 libraries, numbering in the aggregate 2,670,760 volumes, there were added in the year 154,924 volumes, or nearly 6 per cent., while two of the libraries do not report the increase, if any. Permanent funds are reported by 43 libraries, and amount in the aggregate to \$2,378,655; of the remaining libraries 15 report no permanent fund and four furnish no report. The total yearly income reported by 61, from all sources, is \$799,256; while one, though not stating whether it has any income or not, evidently receives funds from some source, having expended \$4,278 within the year. The yearly outlay for books, periodicals, and binding was reported by 56 libraries, and amounted to a total of \$278,318; of the six which did not report this item, two had been established but little more than a year. The aggregate amount paid on account of salaries and incidental expenses by 58 libraries was \$467,555; from four no report was received.

Table showing number of volumes, yearly circulation, amount of permanent fund, and yearly income and expenditure of sixty-two selected libraries in 1874-75.

| Place.                     | Name of library.                              | Number of volumes. | Yearly circulation. | Average yearly increase. | Permanent fund. | Total yearly income. | Yearly expenditure.              |                           |

## BENEFACTIONS TO PUBLIC LIBRARIES.

It was designed to present a tabular view of the benefactions to public libraries, and strenuous efforts have been made to gather the necessary data for that purpose; but as it is found impracticable on account of its incompleteness to classify and tabulate properly the information received respecting the numerous gifts, it has been decided to substitute the following summary, showing, by States, the amount of the several benefactions, including gifts of money, land, and buildings, prepared from the special returns received, and from such printed reports as were found available for the purpose:

California, \$1,022,000; Connecticut, \$773,607; Delaware, \$17,600; District of Columbia, \$25,000; Georgia, \$63,500; Illinois, \$2,644,050; Indiana, \$150,000; Iowa, \$13,850; Kansas, \$500; Louisiana, \$15,000; Maine, \$135,950; Maryland, \$1,426,500; Massachusetts, \$2,903,406; Minnesota, \$15,300; Missouri, \$194,637; Nebraska, \$1,100; New Hampshire, \$58,379; New Jersey, \$416,750; New York, \$2,942,272; Ohio, \$197,500; Oregon, \$250; Pennsylvania, \$1,448,473; Rhode Island, \$294,781; South Carolina, \$35,000; Tennessee, \$450; Texas, \$18,000; Vermont, \$74,308; Virginia, \$26,000; Wisconsin, \$6,500; total for the United States, \$14,920,657.

Information, much of which is doubtless reliable, though not in proper form for use, respecting many gifts not included above, and the fact that in a majority of instances where lands or buildings have been given they have simply been so reported, unaccompanied by estimates of their value, lead to the belief that it is not unsafe to estimate that the sum above reported does not represent more than about one-half the amount received by the public libraries of the United States from the benefactions of individuals, or that the real amount is nearer \$30,000,000 than \$15,000,000. And this does not include the books contributed from time to time, the number of which, in the present state of library statistics, it is simply useless to attempt to ascertain or estimate. Comparatively few libraries have the time to make an accurate return of such gifts covering the whole lifetime of their libraries, and many are debarred from doing so by imperfection or loss of records.

It is fairly estimated that, of the gifts of money, land, and buildings above recorded, at least five-sixths have been received within the last thirty-five years.

It must be remembered that the above figures rigorously exclude all grants or other Government, State, or municipal aid, and include only private benefactions.

## LOSS AND WEAR OF BOOKS IN CIRCULATION.

The following table has been prepared to show the losses sustained by public libraries through the negligence, dishonesty, or other default of

borrowers, and through the ordinary wear of books in circulation. The statistics of twenty-three libraries for different periods varying from one to eighteen years are presented. These libraries are conducted in the most liberal spirit as regards affording facilities to borrowers; many of them are free to all the inhabitants of the towns and cities in which they are situated; some of them are in small towns, others in large cities; they reach all classes of population in city and country; of all trades and occupations, and all grades of culture and refinement.

The table shows that out of a total circulation of 6,475,346 volumes, 3,068 were lost through borrowers, and 9,089 were worn out, being a total loss of 12,157 volumes, or less than two-tenths of one per cent., a considerably smaller percentage than the loss of a like amount of paper currency in circulation during the same period. And it appears that nearly three times as many books wear out in honorable service as are lost through carelessness and dishonesty.

This seems to prove three things; first, that the borrowers from American public libraries are decently honest; second, that they appreciate and treat, as they deserve, the books they read; third, that the administration of these twenty-three public libraries, at least, is efficient and vigilant.

These things being true, it appears that the managers of all public libraries need not hesitate to open wide their doors and bid the public enter. Fidelity to their trust does not require that the way of the reader should be hedged about by illiberal restraints and requirements, but is consistent with his most liberal treatment.

*Loss and wear of books in circulation of twenty-three libraries.*

| Place.                  | Name of library.        | No. of years. | Circulation in aggregate during period. | No. of volumes lost. | No. of volumes worn out. | No. of volumes worn out not replaced. | No. of volumes worn out and replaced. |

## CLASSIFIED STATISTICS OF CIRCULATION.

There is a widespread desire to know the value of public libraries as expressed by the relative extent to which particular departments of literature are used by readers. "In what proportion are different kinds of books taken from the libraries and read?" This question is the one oftenest asked in one form or another, and the most correct answer that can be given is, "No one knows." After statement of several of the reasons why no general answer can be given, the results of certain investigations will be presented.

If all libraries contained only books on science, or history, or if all the books were novels, the problem would be considerably simplified, as also if only two or three well defined departments of literature existed, for readers would be bound by a sort of "Hobson's choice;" and it may

be noted as particularly true now that readers often take what they can get instead of what they would best like.

It is rare to find two libraries, unless they were arranged by the same person, that present the same classification of books. Diversity of classification, arising usually from considerations of convenience, doubtless well enough in itself, is fatal to any attempt at combining statistics so that they will show truly the percentage of different kinds of books read. The remoter question of the assignment of books to classes—for what one librarian classes as Science, another may class as Theology, and what he calls Science a third may call Philosophy—need not be discussed here. There are difficulties enough in the case already.

The following classification has been adopted for the purpose of keeping statistics of circulation in the Chicago Public Library, viz: History and biography; voyages and travels; science and art; poetry and drama; German, French, and Scandinavian literature; English prose fiction and juveniles; miscellaneous—seven in all.

The same classification was adopted for the Cincinnati Public Library.

The Mercantile Library of San Francisco is divided into 14 classes, viz: Romance; juvenile; travels; biography; belles-lettres; science; history; poetry; miscellaneous; Spanish; French; German; religion; periodicals.

The Mercantile Library of Baltimore enumerates 16 classes, viz: Art and architecture; arts and sciences; biography; drama; essays; history; medicine; natural history; philology; philosophy; poetry; politics; polygraphs; prose fiction; theology; voyages and travels.

The Mercantile Library of New York is divided into 10 classes, viz: Arts; biography; history, geography and travels; literature; mathematics; medical sciences; mental and moral science; natural sciences; political science; theology.

The classification of the popular department of the Boston Public (Central) Library, for the purpose of keeping statistics of use, is as follows: Sciences, arts, professions; American history and politics; foreign history and politics; poetry, drama, rhetoric, miscellaneous essays, etc.; prose fiction for adults; prose fiction for youths; biography; travels, voyages, etc.; collections, periodicals, etc.; French, German, and Italian books—ten in all.

The Indianapolis, Ind., Public Library has adopted the following classification: Fiction; German and French; poetry and drama; science and arts; voyages and travel; history and biography; miscellaneous.

Sufficient examples have been given to show the hopelessness of any effort to reconcile the statistics of circulation of different public libraries unless greater uniformity of classification is found practicable by librarians.

It may be remarked that so far as the classification is reported by the smaller public libraries, equal differences appear. The same is true of British Free Libraries, the reports of many of which have been examined.

But suppose that all the difficulties of classification had been overcome; that all librarians had agreed to divide literature into the same classes, and that substantial uniformity of assignment to the different classes had been secured. There is still another difficulty, by no means insignificant, in the way of finding out what and how much people read. The volume has thus far been always used as the basis of library statistics—a library owns so many volumes, it circulates so many volumes. Now, the number of volumes of books read is no more a true and definite criterion of the actual amount of reading in any department of literature than is the number of potatoes of all sizes in a barrel the measure of its weight. Popular books, those most read, appear oftenest in new editions. The more popular an author, the more likely that one may obtain his works, or any separate work, in about as many volumes as one chooses. One library will have, say two editions, one in one volume, the other in six volumes; a larger library may have a half dozen editions of the same author, each comprising a different number of volumes. For instance, there are at least 23 editions of Scott's novels in the American market, in different styles, comprising 1, 4, 6, 10, 12, 23, 25, 26, 48, and 50 volumes, respectively. Cooper's *Leather-Stocking Tales* or his *Sea Tales* may be had in one or five volumes. Nine different editions of Bulwer afford choice of his complete works in 1, 22, 23, 24, 43, or 46 volumes. Dickens's works may be found in 6, 7, 8, 13, 14, 15, 17, 18, 19, 20, 21, 22, 28, 29, 30, 34, 35, 55, 56, or 92 volumes. The Boston Athenæum has Dickens's *American Notes* in 1 and 2 volumes, respectively; *Bleak House* in 1 and 4; *David Copperfield* in 1 and 3, etc. In the Boston Public Library the reader will find Dickens's works in 53 volumes; he may get a copy of *David Copperfield* in 1 volume, or 2, or 4, as he chooses, and so on. When it is remembered that from 70 to 80 per cent. of all the books taken from public libraries comprise works of fiction, it must be admitted that this matter of different editions consisting of different numbers of volumes presents a practical difficulty of considerable moment.

The fifteenth annual report of the Boston Public Library contains some interesting statistics of the circulation in that year, prepared by Mr. Winsor, then chairman of the examining committee. Speaking of the relative popularity of different authors as exhibited by the returns, Mr. Winsor said :

Of course, this return must be taken cautiously, as showing the relative popularity of the several authors. To be accurate, it should be certain that the library is supplied with copies of each relative to the demand; and regard must also be had to the fact whether an author's works are in one or two volumes, since the return is by volumes and not by books.

In many libraries the force supplied is only sufficient to attend to the ordinary details of administration, though by the application of some such ingenious device as that used by Mr. Poole in the Chicago Public Library, the work of keeping the statistics of circulation would consume

but little time. In a letter on the subject of library statistics, Mr. Poole writes :

What is needed is some uniform method of keeping statistics of circulation. I keep seven items: 1. History and biography; 2. Voyages and travels; 3. Science and art; 4. Poetry and drama; 5. German, French, and Scandinavian literature; 6. English prose fiction and juveniles; 7. Miscellaneous. I have a box with seven compartments, and, as a book goes out, a pea is dropped by the attendant into one of the compartments. These peas are counted at night and recorded. If this or some other system could be generally adopted, we could have some uniform statistics of libraries. Cannot some uniform system be initiated? It must be very simple and the classes few, otherwise it will not be adopted.

It may be remarked that though the classification of books as German or French, etc., seems natural enough, and the statistics of use of such books are interesting, they are not congruous with statistics which divide literature into departments; *e. g.*, to say only that 1,000 French books have been circulated leaves the fact as to what proportion of history, biography, etc., they comprise, unknown.

The following statistics are presented with much hesitation and must be received with great caution.

The classification adopted in the first table is not regarded as a model, and it is hoped that by comparison of views librarians will be able to agree on one much better. In several instances the statement has been made up from published reports of the libraries, and related classes have been combined in order to preserve uniformity. It is believed that the average percentage of fiction read is rather understated than placed too high.

Classified statistics of circulation of twenty-four public libraries in 1874-75.

| Place.             | Name of library.                      | Population represented by readers. | Circulation, 1874-1875. | Percentage of circulation by classes. |                        |                      |                  |                                       |                   |                               |                |

\* In statistics of use as well as in all other branches of library statistics and reports, the Boston Public Library stands justly pre-eminent. The table here printed, showing the reading of the popular department of the Central Library from 1868 to 1875 by classes, is taken from the last annual report of Justin Winsor, superintendent.

† The columns of "Loans returned" do not include the books taken and returned the same day.

‡ A comparison of this table with those showing the classifications of the reading at the branches indicates the beneficial effects of the notes in the Lower Hall Class-list for History, Biography, and Travel, which has reduced materially the percentage of fiction used, while it is maintaining its old predominance, and, in some cases, increases in the branches.

An examination of the statistics referred to in the third note to the foregoing table affords the following results, the figures being percentages :

| East Boston Branch :                | 1873. | 1874. | 1875 |
|-------------------------------------|-------|-------|------|
| Prose fiction and juveniles.....    | 82    | 79    | 80.5 |
| History.....                        | 2     | 2+    | 2+   |
| Biography.....                      | 1     | 1+    | 1+   |
| Travels, voyages.....               | 3     | 3—    | 2+   |
| South Boston Branch :               |       |       |      |
| Fiction and juveniles.....          | 78    | 78+   | 78+  |
| American history and biography..... | 2+    | 2+    | 2+   |
| Foreign history and biography.....  | 2     | 2+    | 2+   |

| Biography.....                      |       | 2+    | 2    |
| Travels.....                        |       | 4+    | 3+   |

Brighton Branch, 1874-75 :

Fiction, 84, biography, travel, and history, 7; others, 9.

Dorchester Branch, 1874-75 :

Fiction and juveniles, 83+; history, 2+; biography, 2+; travels, 3+.

It is proper that reference should be made to the changes brought about in the character of the circulation of the Boston Public Library by means of the quarterly bulletins and the admirable class catalogues prepared for readers by Mr. Winsor, particularly the Class-list of History, Biography, and Travel. The influence of the last named is thus adverted to in the annual report of the library for the year 1874:

In August last, the long delayed consolidated Class-list of Books in History, Biography and Travel, in the Lower Hall, was ready for the public. The new features in popular cataloguing which it presented soon produced the results which were hoped for. The notes appended to the principal cross references, and intended to assist readers in the choice of books, had a very marked effect upon the character of the circulation in the Lower Hall. As these notes were also intended to bring more prominently before the class of readers which frequents that department the resources of the higher classification of the Bates Hall, a considerable share of the increase of use of that hall must be ascribed to the influence of these notes, though from statistics it is not easy to indicate the proportions. In the Lower Hall, however, the figures of the circulation can be brought to a demonstration. Although but eight months of the year are covered by its effects, the returns of the entire year show an increase over last year of books used in those departments of 75 per cent., while the additional use of fiction is less than 3 per cent.

It has also resulted in reducing the percentage of fiction issued in the popular department (Lower Hall) of the Central Library to less than 72 per cent. of the entire issues of that collection, which is several hundredths below the average maintained in the past or ordinarily found in free public libraries. Taking the entire reading of the Central Library, the use of fiction is probably not far from 55 per cent. of the whole issues.

In the report for 1875, the superintendent, referring to the influence of the bulletins and of the Class-list of History, Biography, and Travel, remarks :

For the first four months the increase of use of the books in these classes over the corresponding period of the previous year was about 160 per cent.; and not more than

2 or 3 per cent. of this can be attributed to the increased circulation of that department. For the next eight months of the year, that is, from September, 1874, to April, 1875, the relative effect was diminished, because the same catalogue was in use the previous year in corresponding months. With this disadvantage, the accumulative gain in inciting readers to a better choice of books is shown by an increase of 23 per cent. in these classes of books, of which not more than 6 or 7 per cent. is due to the general increase of reading. . . . The use of fiction and juveniles has been reduced during the year in an unprecedented manner. Having been as high as 78 per cent., it is now reduced to 69, and the gain has been entirely in the department of history, biography, and travel.

The following, from the superintendent's monthly report for April, 1876, shows by months the gain in the use of books in the classes of history, biography, and travel, resulting from the use of the class catalogue, and suggests to librarians a practical means of lessening the demands of readers on the department of fiction and increasing their requisitions on what may be termed more useful classes of reading:

The relative increase by months of the whole circulation [reckoning by books for home use returned] of the Lower Hall, and that of those alcoves in it devoted to history, biography, and travel, over the circulation of corresponding months last year, as shown in the following table, indicates the results of efforts to induce borrowers to read less fiction and more of other books, by giving them assistance in the choice of books through the catalogue notes printed in the new Catalogue for Books in the Classes of History, Biography, and Travel:

| Increase in per cent. —               | November | December | January | February | March | April | May | June | July | August | September | October | Year.   |
|---------------------------------------|----------|----------|---------|----------|-------|-------|-----|------|------|--------|-----------|---------|---------|

The Lower Hall Catalogue for History, Biography, and Travel, above referred to, was issued in the middle of August, 1873, so that the increase of use of books in those departments since August, 1874, shows the gain by continued use, and not, as before, the gain over corresponding months when it was not in use.

#### LIBRARY OF THE DEPARTMENT OF THE INTERIOR.

The following tables, kindly furnished by Rev. J. G. Ames, librarian, exhibit the quarterly circulation of the Library of the Interior Department for the year ending March 31, 1876. This library is free to all employés of the Department, and the statistics of its use are of special interest as showing the kinds of books chosen by a particular class of persons, namely, the clerks of the Department. It appears that fiction holds its relative place in circulation here as compared with other public libraries; about 76 per cent. of the books taken out being of that class.

These statistics have been prepared with great care, and are believed to be correct.

Statistical report of the Library of the Department of the Interior for the quarter ended June 30, 1875.

| Classes of books in the library. | Borrowers. |        | Total of volumes taken. | Percent circulation by classes. | Volumes kept too long. |        | Loans renewed. |        | Number of vol. in library. | Number of vol. not taken. | Author preferred.                               | Book most frequently taken.            |

"Sibyl Huntingdon," Dorr, was out fourteen times; "Story of a Millionaire," Mühlbach, was out thirteen times. The following named were each out twelve times: "Ralph, the Hero," Trollope; "Idalia," "Ouida," "Woolcraft," Simms; "From my Youth Up," "Marian Harland," "Within an Ace," Mrs. Jenkins; "Dallas Galbraith," Mrs. Davis, and "Paul Massie," McCarthy. Each of the following named was out eleven times: "Little Dorrit," Dickens; "Pascarel," "Ouida," "Philip Earncliffe," Mrs. Edwards; "Woman against Woman," Miss Maryat; "True as Steel," "Marian Harland," and "Kenneth, my King," Miss Brock.

## SOME ANALYSES OF LIBRARY REPORTS.

Most people have a superstitious regard for statements expressed by combinations of Arabic numerals, and accept them with an unflinching faith; the array of imposing columns is rarely challenged, and still less often disturbed. Blank spaces in such columns, however, mar their symmetry and evoke criticism. One ingenious statistician recognizing this fact, and himself disliking the appearance of these spaces, contrived, it is said, to fill them, and probably few who read, and none who quote, his figures, know the extent to which his ingenuity was exercised. The making of a statistical table could not have been particularly difficult for him, but to one who appreciates the wide difference between a reported fact and an estimate of what a fact might be, if reported — in other words, the distinction between true and false statistics — the task is anything but easy.

A notice of Rhees's *Manual of Public Libraries*, etc., published in 1864, contains the following:

The information it embodies, though very valuable and full as regards many libraries, is very incomplete, as may be seen from the fact that, while it gives the names of 2,902 libraries of all sizes, it records the number of volumes in only 1,333 of them, leaving the large proportion of 1,564 unreported. The failure to respond to circulars of inquiry was the cause of this deficiency.

Mr. Rhees labored under great difficulties, as every one must who undertakes to explore a new field and gather statistics about anything; the difficulties had rather increased than diminished, when, in 1870, the Bureau of Education began to publish reports of public libraries. Rhees was able to get returns of the number of volumes from only 40 per cent. of the libraries then known to exist; in 1871 the Bureau of Education published the number of volumes in nearly 97 per cent. of the libraries that made reports, indicating a great increase of interest on the part of librarians.

In 1871 a circular embracing 13 questions was sent to all known public libraries, and answers were received from 180. A brief statement of the results obtained with this small number of inquiries will indicate in a general way the difficulties attending any effort to present satisfactory library statistics. The questions related only to the ordinary affairs of a library, and it would seem that all of them might have been easily answered by each of the libraries reporting. Of the 180 libraries, however, only three answered all the questions of the circular. The result may be summed as follows: Total number of questions asked, 2,340; number of the questions answered, 1,654; number of questions not answered, 686; percentage of questions answered, 70.6; percentage of the questions not answered, 29.4. The main difficulty is, then, not in any disinclination on the part of librarians to furnish some sort of statistics of their libraries; but rather in the quite general neglect or inability to keep statistics which might enable them to give distinct information on some of the most important questions of library economy. As, however, but a small part of our libraries furnished statistics for

publication in 1871, a further effort was made in 1872 to collect the statistics of public libraries. A schedule of questions was prepared, after consultation with experienced librarians. This schedule embraced 71 questions—a larger number than any one library, perhaps, could be expected to answer—the evident design being to bring together in one form the main questions applicable to the affairs of libraries belonging to different classes and differing in management and purpose. Three hundred and six libraries responded more or less fully to this series of questions. An analysis of the returns was carefully prepared, the libraries being, for the sake of convenience, divided into fourteen general classes. The whole number of questions to each class was, respectively, as follows: To free public libraries, 5,112, of which 3,470 were answered; but as only 4,752 appeared to be applicable to that class, nearly 93 per cent. of these were answered; in the second class there were 6,235 questions, 5,865 of which are regarded as applicable, and of these 4,177, or about 67 per cent., were answered; of the third class there were 22 libraries, the number of questions therefor being 1,562, of which 1,472 were considered pertinent, and of these about 70 per cent. were answered; there were 29 libraries in the fourth class, and replies were received to about 57 per cent. of the questions considered applicable; in class five were 5 libraries, the whole number of questions being 355, and 300 of them applicable, of which number 232, or more than 77 per cent., were answered; there were 15 of the sixth class; the whole number of questions therefor was 1,065, and of these 870 are supposed to apply to that class, which forms a percentage of about 81; in the seventh class, making but 5 libraries, 305 questions were considered to apply, and of these a little more than 95 per cent. were answered; in the eighth class were 3 libraries, which it was thought should have replied to 177 of the queries, when in fact they replied to only a little more than 81 per cent.; of the whole number of questions considered to apply to the ninth class 792 were answered, or about 56 per cent.; of 12 libraries belonging to historical societies, (class ten,) 852 questions were asked, 792 of which were thought to be pertinent, and of these about 53 per cent. were answered; of the libraries of class eleven 69 per cent. answered the questions considered to be applicable; of the twelfth class 81 per cent. replied to what were deemed the questions pertinent to that class; of the thirteenth class 60 per cent. answered. Besides these there were 7 libraries that could not be classified, and for the sake of accuracy it is not thought best to present any analysis of them.

The following, selected from the elaborate analysis furnished by an accomplished statistician, will show further results and illustrate the nature of the work. It may be said that the whole number of questions subjected to analysis was 32,266, and the proportion of omissions does not vary materially from those presented below:

*Question 3.*—When was the library founded?

This question is applicable to all public libraries. Of the 306 libraries reporting, 23, or about 7.5 per cent., failed to furnish this information.

*Question 6.—Amount of permanent fund ?*

Of the 306 libraries reporting, 77, or 25.2 per cent., failed to answer this question ; 229, or 74.8 per cent., having answered. Of the 229 libraries answering this question, 102, or 44.5 per cent., had each a permanent fund, and 127, or 55.5 per cent., had no permanent fund.

The aggregate amount of permanent fund of those answering was \$2,647,737, making the average to each of the libraries answering this question \$11,562; and the average to each of the 102 libraries having a fund, \$25,958.

*Question 7.—Amount of annual income ?*

Of the 306 libraries reporting, 93, or 30.4 per cent., failed to answer this question ; 213, or 69.6 per cent., answered. Of the 213 libraries answering, 89, or 41.8 per cent., replied affirmatively, and 124, or 58.2 per cent., replied negatively.

The aggregate amount of income of those answering was \$213,671, making the average to each of the 213 libraries answering this question \$1,003, and the average to each of the 89 libraries answering affirmatively, \$2,401.

*Question 9.—Does the library receive State or municipal appropriations ?*

Of the 306 libraries reporting, 105, or 34.3 per cent., failed to answer this question ; 201, or 65.7 per cent., answered. Of the 201 libraries answering, 72 replied affirmatively, and 129 negatively.

*Question 10.—Amount received from donations ?*

Of the 306 libraries reporting, 140, or 45½ per cent., failed to answer this question ; 166, or 54½ per cent., answered. Of the 166 libraries answering, 48, or 29 per cent., had received donations ; 118, or 71 per cent., had not. The aggregate amount of donations reported was \$46,869.

*Question 11.—Number of volumes in library ?*

No library failed to answer this question ; and the aggregate number of volumes reported by the 306 libraries was 3,998,663, making an average for each of 13,063 volumes.

*Question 12.—Number of pamphlets in library ?*

Of the 306 libraries reporting, 116, or 37.9 per cent., failed to answer this question ; 190, or 62.1 per cent., having answered. Of the 190 libraries answering this question, 143, or 75.26 per cent., had pamphlets, and 47, or 24.74 per cent., had no pamphlets.

The aggregate number of pamphlets in libraries of those answering was 907,952, making the average to each of the 190 libraries answering this question, 4,763, and the average to each of the 47 libraries having pamphlets, 6,353.

*Question 18.—Increase of books in year by purchase ?*

Of the 306 libraries reporting, 133, or about 43½ per cent., failed to answer, and 173, or about 56½ per cent., answered. The aggregate additions to these libraries numbered 160,695 volumes.

*Question 19.—Increase of pamphlets in the year by purchase ?*

To this question, 248, or about 81 per cent., of the 306 libraries failed to respond ; while 58, or about 19 per cent., furnished replies, showing that they had acquired in the period named, in the aggregate, 11,650 pamphlets.

*Question 20.—Annual increase of books by donation.*

This question was not answered by 154, or about 50½ per cent., and was answered by 152, or about 49½ per cent., of the 306 libraries ; the latter proportion reporting, in the aggregate, 32,838 volumes received by donation.

*Question 21.—Number of pamphlets donated.*

Of the 306 libraries, 219, or nearly 72 per cent., did not, and 87, or a little more than 28 per cent., did answer this question ; of the libraries answering the question, 63 received such donations, which numbered in the aggregate 42,123 pamphlets.

*Question 38.—Average number of readers in the year.*

Of the 306 libraries reporting, 171 libraries, or 56 per cent., failed to answer this question, 135 libraries, or 44 per cent., having answered.

The aggregate number of readers in the year of those answering was 286,097, making the average 2,119 to each of the libraries answering.

*Question 33.—Number of subscribers?*

Of the 306 libraries reporting, 161, or 53 per cent., failed to answer this question; 145, or 47 per cent., answered. Of the 145 libraries answering, 103, or 74 per cent., reported subscribers, and 37, or 26 per cent., had no subscribers. The aggregate number of subscribers of those answering was 83,023, making the average to each of the libraries having subscribers 573.

*Question 41.—Annual subscription?*

Of the 306 libraries reporting, 167 libraries, or 55 per cent., failed to answer this question; 139, or 45 per cent., answered. Of the 139 libraries answering, 119, or 86 per cent., described themselves as subscription libraries, and 20, or 14 per cent., required no subscription.

The average subscription for each individual to the 119 libraries of this class answering was \$3.53.

*Question 46.—Average weekly circulation of books?*

Of the 306 libraries reporting, 119, or 39 per cent., failed to answer this question; 187, or 61 per cent., answered. Of the 187 libraries answering, 180, or 96 per cent., were lending libraries.

The aggregate weekly circulation of those answering was 120,817, making the average to each of the libraries answering this question 694, and the average to each of the 180 circulating libraries 721 volumes.

*Question 48.—Average weekly number of books used at library?*

Of the 306 libraries reporting, 247, or 81 per cent., failed to answer this question; 59, or 19 per cent., answered. Of the 59 libraries answering, 45, or 76 per cent., replied that books were used at the library, and 14, or 24 per cent., replied that no books were so used.

The aggregate number of books per week of those answering was 24,472, making the average to each of the 59 libraries answering this question 415, and the average to each of the 45 libraries reporting books so used, 5,447.

*Question 58.—Does the library invite readers and borrowers to nominate books for purchase?*

Of the 306 libraries reporting, 87, or 28.4 per cent., failed to answer this question; 219, or 71.6 per cent., answered. Of the 219 libraries answering, 190, or 85.5 per cent., replied affirmatively, and 29, or 13.2 per cent., replied negatively.

*Question 65.—Is the library subject to State or municipal taxation?*

Of the 306 libraries reporting, 45, or 14.7 per cent., failed to answer this question; 261, or 85.3 per cent., answered. Of the 261 libraries answering, 21, or 8 per cent., replied affirmatively, and 240, or 92 per cent., replied negatively.

*Question 66.—Does the library own its building?*

Of the 306 libraries reporting, 92, or 30 per cent., failed to answer this question; 214, or 70 per cent., answered. Of the 214 libraries answering, 75, or 35 per cent., replied in the affirmative, and 139, or 65 per cent., replied in the negative.

*Question 68.—Is the building fire-proof?*

Of the 306 libraries reporting, 43, or 14 per cent., failed to answer this question; 263, or 86 per cent., answered. Of the 263 libraries answering, 50, or 19 per cent., reported that their buildings were fire-proof; 209, or 79.5 per cent., reported that their buildings were not fire-proof; and 4, or 1.5 per cent., reported that their buildings were "nearly" fire-proof.

*Question 70.—Annual cost of administration?*

Of the 306 libraries reporting, 97 libraries, or 31.7 per cent., failed to answer this question; 209 libraries, or 68.3 per cent., answered. Of the 209 libraries answering, 191, or 91.4 per cent., reported this item, and 18 libraries, or 8.6 per cent., reported that there was no expenditure for administration. The total cost of administration of the libraries reporting was \$530,294, the average for the 191 libraries severally reporting the annual cost being \$2,776.

## Summary statement of expenditures by the General Government for libraries and sundry publications, from 1880 to 1874.

| For libraries.  | Balances.  | Amount of annual appropriation. | Expenditure by warrants. | Repayments. | Amount carried to the surplus fund. | Net expenditures. |
|---|------------|---------------------------------|--------------------------|-------------|-------------------------------------|-------------------|
| Salary of the principal and assistant librarians.....   | \$1,788 63 | \$464,925 13                    | \$454,212 00             | \$442 06    | \$8,960 47                          | \$454,176 63      |
| Purchase of books for Library of Congress.....  | .....      | 229,203 05                      | 291,504 21               | 5,044 15    | 2,742 99                            | 286,460 06        |
| Increase of the library.....  | 1,500 00   | 70,048 12                       | 65,542 12                | 20 88       | 3,020 88                            | 65,527 24         |
| Purchase of law books for Library of Congress.....  | .....      | 66,500 00                       | 69,011 45                | 2,511 45    | .....                               | 66,500 00         |
| Contingent expenses of the library, etc.....  | .....      | 61,418 71                       | 62,744 56                | 2,312 31    | 385 21                              | 60,532 57         |
| For paper and printing a complete catalogue of books in the Library of Congress.....                                | 501 25     | 15,673 00                       | 15,795 60                | 441 44      | 318 84                              | 15,354 16         |
| Dismantling the late library room of Congress.....  | .....      | 700 00                          | 689 23                   | .....       | 10 77                               | 689 23            |
| Paper, printing, and binding for the Library of Congress.....   | .....      | 1,981 25                        | 1,981 25                 | .....       | .....                               | 1,981 25          |
| Fitting up rooms in north wing of the Capitol for temporary reception of the library.....                           | .....      | 912 86                          | 912 86                   | .....       | .....                               | 912 86            |
| Furniture for Library of Congress.....  | .....      | 1,885 00                        | 1,885 00                 | .....       | .....                               | 1,885 00          |
| Two stoves and coal for Library of Congress.....  | .....      | 295 25                          | 295 25                   | .....       | .....                               | 295 25            |
| Enlarging the law library, constructing a new stairway, etc.....  | .....      | 2,412 00                        | 2,412 00                 | .....       | .....                               | 2,412 00          |
| Expenses incurred in extinguishment of the fire in the library room at the Capitol.....                             | .....      | 5,000 00                        | 5,000 00                 | .....       | .....                               | 5,000 00          |
| Fitting up the document room, etc., to receive temporarily a portion of the books in the Congressional Library..... | .....      | 1,200 00                        | 1,138 43                 | .....       | 61 57                               | 1,138 43          |
| Repairs of congressional library room, destroyed by fire.....   | .....      | 96,500 00                       | 96,500 00                | .....       | .....                               | 96,500 00         |
| Purchase of books, contingent expenses, and purchase of furniture.....  | .....      | 75,000 00                       | 75,000 00                | .....       | .....                               | 75,000 00         |
| Percentage on salaries of librarians, messengers, etc.....  | .....      | 773 00                          | 773 00                   | .....       | .....                               | 773 00            |
| Purchase of Spanish and Mexican law books for Library of Congress.....  | .....      | 1,700 00                        | 1,700 00                 | .....       | .....                               | 1,700 00          |
| To provide additional furnaces for Library of Congress.....   | .....      | 1,500 00                        | 1,500 00                 | .....       | .....                               | 1,500 00          |
| Expenses of procuring apparatus for warming and fuel, Library of Congress.....                                      | .....      | 5,000 00                        | 6,150 30                 | 2,512 30    | *1,362 00                           | 3,638 00          |
| Enlarging and shelving the law library room, new carpet, and other furniture.....                                   | .....      | 400 00                          | 400 00                   | .....       | .....                               | 400 00            |
| Compensation of fireman and coal for the furnaces, Library of Congress.....   | .....      | 1,200 00                        | 1,200 00                 | .....       | .....                               | 1,200 00          |
| To fit up with shelves the two rooms at the south end of Library of Congress.....                                   | .....      | 270 00                          | 270 00                   | .....       | .....                               | 270 00            |
| Compensation of two laborers employed in the Library of Congress.....   | .....      | 1,000 00                        | 1,000 00                 | .....       | .....                               | 1,000 00          |
| Coal and fireman to warm the Library of Congress.....   | .....      | 6,459 65                        | 6,459 65                 | 1,590 00    | 1,590 00                            | 4,869 65          |

**SUMMARY OF EXPENDITURES BY THE GENERAL GOVERNMENT FOR  
LIBRARIES AND SUNDRY PUBLICATIONS, FROM 1800 TO 1874.**

In presenting the foregoing statement, prepared in the Department of the Treasury at the request of the Bureau of Education, through the honorable Secretary of the Interior, but a single remark is necessary. Captain Bayley, under whose immediate direction the statement was made up, while willing to vouch for its correctness so far as it goes, notes the fact that it is necessarily incomplete, owing to the manner of keeping the accounts in the earlier days of the Government. Many books have been bought in all previous years for the different Departments of the Government which, for the want of a definite appropriation for that specific purpose, have been charged to general objects; and hence such expenditures cannot be made to appear in the statement. The aggregate expenditure reported above for these objects is \$3,326,497.70.

# CHAPTER XXXVIII.

## PUBLIC LIBRARIES OF TEN PRINCIPAL CITIES.

---

BY SEVERAL CONTRIBUTORS.

---

### I.—PUBLIC LIBRARIES OF BALTIMORE.

BY G. L. SMITH.

#### PEABODY INSTITUTE OF THE CITY OF BALTIMORE.

The institute was founded in 1857, by George Peabody, then of London. In that year he selected twenty-five prominent gentlemen of Baltimore to be trustees of the institute and placed in their hands \$350,000; his further gifts of money and bonds increased the total endowment to \$1,400,000.

A lot of ground including two dwelling houses was purchased, for the sum of \$106,547.83, and the first wing, fronting on Mount Vernon Place, was commenced in 1858. This wing, built of white marble, was completed in 1861, and cost, with furniture, \$182,000.

In May, 1861, the building was ready for use, and the first librarian of the institute, Rev. Dr. John G. Morris, entered upon his duties.

The first books received were the works of John Adams, in ten volumes, presented by Hon. Anthony Kennedy. This year was devoted by the librarian to the preparation of an index of books to be purchased, comprehending about fifty thousand volumes, to form the nucleus of a library of reference. It was intended to embrace the best editions of the standard authors and classics in all branches of knowledge, and preference was to be given to the latest and most critical of each. Dictionaries, encyclopædias, gazetteers, and the important works on philology were to be procured at once, and made accessible to students. For the first year the library grew but slowly; the work of preparing for and planning the organization, studying library economy, furnishing the apartments, and conferring with librarians in the centres of learning, occupied all the time of the librarian, so that during 1861 only one hundred and thirteen volumes were collected. In 1862 the librarian was aided by an assistant, and the work in the library was regularly carried on. Dr. Morris visited Philadelphia, New York, and Boston, and bought several large boxes of books. The yearly growth of the library and the total expenses are shown in the tables following.

In October, 1866, the library was first formally opened to the public,

with a librarian and two assistants, and was kept open daily thereafter from 9 a. m. till 4 p. m. From November, 1867, to November, 1872, the librarian had three assistants, and since then has had five. The library contains 57,458 volumes, and 8,298 unbound pamphlets, besides those which are bound in classes and included in the count of volumes. One hundred and twenty periodicals are regularly taken, of which thirty-three are American, forty-six English, twenty-four French, sixteen German, and one Italian. Besides these, the publications of learned societies and works issued by literary clubs and associations in various languages, amount to one hundred and sixty-six, making a total of two hundred and eighty-six serials, costing \$1,449.28 a year.

The following figures show the ratio between the number of readers and the number of volumes used :

| Year.     | Persons. | Volumes. |
|-----------|----------|----------|
| 1871..... | 2,582    | 17,104   |
| 1872..... | 2,951    | 21,146   |
| 1873..... | 3,018    | 24,007   |
| 1874..... | 2,381    | 32,944   |

Not much more than one-tenth of the reading here is of fiction.

The library is much used by students, and the teachers and pupils of the various educational institutions of the city avail themselves of the collection.

The following is a table showing the number of volumes read on different subjects during the past year:

| Subject.   | Volumes. | Subject.                                | Volumes. |
|--|----------|---|----------|
| Agriculture.....                                 | 135      | Industrial arts.....                    | 145      |

The library is used entirely for reference, and is open, free to everybody, during the winter from 9 a. m. till 10 p. m., and in the summer from 9 a. m. till 6 p. m.

It has sets of United States, British, and French patents.

The bibliographical collection comprises about one-seventh of the entire library. Readers are requested to name books of which they themselves have felt the need or desire.

There is an extensive card catalogue of the books, pamphlets, maps, etc., arranged alphabetically, both according to subjects and authors, but as yet no printed catalogue.

The library owns its own building, which is not fire-proof.

The chief librarian, at present Mr. P. R. Uhler, is chosen by the board of trustees, to whom and through the provost he is responsible. For the annual cost of administration, etc., see the annexed table.

Liberal provision has been made since 1866 for supplying the public with a yearly course of lectures. Distinguished men in every department of literature, science, and art, have been engaged; and the increased interest in subjects hitherto considered too abstruse for popular lectures shows what a means of general culture these discourses have proved. The trustees have carried out Mr. Peabody's design as nearly as possible in making the lectures almost free, \$1.50 being all that is charged for the entire course of over thirty lectures, or less than 5 cents for each lecture. The same may be said of the beneficial effects of its Conservatory of Music. Symphony concerts were almost unknown in Baltimore before the establishment of the Conservatory. Although these concerts were at first unappreciated, the present standard of popular taste demands the highest excellence in this department.

The Academy of Art is yet in an incipient state, though there are many valuable additions made to it every year.

For statistics in these departments see the table annexed.

## Statistics of Peabody Institute from 1861 to 1875.

| Year.           | Number of volumes. | Amount paid for books. | Number of pamphlets. | Amount paid for pamphlets. | Volumes donated. | Pamphlets donated. | Maps donated. | Library expenses. |

## MERCANTILE LIBRARY ASSOCIATION.

In November, 1839, four or five clerks held a consultation on the possibility of providing a place of evening resort, above the level of the oyster room or theatre, in which clerks could have a more extensive range of reading than their home libraries furnished.

The only public library at the time was the old Baltimore Library, which did not meet the wants of this particular class. Accordingly an association was incorporated January, 1842. Clerks could become active members by paying an initiation fee of \$2 and an annual subscription of \$3 in advance. Merchants and others could become honorary members by the payment of \$5 per annum; but the right of suffrage was extended only to clerks. Success beyond the most sanguine expectations was soon assured. The plan of receiving special deposits of books, on loan, was adopted for a short time, but finally abandoned in 1844, and the books returned to their owners.

The first course of lectures was begun December 1, 1840, on which occasion Hon. John Quincy Adams delivered a lecture on Society and Civilization. This course, which proved to be a pecuniary success, was followed by others; and the association has ever since used every opportunity to provide lectures and readings of the highest merit for the people of Baltimore. At its organization the association occupied rooms on the corner of Baltimore and Holliday streets. After several removals it finally took possession of its present apartments in the Athenæum building, for which this and other associations had solicited subscriptions from citizens of Baltimore, and which was formally dedicated October 23, 1848.

The library is open during the summer months from 9 a. m. to 10 p. m., and during the winter from 10 a. m. to 10 p. m. In 1873 it was opened on Sundays from 2 to 10 p. m., but the small attendance did not justify this innovation, and in June its privileges were again restricted to secular days. The use of the library is extended to the families of the members; and being both a circulating and reference library, a subscriber may take books home, or a clerk, who has no congenial companions at his boarding house, may enjoy them in the comfortable reading rooms of the association. Though there are but 1,648 subscribers, the number of visitors during a year is from 15,000 to 20,000, and the circulation of books about 35,000. Subscribers are allowed to take one volume at a time or two of a set; and are requested to name any book they would like the library to obtain. It contains 31,032 volumes, exclusive of 2,500 duplicates. Of these 400 volumes contain 6,000 pamphlets bound in classes. Twelve hundred foreign and American books and 500 pamphlets are added to the collection every year; about 1,000 of the one and 150 of the other are purchased by the association, and the rest are donations. Of the 31,032 volumes, 600 are in foreign and 590 in modern European languages. There are 1,200 volumes on scientific subjects; 75 per cent. of the books borrowed are English prose fiction. The oldest book in the library was published in 1493.

The bibliographical collection is very small. It has a printed catalogue of a portion of the books and a manuscript catalogue of all, arranged alphabetically, according to subjects and authors.

The library is exempt from taxation. Mr. John W. M. Lee is chief librarian, and has three assistants. The annual cost of administration is \$2,400. Some attempts were made by this association to start classes in French and German, but they proved unsuccessful.

The terms of membership are as follows: Perpetual membership, transferable, \$100; life membership, \$50; annual honorary, \$5; annual proprietary, \$5; annual employé, \$3.

Following is a tabular statement showing what the association has done since its foundation, as nearly as could be ascertained from the records.

## Statistics of the Mercantile Library Association of Baltimore, from 1839 to 1874.

| Year.   | Members. |           | Income.    | Volumes bought. | Volumes donated. | Volumes in library. | Cost and binding. | Lectures. | Money donated. | Expenses. | Use of library. | Pamphlets. |

## MARYLAND INSTITUTE FOR THE PROMOTION OF THE MECHANIC ARTS.

This is a name that has been applied to two different associations which have existed in this city. The earlier was primarily due to the exertions of John H. B. Latrobe, Fielding Lucas, jr., and others, who called a meeting in 1825. This society was incorporated in 1826, and continued with great success until February, 1835; when the building occupied by the institute, called the Athenæum, and situated on the southwest corner of St. Paul and Lexington streets, was burned, and the entire property of the old Maryland Institute was destroyed.

In November, 1847, a call was issued, signed by Benjamin S. Benson, and 69 others, for a meeting of all persons favorable to forming a Mechanics' Institute. At this meeting, which was held December 1, 1847, John H. B. Latrobe delivered an address explanatory of the purposes of the meeting. Eighty names were then enrolled and a committee appointed to draught a form of constitution. The committee made a report on the 22d of the same month, and the constitution submitted was unanimously adopted. The first election of officers took place the 12th of January, 1848, and the 19th of the same month the board met and organized. Its first exhibition was held in Washington Hall in October, 1848, and met with great success, as did those of the two following years held in the same place. After the first year of the formation of the institute, the managers made great efforts to procure a site for a building adapted to their various wants. The enterprise of constructing the building on the site of the Upper Centre Market owes much to the energy of Benjamin S. Benson, to the citizens of Baltimore, (who, having at heart the success of the institute subscribed liberally to stock in the hall,) and to the mayor and city council of Baltimore, which latter assented to the use of the site, and appropriated \$15,000 for the enterprise.

The objects of the institute made it necessary to form a library, and by donations and purchases the nucleus of the present library was formed. When the institute moved from the old post-office building into the new one in 1851, the library, which then numbered about 2,500 volumes, was placed in the third story, but the inconveniences which attended so elevated a position necessitated its removal to its present location. At this time it was kept open from 4 to 6 and from 7 to 9 p. m., and the report states that there were 592 readers who used the library.

The library was and is now supported almost entirely by subscriptions. The price at first was \$2 initiation fee, and \$3 per annum for senior members, and one-half of these sums for junior members; the latter class ultimately including women. At present the fees are \$5 per annum for senior and \$3 for junior members.

In January, 1853, the number of volumes had increased to 3,600; and in 1856 there were 5,245, divided as follows: Science, art, mechanics,

and works of reference, 570 ; law and public documents, 1,800 ; and miscellaneous books available for circulation, 2,875. The readers numbered about 1,000 ; and the number of volumes circulated during the year was about 20,000. In 1857, the late W. Prescott Smith became chairman of the library committee, and under his direction efforts were made to increase the library. Subscriptions of money and contributions of books were solicited. The result was that a cash fund of \$5,000 was raised, and 1,500 volumes and 650 pamphlets contributed. The number of volumes had increased at the end of this year to 10,759. There are at present about 17,000 volumes and 1,600 readers, with a weekly average issue of 850 books. The relative numbers of books read may be stated as follows : Fiction,  $\frac{3}{4}$  ; history and biography,  $\frac{1}{8}$  ; science and art,  $\frac{1}{4}$  ; and the remainder miscellaneous.

The library is now open in summer from 9 a. m. to 8 p. m., and in winter from 9 a. m. to 9 p. m. Members and their families have the privilege of drawing one book at a time, and can keep the same two weeks. The members are entitled, on payment of the fees, to the privileges of the exhibitions and lectures, and by the payment of the small additional fees to any of the schools of the institute. The library has a full set of United States patents, and a very small bibliographical collection. It is not subject to taxation, having been exempted from it by its act of incorporation. The librarian is chosen by the board of managers, and is responsible to the library committee. The catalogue, which was printed many years ago, is alphabetical by subjects.

*Exhibitions.*—In 1851 the first exhibition was held in the present hall. John P. Kennedy delivered the opening address. The exhibition was very successful. It was visited by the President of the United States, his Cabinet, and other distinguished persons. These annual exhibitions continued to be successful for several years, and were largely depended upon as a source of revenue from which to support the other departments, but of late years the public interest in them has been on the wane, and the receipts have come short of the expenditure.

*Lectures.*—Each winter since the inauguration of the institute a course of lectures has been provided for the membership, which has embraced some of the most eminent names in the professional and scientific world. This has always been one of the most attractive inducements to membership, and the large crowds which have invariably attended attest the interest of members.

In 1852, in honor of a liberal donation from Hon. Thomas Swann, it was resolved to establish a Swann professorship of chemistry. This was placed in charge of Campbell Moritt, who resigned before anything practical could be accomplished. Dr. Snowden Piggott was then appointed, who formed a class of 63 students, to whom thirty-six lectures were delivered, the price for the course being \$1. Dr. Piggott resigned, and Prof. Lewis H. Steiner was appointed to the chair. The course of scholastic lectures was abandoned for some unknown reason, and a

popular course substituted. Dr. E. A. Aikin was the next incumbent. Nothing new occurred under his *régime*. Prof. Harry White, on the retirement of Dr. Aikin, was next appointed, and inaugurated a school of practical analytical chemistry. The department is now in charge of Prof. William P. Toney, under whose care it is making considerable progress. The terms are \$15 per quarter.

*Book-keeping.*—A class in book-keeping and penmanship was established in 1856, which at first was quite successful, but afterward fell into a very languishing condition. It is at present, however, very flourishing. The school is in charge of Prof. James R. Webster, and there are 130 pupils. Terms, \$5 for a session of four months.

#### SCHOOL OF DESIGN.

This school was first opened in the present building in 1851, with William Minifie as principal. There were 332 pupils. The school was originally intended for the junior members of the institute, who were admitted free. But it was ascertained that a great many of them came out of idle curiosity, and were inclined to devote their time to mischief rather than to study. This was shown by the fact that at the beginning of the session of 1852 there were 1,100 applicants for seats. The whole resources of the building were taxed to accommodate them, but they fell off in their attendance so rapidly that at the end of the session there were only 300. In order to furnish better facilities for those who really attended for study, it was determined to make the small charge of \$1.50 in addition to that for membership. This had the desired effect, and the next year there were 254 pupils.

In 1856 a day school was established for women and girls. There were at first 63 pupils, and it has been very successful ever since. Many of the graduates are earning good salaries by the practice of the art they learned here. In 1857 the first Peabody premiums were distributed, amounting to \$500, which sum Mr. Peabody made arrangements to continue annually. The number of pupils at present is 450 in the night school, and 75 in the day school.

A class for instruction in modeling in clay has recently been formed, and promises to develop much talent.

This school has educated many trained artisans belonging to the poorer classes of society, and therefore justly claims to be an important factor in social reform. Its graduates occupy honored and lucrative positions as engineers, architects, artists, etc., in this country and in Europe. In addition to the principal, there are eleven assistants. The expense of the school, after deducting the receipts for tuition, is about \$1,500 yearly.

*Membership of the Institute.*—In 1851, there were 632 members; in 1852, there were 1,762; and the membership at present is about 2,500. Two-thirds of this number are junior members.

## THE LIBRARY COMPANY OF BALTIMORE.

In December, 1795, some gentlemen of Baltimore Town became impressed with a sense of the benefits of a public library, and drew up a plan for one which they submitted to several citizens. It was proposed to make a stock company, and provided that every person regularly admitted to membership should be entitled to one \$20 share. Every regular member was required to contribute \$4 per annum for each share he possessed. The books and effects of the company constituted the joint property, and any member was at liberty to transfer his share with the restriction that, except in case of will or descent, the name of the person in whose favor the transfer was made should be approved by the board of directors. No person was allowed to subscribe for more than one share, or acquire others save by inheritance; he was still entitled to but one vote.

In a very few days 59 persons subscribed, and a meeting was called December, 1795, of which Right Rev. Dr. John Carroll was chairman. The library was opened to the members October, 1796, at the house of Mr. Williams, on Lemon street, and the company was incorporated by act of the legislature dated January 20, 1797. In this way was established the first public library of Baltimore. In 1800, it numbered about 4,000 volumes, gradually increasing until it formed a fine collection of the best works of the day and age, which, in the year 1855, was merged and is still preserved in the collection of the Maryland Historical Society. Later there was a provision made in the constitution for those who did not wish to become stockholders by which they could enjoy the privileges of the library by the payment of \$3.50 for six months or \$6 for a year. Through the co-operation of this company with the Historical Society and the Mercantile Library Association, the Athenæum building was built and paid for. This edifice was dedicated October 23, 1848, and accommodates the three above named libraries, the two former now included in the Historical Society. The Library Company adopted the circulating library plan. It contained at the time of its transfer to the Historical Society about 8,000 volumes, not including pamphlets or manuscripts, of which there were but few. The last printed catalogue was issued in 1809, and there is now only a manuscript catalogue, arranged alphabetically according to authors.

## MARYLAND HISTORICAL SOCIETY.

In January, 1844, eighteen or twenty gentlemen met in a room of the old post-office building to organize a society for collecting the scattered materials of the early history of Maryland, and for collateral objects. The organization was completed at the first meeting, and a constitution and by-laws adopted. At the next meeting John Spear Smith was

electel president, John Van Lear McMahon, (the historian of Maryland,) vice-president, and Stephen Collins, librarian.

The establishment of this society gave a stimulus to literary taste in Baltimore which induced nearly all the gentlemen in professional and mercantile life noted for cultivation to become members. In the spring of 1848 the society moved into the Athenæum building, which is held for it in perpetuity by trustees, under a charter granted by the legislature of Maryland, December, 1845. The old Baltimore Library Company and the Mercantile Library Association united with the Historical Society in soliciting subscriptions from the public for the building, and at its dedication, October 23, 1848, it was all paid for. When the Baltimore Library Company became unable to sustain itself, in the year 1855, its collection of books and its interest in the Athenæum building were conveyed to the Historical Society, with the understanding that the rights and privileges of the society were to be extended to the members of the Baltimore Company. The collections in all departments had rapidly increased in number and value. After removing to this building, the fine arts department was added, and a large gallery built for the accommodation of pictures, and yearly exhibition of such meritorious works as might be obtained from artists and collectors. With the profits of these exhibitions a number of copies of masterpieces of the Italian school were purchased. In 1867 Mr. Peabody made the society a gift of \$20,000.

The library contains nearly 15,000 volumes of select books, 146 volumes of pamphlets arranged in classes and 700 not yet arranged, a great number of manuscripts, one of the most complete sets of United States documents in existence, and by far the largest collection of Maryland newspapers anywhere to be found.

The library was originally a circulating, but has gradually become a reference library, and since the transfer of the Baltimore Library Company has been opened to the public from 10 a. m. to 2 p. m., the members only being allowed to draw books. Not more than 50 books a year are withdrawn.

There are about 200 members, and the annual subscription fee is \$5. The average yearly number who use the library is about 1,000. The collection includes a set of United States patents, a very small bibliographical collection, and a manuscript catalogue arranged alphabetically according to authors. It was exempted from taxation by the act of incorporation.

The library owns the building it occupies, employs one librarian, and the total cost of administration is \$1,500 per year.

GENERAL SOCIETY FOR AID OF MECHANICS, (ALLGEMEINER UNTERSTÜTZUNGS-VEREIN FÜR KRANKE ARBEITER.)

This society was formed in 1851, and the library received its first impetus about this time from a gift of a few hundred volumes by a society

of the same kind which had recently been disbanded. It now contains about 3,000 volumes of German literature and standard works. The society consists of 1,000 members, who each pay twenty cents per year toward the support of the library. The circulation is from 10,000 to 12,000 volumes a year.

MARYLAND STATE NORMAL SCHOOL LIBRARY.

This library was begun with the school itself in 1865, and, although there are at present but 1,700 volumes, every book has been so judiciously selected that teachers and pupils find on its shelves almost every book of reference they need. The library is especially rich in works on English literature and science.

MARYLAND ACADEMY OF SCIENCES.

Formed in 1863, the academy was incorporated in 1867, Philip T. Tyson being chosen first president.

The library, based on a collection left by Evan T. Ellicott, numbers over 600 volumes. It is kept in the hall of the Academy of Sciences and used by the members for reference. There is no regular appropriation for increase. The present librarian is Mr. A. M. Smith.

LIBRARY COMPANY OF THE BALTIMORE BAR.

This library was formed in 1840 and incorporated in 1841. Judge George W. Brown, of the city court, was its originator. The library is supported by the subscriptions of its members. It is intended for the exclusive use of members of the Baltimore bar, and books cannot be taken from the library room except for use in court, and then only by members or a judge of some court sitting in Baltimore.

When the constitution was first adopted, it was signed by 66 of the most prominent members of the Baltimore bar, and at present there are 280 members.

The library numbers 7,000 volumes, exclusive of pamphlets; the yearly increase is about 100 volumes. The leading law periodicals of this country and Europe may be found in the reading room. Originally there was an admission fee of \$20, and a yearly subscription fee of \$10. At present the only charge is a subscription fee of \$15.

There is a printed catalogue of the library published in 1860, arranged alphabetically according to authors.

The chief librarian is Mr. Daniel T. Chandler.

LIBRARY OF THE INDEPENDENT ORDER OF ODD FELLOWS.

The project of establishing a library in connection with the order was first suggested by James L. Ridgely in 1836. In February, 1840, a committee was appointed to visit each lodge and ascertain what it would give in money or books. In December of that year enough ma-

terial having been collected to establish the library on a permanent basis, a standing committee was organized by the election of permanent officers and the adoption of by-laws and rules. Two librarians for each week, who gave their time without compensation, were elected from the committee. Gifts of books and money were made by lodges and members and by many prominent citizens who had no connection with the order. The library also derived assistance from public lectures, concerts, etc., and in March, 1846, it was decided to secure a permanent revenue by taxing each member 25 cents a year. The books are very systematically arranged and thoroughly classified. The number of volumes in English is 10,835, and in German 9,000. The number taken out during the year is 15,753—a weekly average of 302 volumes.

#### BALTIMORE NORMAL SCHOOL (COLORED.)

The library of this school was founded when the school was built in 1864, and was the result of contributions by citizens of Baltimore and other places. It consists of 1,000 volumes, comprising standard works, books of reference, juvenile literature, and English prose fiction.

The pupils of the school have free use of the library, and are allowed to take out one book at a time, and to keep it one week. The additions to the library are through private contributions.

#### LIBRARY AT THE FRIENDS' ELEMENTARY AND HIGH SCHOOL.

This library belongs to the Friends' Literary Association, which meets every week in the lecture room of the school. Though the association is an old one and had a number of books previous to the formation of the library, the latter was not founded until 1843. The object of the society is to furnish suitable reading for the members of the congregation, but of late years its privileges have been extended to the pupils of the elementary and high school.

There are 2,800 volumes, to which the pupils have access on the payment of a small sum. A catalogue of the library was printed in 1849.

Mr. E. M. Lamb, principal of the school, is the librarian.

#### CITY LIBRARY.

By an ordinance passed 1874, it was enacted that hereafter a city librarian should be appointed. The librarian is to take under his charge and keeping all the books and documents of every description, and the archives, records, papers, and proceedings of the corporation, except those relating to titles of city property; also all ordinances, resolutions, and proceedings of the city council, etc.; also, all books, papers, and memorials relating to Baltimore from its origin to the present time. These books are for the use of the city officers, and cannot be taken out except by them.

The library now numbers about five thousand volumes, among which are many very old and valuable books.

## OTHER COLLECTIONS.

The following list embraces the other public or semi-public libraries of Baltimore and vicinity which contain each 1,000 volumes or more. Further statistics of these and of minor collections of similar character may be found in the general table at the end of the volume.—EDITORS.

II.—PUBLIC LIBRARIES OF BOSTON AND VICINITY.<sup>1</sup>

BY F. B. PERKINS,  
*Of the Boston Public Library.*

This series of memoranda embodies such facts as circumstances permitted the compiler to gather. Where the different accounts were drawn up by the persons applied to for them, they are placed under the names of such persons. In other cases, such documents or data as were furnished or indicated, or such as could be found, have been used to the best advantage practicable. A few dates in chronological order, as follows, may be convenient.

## FOUNDATION DATES OF PUBLIC LIBRARIES IN BOSTON.

<sup>1</sup>Sketches of Harvard College Library will be found on pp. 21-26 and 78-89.—  
EDITORS.

The above order is followed in the arrangement of the accounts of these libraries, and those for which dates of origin were not at hand are placed subsequently.

#### MASSACHUSETTS HISTORICAL SOCIETY.

The society was founded in 1791 by a few gentlemen interested in American history, and was incorporated in 1794. The beginning of the library goes back to the foundation of the society. One of its objects, as set forth in the first line of the constitution, was "the preservation of books, pamphlets, manuscripts, and records containing historical facts." Active membership was limited to residents of the State and to the number of thirty, though, at the time of its incorporation, this number was increased to sixty. It has since been extended to one hundred. Among the causes that led to its establishment were the dangers that continually threatened the few libraries of the last century. In the introductory address to the public, reference is made to the court-house that was burned in Boston in 1747, when some of the public records were destroyed, and to the college library of Cambridge that shared the same fate in 1764, when large numbers of valuable books and manuscripts were also destroyed. The address cited the instance of Governor Hutchinson's house, plundered by an enraged mob in 1765, when many of his books and papers were scattered and lost. Great stress was laid on the risks that were continually run from fire and other causes.

The present extent of the library is about 23,000 volumes and 45,000 pamphlets. The Dowse collection, which was given to the society by the late Thomas Dowse in 1856, is included among the books. This collection comprises nearly 5,000 volumes, beautifully bound and in the best possible preservation. It contains many of the choicest works of English literature. A catalogue of it was printed in 1856; and, a few years later, one of the general library was published, in two volumes. The books generally are of a historical character. A specialty is made of local histories and works relating to the civil war. The circulation of books, which is restricted to members, is small; but the use of the library as one of reference is large. Frequently persons come a long distance to consult works which are on the shelves, and not easily found elsewhere. The management of the society lies with a council, consisting of the officers, *ex officio*, and a standing committee of five members, of whom two go out of office each year. A librarian and assistant, besides a janitor, are employed.

#### THE BOSTON LIBRARY.

This library, a proprietary one, sometimes confounded with the Boston Public Library, was first established by an association of gentlemen, who were, in 1794, incorporated by act of the legislature. It is now

owned by ninety-three shareholders, besides whom a few persons use it, paying \$5 a year. It is managed by a board of trustees, a secretary and treasurer, together with a librarian and one assistant. It contains 25,000 volumes; its annual increase is small, being only about 500 volumes a year; its contents are mainly for popular reading, and its circulation during the year 1874 was 6,118 volumes. Its catalogue is in manuscript only, but is sufficient for the present needs of the library.

#### SOCIAL LAW LIBRARY.

BY FRANCIS WALES VAUGHN,

*Librarian.*

This is a library of law books for professional use. The first meeting held by the proprietors in order to organize as a corporation took place April 23, 1804, the call for the meeting being signed by Theophilus Parsons, Daniel Davis, John Phillips, Wm. Sullivan, Charles Jackson, and Warren Dutton. An act of incorporation was obtained from the State in 1814. The books were at first kept in the office of one or another member of the bar, who acted as librarian. Subsequently they were placed in a closet of the grand jury room in the court-house; then the library grew to occupy the whole of this room; and when the present court house was built a room was set apart for it, in which it has since remained. Its growth is in some measure indicated by the number of volumes at different periods, viz: 1,473 in 1824; 4,077 in 1849; 8,269 in 1865; and about 13,000 in 1875. Many valuable books have been given to the library, especially by Hon. Charles Jackson, Hon. Theron Metcalf, and Hon. Richard Fletcher. Its corporate name is The Proprietors of the Social Law Library, and it is managed by a board consisting of a president, seven trustees, a treasurer, and a clerk. This board appoints a librarian and controls the affairs of the library. The proprietors at large are such persons as were originally incorporated, and others who may be admitted by the president and trustees as such, paying for a share not less than \$50. Annual subscribers may also be admitted by the board. The proprietors pay \$5 a year assessment; other persons admitted to use the library pay \$8. All moneys received by way of tax or excise from persons admitted to practice as attorneys in the Boston court of common pleas are to be paid over to the library treasurer for its use. The State furnishes the library with its public documents. The governor, lieutenant governor, members of council, and members of the legislature during session, various United States, State, and county judges, and other legal officers, may use the library gratis, and so may lawyers whose practice is usually in the other counties of the State.

## THE BOSTON ATHENÆUM.

BY CHARLES A. CUTTER,

*Librarian.*

Mr. Quincy, the historian of the Boston Athenæum, (from whose work almost the whole of this short memorandum is derived,) dates its first suggestion on October 23, 1805, when the members of the Anthology Society voted "that a library of periodical publications be instituted for the use of the society." In the following May it was decided to make this library, which had meanwhile increased encouragingly, the basis of a public reading room; and such a reading room was accordingly opened. Not long afterward arrangements were made to permit the incorporation of the institution. On January 1, 1807, the trustees (Theophilus Parsons, John Davis, John Powell, William Emerson, J. T. Kirkland, P. Thacher, A. M. Walter, W. S. Shaw, R. H. Gardiner, J. S. Buckminster, O. Rich) issued an announcement that the rooms were opened for use, in Joy's buildings, Congress street. The name used in this paper was Anthology Reading Room and Library. In February of the same year the trustees were incorporated as the Proprietors of the Boston Athenæum, and as such they organized April 7, 1807.

It is characteristic of what has always been and is still the purpose of the Athenæum, that in a "Memoir" of the Athenæum which was circulated in order to obtain subscription at this time, the reading room was described as being "the *first* department" of the Athenæum, and the library as "the *next* branch." As was the case with many of our libraries dating from the first half of the century, several collateral departments were added to the design; in this instance a museum or cabinet of natural objects, curiosities, antiques, coins, etc.; a "repository of art," both industrial and æsthetic; and a laboratory and observatory.

The premises first occupied by the Athenæum were in Scollay's buildings, between Tremont and Court streets. In 1809 the trustees bought a house in Tremont street, to which the collections were removed and the rooms opened for use in July of that year. In 1809, a catalogue, prepared by Rev. Joseph McKean, was printed, but not published, interleaved copies being used in the library for nearly twenty years.

When John Quincy Adams went as minister to Russia he deposited his own library in the Athenæum for the use of the proprietors, thus nearly doubling the size of the collection for the time, as his books were about 5,450 in number, and those of the library about 5,750. In 1814 the library itself had increased to 8,209 volumes. In April, 1817, the American Academy of Arts and Sciences deposited its books with the Athenæum, under the terms of an agreement between the two corporations providing for the proper separate accommodation and joint use of the collections. In 1820 the number of books had increased to 12,647, and the whole number available for the use of the proprietors and subscribers was nearly 20,000. In 1822 Mr. James Perkins, who

had been one of the trustees and vice-president of the Athenæum, gave it his own dwelling house and land in Pearl street, worth then not less than \$20,000; and in June of that year the collections of the institution were removed to its own newly acquired building. This gift is properly described by Mr. Quincy as "timely, munificent, and decisive in stamping it [the Athenæum] with the character of a permanent public institution."

In the summer of 1823 two other collections of books were deposited in the Athenæum on terms somewhat similar to those in the case of the Academy of Arts and Sciences, namely, the Library of King's Chapel and the theological library belonging to the Boston Association of Ministers. In January, 1824, the Athenæum Library consisted of 14,820 books.

In 1826 Mr. Thomas H. Perkins and Mr. James Perkins, the brother and son of Mr. James Perkins already mentioned, each offered the Athenæum \$8,000 conditioned on the gift of an equal amount by other citizens. This was raised, and the money was used in building a lecture room, and in enlarging the collections of the library. During this year the books of the Boston Medical Library, more than 2,000 in number, were added to the Athenæum Library; and the Boston Scientific Association, uniting with the Athenæum, handed over to it a fund of over \$3,000, which, with other sums raised for the purpose, afforded the means of placing its scientific department on a very creditable footing. In November of that year a curious agreement was made between the Athenæum and the Rev. J. B. Felt, administrator of the estate of Mr. W. S. Shaw, long the librarian of the Athenæum. Mr. Shaw had for many years been in the habit of buying books, coins, and other property in such a way that it was impossible to tell whether it was done with his own money or with that of the Athenæum. Though a shrewd, zealous, and successful collector, and thoroughly devoted to the Athenæum, he was far from being a careful accountant, and so thoroughly mixed up were the two properties at his death that Mr. Felt, as administrator, and the Athenæum executed a formal release to each other; Mr. Felt thus generously surrendering not only a large number of valuable books, pamphlets, coins, and other articles whose precise ownership might have been doubtful, but a considerable number to which he might easily have proved a claim.

At the beginning of 1828 the number of volumes in the library was 21,945; and besides the use of the books on its own premises, their circulation among the proprietors, first permitted in the year 1827, amounted during 1829 to 4,000 volumes.

From this time forward the history of the Athenæum has been little more than a quiet and steady progress in extent and usefulness. In 1839 it began to be evident that the Pearl street neighborhood was becoming too exclusively a business one to be proper for the best success of the Athenæum, and after various difficulties and negotiations a site

in Beacon street was obtained, the present edifice erected, (costing about \$200,000,) the library and other collections removed to it and opened for use in the year 1849.

The extent of the library is now about 105,000 volumes, and its executive staff numbers about twelve persons. Its increase during 1875 was 3,729 volumes, and the extent of its use is estimated at 33,000 volumes a year. Its use is confined to those owning shares or admitted under various agreements, or by votes of the trustees, so that it is strictly a proprietary library. It is, however, conducted in a liberal manner, and with courtesy to all applicants. The real estate, library, and fine art collections of the Athenæum are now estimated to be worth about \$400,000, and its other property, the income of which is used for the current expenses, at about \$250,000.

#### MERCANTILE LIBRARY ASSOCIATION.

BY L. ANNIE BALDWIN,  
*Acting Librarian.*

This library, the first of its class in the United States, was established in pursuance of a vote taken by a large assembly of merchants' clerks, at the Commercial Coffee-House, March 11, 1820. The idea of calling this meeting was first suggested to the leaders in the enterprise by the acknowledged father of mercantile libraries, William Wood, of Canandaigua, N. Y.

At the end of its first year the library contained 1,100 books, and the association numbered 220 members, besides many eminent and influential citizens as honorary members. During the next three years, the novelty of the enterprise having worn off, it barely maintained itself. In 1824 new books could only be bought by selling the library copy of Rees's Cyclopædia to raise the money, and the association was only kept in existence by the constant personal exertions of the officers, who even did the janitor's work. In 1826 a special effort secured the means of paying current expenses; but in 1829 the number of members fell to 81, and a dissolution was feared.

Up to 1831 the library was in Merchants' Hall, corner of Congress and Water streets. In that year it was removed to 93 Washington street, third floor. In 1832 came another low-water period; in 1833 cheaper rooms were taken at 53 Washington street, where, in that year, the number of members fell to 60. In 1834 only \$20 were laid out for books, and an actual deficit was feared. During 1835, however, there was a healthy reaction; the beginning of a permanent fund was gathered, the number of members was increased to 290, the current expenses paid (with a surplus) from the assessment alone, an elocution class opened, and 320 volumes added to the library.

In June, 1836, the collection of curiosities belonging to the association was burned, together with a number of paintings, and the same fire damaged many of their books. A little afterward the association re-

moved to Harding's Building, in School street, where it remained for five years. During this time literary exercises were made part of the regular work of the association, including debate, composition, and declamation. In 1838 was delivered the first course of lectures in behalf of the association, by Mr. J. Silk Buckingham. This course of lectures added many new members to the association. In 1843 courses of public lectures became part of the regular work of the association, and for a long time were a steady source of prosperity and income. Mr. Elliot O. Cowdin, according to Mr. Charles H. Frothingham,<sup>1</sup> was the originator of this plan.

In 1844 Messrs. William Sturgis, Abbott Lawrence, and eight other gentlemen of similar standing, gave \$1,000 to the library for standard books, and Daniel Webster shortly afterward gave \$500 more. In 1845 the association was incorporated, with power to hold not more than \$50,000 worth of property, and soon afterward \$8,000 were promised by eight eminent merchants toward a building fund. In 1848 there was another removal, to the corner of Bromfield and Province streets, and another in 1850, to Summer street. The reserved fund of the association was increased during this year by several gifts, one of \$2,000 being a bequest from Mr. John E. Thayer. From this time the history of the association has been marked by some vicissitudes, but has been, on the whole, encouraging. The establishment of the Public Library is not believed to have seriously injured the prospects or usefulness of the Mercantile Library, whose purposes and advantages are such as not to be interfered with by those of the larger, though younger, institution. The library is now lodged at 1179 Washington street. It contains about 21,500 volumes, and is accessible to all at \$2 a year. Life memberships may be secured by one payment of \$50. The institution is managed, like others of its class, by a board of directors. Its executive staff consists of an acting librarian, a lady, and one assistant for evening service.

#### STATE LIBRARY OF MASSACHUSETTS.

BY S. C. JACKSON,

*Librarian.*

On February 16, 1811, a resolve was passed by the legislature of Massachusetts to provide for exchanging sets of the statutes of the State for those of all the other States. This arrangement was at once successful, and an official history of the library, published in 1858, says: "It led to that system of exchange which now exists between each individual State and every other State in the Union. It led to the formation of a legislative library in this State, and, sooner or later, in all the other States."

---

<sup>1</sup> Mr. Frothingham delivered an historical address at the semi-centennial celebration of the association, March 11, 1870, from which nearly all the facts in the present outline sketch are taken.

The suggestion of a State library proper, in natural consequence of the rapid accumulation of the books received by this exchange system, followed in 1826, when an act was passed "for establishing a library of the general court, and providing for its safe keeping and management." This act provided that the books and maps which were to form the library were to be placed in the land office and in charge of the land agent. A legislative joint standing committee was to be appointed every year to have charge, buy books, and make negotiations; and \$300 a year for ten years were voted "to procure such books, maps and charts, works of science and the arts, as may tend to illustrate the resources and means of internal improvement of the commonwealth or of the United States." This act was repeated in 1836, the appropriation being made annual without limit, but not increased. June 7, 1826, the library was reported ready for the use of the general court. In 1827 an effort was made to complete the sets of State laws, and was successful in most instances. In 1844, on a suggestion from the legislative librarian of South Carolina, the exchange system was applied to reports of judicial decisions; but preceding reports have had to be bought. In 1853 exchanges of public documents of all kinds were permitted at the discretion of the trustees of the library. In 1845 M. Vattenare's system of international exchange was adopted by law and was continued for eleven years. One thousand two hundred and fifty-two volumes, many of them valuable, were obtained by it; but the attendant cost, amounting to more than \$5,000, besides considerable sums for binding, has made the books pretty expensive, and in 1855 the system was discontinued by resolve.

The original method of managing the library by yearly committees was dropped in 1850, and three trustees, to be appointed for three years by the governor and council, were substituted. In 1849 the library, then containing 7,346 volumes, was transferred to the office and charge of the secretary of the board of education. John W. Coffin, land agent, who had acted as librarian for twenty-three years, was succeeded by Dr. Barnas Sears, secretary, who remained in charge for six years, when he was succeeded by Joseph White, the present official librarian.

After various changes, fire-proof premises were provided for the library in 1855-'56, in an addition to the State house, built and fitted up for the purpose. The trifling annual grant of \$300 was continued for thirty years, down to 1856, although \$2,050 were at different times added for special purposes. In May, 1857, the annual grant was made \$2,000.

The library contains about 37,000 volumes, and increases by about 1,200 volumes a year, mostly by exchange. It consists almost entirely of United States, State, and territorial statutes, legislative documents, law reports, and political economy, social science, education, and scientific works. Great care is required and exercised to maintain complete the different sets of public documents.

Among the works in the library, other than its chief material as

above, are sets of the general statutes and local and personal acts of the Parliament of Great Britain, and the French Archives parlementaires. There is a set of the large edition of Audubon's Ornithology and a number of costly and valuable illustrated books of various kinds among those procured through M. Vattemare.

The library staff consists of one librarian and three assistants. The library is extensively used for consultation, but of the number of volumes consulted annually no record is kept. Only books removed from the premises are noted in the "charge book." The following rules and regulations show distinctly who use the library, and for what and how :

#### RULES AND REGULATIONS.

The library is open during the session of the legislature each day, without intermission, from 9 a. m. to 5 p. m., excepting Saturday p. m., when it is closed at 1 o'clock for sweeping, dusting, etc.

All persons may use the library for consultation or reference.

Members of the legislature may enter any alcove, and consult or peruse any book at their pleasure.

Members may take any of the miscellaneous books to their lodgings, and retain them for a reasonable time.

The statutes, law reports, state papers, journals, dictionaries, encyclopædias, etc., may be taken to any part of the State house, but are not to be removed from it, except in special cases.

Any member wishing to have access to any or all parts of the library, can be furnished with a key which will open every alcove, on application to one of the assistants, the key to be returned before leaving the library room.

Members taking books from the shelves are requested to be particularly careful to return them to their proper places, or to leave them on the tables, to be replaced by the attendants.

No book is to be taken by a member from the library room without its being charged to him.

Books used at a hearing before a committee are to be charged to some member of the committee, or of the legislature, and not to the counsel or parties in the case pending.

Any member having special occasion to use the library in the evening, or at any hour after it is closed, can have access to it through one of the watchmen in charge of the building.

#### BOSTON SOCIETY OF NATURAL HISTORY.

This collection contains about 10,000 books and 3,500 pamphlets, and its increase during 1874 numbered 1,397 volumes. It consists wholly of works on natural history, and was established in 1831 by the early members of the society. It is managed, under the direction of the council of the society, by a librarian and two assistants. The extent of its circulation during the last year was 835 books, taken by 109 persons, and its use is confined to members of the society and to others who may receive permission.

## NEW ENGLAND HISTORIC-GENEALOGICAL SOCIETY.

BY JOHN WARD DEAN,  
*Librarian.*

The library of the society is mainly one of New England history, biography, and genealogy, and dates back nearly to the origin of the society in the autumn of 1844. During the first three years of the existence of the society circulars were annually sent to its members, stating what material was especially desired for this library, and urging its collection. The responses were remarkably general and liberal, and the result was the establishment of the present library, which is now accommodated in the society's fire-proof building, 18 Somerset street, Boston. At the beginning of the year 1875 the library contained 12,337 bound volumes and 40,414 pamphlets, and is believed to comprise the best collection of local and family histories possessed by any institution of its class in the United States. It is constantly resorted to for study and consultation in its specialties, and steadily increases, mostly through the same liberality which has been its principal resource hitherto. Several small funds, given by friends of the society, are invested and their proceeds used for library purposes. Such are the Bond fund, arising from the sale of an edition of Bond's *History and Genealogies of Watertown*, bequeathed by the author, Dr. Henry Bond, of Philadelphia, in 1859; the Barstow fund of \$1,000, given by John Barstow, esq., of Providence, in the year 1860-'63; the Cushman genealogical fund, arising from the proceeds of an edition of the *Cushman Genealogy*, bequeathed to the society in 1863 by Hon. H. W. Cushman, of Bernardston. The actual cash proceeds of these funds, as reported in the treasurer's account, January 1, 1875, (not including the Cushman fund, from which no proceeds are reported,) were \$1,585.01.

This collection is, of course, absolutely indispensable in the work of this industrious and energetic society, which has with very small means accomplished much. The twenty-nine volumes of its quarterly, the *New England Historical and Genealogical Register*, are a well known and extensive encyclopædia of New England genealogy and biography, and are alone a remarkable monument of persevering and successful learning and labor. Besides this, however, and the gathering of its library, the society has been influential in aiding or causing the publication of a number of works in its chosen department.

In addition to its books and pamphlets, it contains a considerable collection of relics and curiosities illustrative of New England history, and some valuable manuscripts, prominent among which is the Knox collection, consisting of about 14,000 manuscripts, and including the military and other papers and the correspondence of our revolutionary leader, Major-General Knox. This collection was given by the general's descendant, Rear-Admiral Henry Knox Thatcher, himself a member of the society.

The use of this library, though it is the property of the society, is liberally allowed to all proper persons who may request it.

PUBLIC LIBRARY

## ROXBURY ATHENÆUM.

BY SARAH E. PITTS,  
*Librarian.*

The Athenæum was founded in 1848 by a number of gentlemen residing in Roxbury. The library now contains 8,700 volumes, and about the same number of unbound pamphlets. Two hundred and thirty volumes and 170 pamphlets were added during the year 1874, and 8,200 volumes were borrowed from the library, which is used by shareholders (par value of shares, \$25) and by subscribers, who pay \$4 a year. Each person is entitled to three books at one time. The managing board consists of a president, vice-president, treasurer, and nine trustees. The librarian is the only person employed by them. The library cannot be considered in a very progressive condition at present, owing, in part, to the establishment of free libraries in this section of the city. A number of the proprietors have expressed a decided preference for the private library, liking the retirement and the freedom from the strict rules which are necessary in the management of a large public library; but whether that number will be large enough to carry on the library prosperously is at present undecided.

## BOSTON PUBLIC LIBRARY.

The city of Boston, on April 3, 1848, accepted an act passed by the State legislature on March 12 preceding authorizing the city to establish and maintain a public library. Some efforts were made, but in vain, to make the fine collections of the Athenæum the basis of the proposed public library. During 1849 several gentlemen presented books to the city for such a library; in 1850 Mayor John P. Bigelow gave \$1,000, and Edward Everett gave his valuable collection of United States public documents and other works, numbering more than 1,000 volumes. May 24, 1852, the first board of trustees was organized, Mr. Everett, president. Several other sums were given for books; and, on October 1 of the same year, Mr. Joshua Bates, of London, in consequence of having read the preliminary report drawn by Mr. George Ticknor and Mr. Everett, offered \$50,000 for the use of the library, which gift was accepted and funded. On October 12 the city legislation respecting the library was begun by the passage of the first ordinance. The actual opening of the library to use first took place in Mason street, not far from the site of the present building, March 20, 1854, and on May 2 succeeding the library itself was open to readers and borrowers at the same place.

The corner-stone of the present edifice was laid September 17, 1855; in 1857 the eminent bibliographical scholar, Prof. C. C. Jewett, was made superintendent; January 1, 1858, the library building was dedicated, having cost, with the land, about \$365,000. On September 17,

1858, the reading room in the present building was opened for use, and December 20 the Lower Hall. A catalogue of the books in the Lower Hall was published at the same time. The collection thus offered to the public was somewhat more solid in average character than the present Lower Hall library, which has become the distinctively popular or light reading branch of the institution.

The Upper Hall, with about 74,000 volumes, was opened for use in 1861, the first volume of its catalogue (or index) being ready at the time. The whole number of books in the library was now 97,386, and the series of splendid gifts to the favorite institution, so characteristic of the city of Boston, in money and books, had already become remarkably large. Mr. Bates, besides his noble present of \$50,000, afterward gave one of equal value in books, which formed part of the library in the Upper Hall when opened in 1861; and this hall, upon his death, in 1864, was named after him, Bates Hall.

The sons of Dr. Bowditch, the famous mathematician, had presented their father's library of 2,550 volumes, besides manuscripts. Rev. Theodore Parker's great and learned collection of 11,061 volumes had been received under his will. Mr. George Ticknor had given more than 3,000 volumes, including a large number of Greek, Latin, and Italian classics. Besides these there had been added to the Bates fund a sum of \$10,000 by the will of Hon. Abbott Lawrence, \$4,000 by that of Miss Mary P. Townsend, and \$20,000 by that of Hon. Jonathan Phillips, in addition to \$10,000 already given by him.

Similar additions continued from time to time to be made to the resources of the library, the next of importance being the very curious and valuable ancient Prince Library, bequeathed by its collector, Rev. Thomas Prince, in 1758, to the deacons of the Old South Church. This collection had suffered many dilapidations in various ways, one of the worst being the unjustifiable procurement by three well known collectors of books, not very many years ago, of three copies of the Bay Psalm Book, worth then \$300 or \$400 each, and which would now be worth probably \$1,000 apiece, in exchange for a few volumes and a little binding, to the total value of, perhaps, \$40 or \$50. The whereabouts of these copies is still known, and it is to be hoped that they may some time be recovered.

To bring down to date the account of the remarkable collection thus fused with the library, must be added a reference to the Ticknor and Barton collections. The first of these, of Spanish and Portuguese books, bequeathed by Mr. Ticknor and received after his death in 1871, contains nearly 4,000 volumes. With this Mr. Ticknor gave a fund of \$4,000, to be used for increasing it. The second is the very remarkable library gathered by Thomas Pennant Barton, of New York, which includes the best Shakspearean collection in America, besides much excellent standard English literature, and a fine department of early French literature.

PUBLIC LIBRARY—BATES HALL.

In the year 1866 the old "ledger system" of recording loans of books was given up, and the "slip system" substituted. In October the first of the library series of Bulletins, now issued quarterly, showing the most important accessions of the quarter, was published.

The death of Mr. Jewett took place in the beginning of 1868, and he was succeeded by Mr. Winsor, the present superintendent. In November, 1870, the first of the existing branches, or popular local suburban outposts of the library, was established at East Boston. These branches are now six in number—at East Boston, South Boston, (dating from 1872,) Roxbury, (1873,) Charlestown, (1874,) Brighton, (1874,) and Dorchester, (1875.) Into the Roxbury, Charlestown, Brighton, and Dorchester branches have been gathered, or associated in some way, local libraries already existing or provided for. Such were at Roxbury the Fellowes Athenæum; at Charlestown, the Public Library, already established there; at Brighton, the Holton Library; and at Dorchester, a local circulating library established at the Lower Mills village. As part of the arrangement for uniting this last collection with the Public Library, a further ramification of the branch system has been tried, by the establishment at the Lower Mills, not of a library but of a "branch delivery," in charge of an agent who receives and attends to applications for books, to be supplied either at the Dorchester branch, or at the Central Library in Boston.

The action of the Boston city council in respect to the library has been constantly handsome. Its policy has been such as to permit the library to be managed on library principles; and besides the liberal regular appropriations annually made for its support, the special requirements, always incident from time to time to the growth of such an institution, have been promptly met. Such were, for instance, the appropriation of \$70,000 in 1872, to purchase the adjoining Richardson estate, in order to provide for a future extension of the building, and that of about \$30,000 in 1873, to erect an addition to the edifice.

The whole number of books in the library is over 297,000. It was, on July 1, 1875, exactly 280,709, distributed as follows:

|                                |         |         |
|--------------------------------|---------|---------|
| In Bates Hall .....            | 176,555 |         |
| Lower Hall .....               | 34,253  |         |
| Newspaper room .....           | 2,674   |         |
| Duplicate room .....           | 9,988   |         |
| Total Central .....            |         | 223,470 |
| East Boston .....              | 8,617   |         |
| South Boston .....             | 6,778   |         |
| Roxbury .....                  | 9,112   |         |
| Charlestown .....              | 16,854  |         |
| Brighton .....                 | 11,575  |         |
| Dorchester .....               | 4,258   |         |
| Jamaica Plain (intended) ..... | 45      |         |
| Total branches .....           |         | 57,239  |
| Grand total .....              |         | 280,709 |

The following figures show the actual extent to which books are delivered, not including Bates Hall "within the rail," the patent room, the reference department of Bates Hall, or the periodical room. With these exceptions, the number of books issued has been as follows:

|   |           |
|---|-----------|
| During June, 1875 .....                 | 56,368    |
| During the library year, 1874-'75 ..... | 758,493   |
| During the library year, 1873-'74 ..... | 625,442   |
| From establishment to July 1, 1875..... | 6,150,226 |

These figures show an increase of 133,051 a year in circulation, and a total daily book delivery during the last library year of more than 2,500 on each open day.

The organization of the library is briefly as follows:

The organic law of the institution is the city ordinance establishing it. Three members of the common council of Boston are always members of the board of trustees; and the trustees oversee and control the library business, subject to the ordinance. The executive force includes—

1. The superintendent, whose special staff consists of a secretary, a dispatch clerk, an auditor, (who keeps the accounts,) and a messenger.

2. Seven departments in the Central Library, to wit: Bates Hall, circulating department, under a keeper with six assistants; Lower Hall, circulating department, keeper and twenty-two assistants; catalogue department, assistant superintendent and fourteen assistants; ordering and receiving department, clerk and three assistants; shelf department, custodian and two assistants; janitor's department, chief janitor and two assistants; bindery, foreman and eight assistants.

3. Six branches already named, where are employed six librarians and forty-one others in all.

The whole library working force thus includes 116 persons, of whom more than two-thirds are women. They are subordinate, and report respectively—the assistants to their heads of departments, these to the superintendent, he to the board, and the board to the common council. A code of by-laws and regulations supplements the ordinance, and defines the duties and responsibilities of all.

The principal items of the library expenditures are as follows for the year 1874-'75, but to these should be added the sum of about \$30,000, already mentioned, appropriated by the city for an addition to the building; which is accounted for in the (city) public buildings department, but does not appear in the library accounts:

|   |             |
|---|-------------|
| Salaries.....   | \$61,127 48 |
| Books and periodicals.....  | 28,080 55   |
| Binding.....  | 8,080 84    |
| Printing catalogues, (Central Library only).....                          | 3,361 57    |
| Printing catalogues, (with some other Dorchester expenses, new branch)... | 2,664 96    |
| Other printing and stationery.....  | 4,687 57    |

READING ROOM FOR PERIODICALS.

|   |             |
|---|-------------|
| Furniture, (mostly in new addition to building).....                  | \$10,256 55 |
| Fuel, (\$3,440.88,) gas, (\$4,528.55).....                            | 7,969 43    |
| Transportation, (daily to and from branches, etc.,) postage, etc..... | 2,288 18    |
| Expense .....   | 4,159 59    |
| Total .....   | 132,676 72  |

To understand properly the apportionment of these heads of expenditure as a matter of library administration, something like the following is necessary: Call the whole, in round numbers, \$133,000; deduct the extraordinary item for new furniture, say \$10,000, and there remain \$123,000. Let the whole be considered under the three heads of 1. Books, (and binding;); 2. Salaries; 3. Other expenses; and we have this division of our total, viz:

|                        |          |
|------------------------|----------|
| Salaries .....         | \$61,000 |
| Books and binding..... | 36,000   |
| Other expenses .....   | 26,000   |
| Total .....            | 123,000  |

In this apportionment the salary account is unusually large, and the book account, of course, proportionately small. This (at first sight undesirable) condition of things is, in great measure, due to two causes, viz:

1. The extent and activity of the circulating or popular departments of the library, requiring a large staff.

2. The very great fulness and thoroughness with which the cataloguing is done. Investigation would show that all the individual items which make up this large total yearly cost are scrutinized and economized with complete system and thorough care.

The current business of the library, so far as relates to its books, may be summarily considered under six heads, as follows:

1. *Choosing what books to get.*—In the beginning, much of this selection was done by experts in the different departments of learning. At present, it is found best to permit the procured accessions to be determined in two ways: (1) by the judgment of the regular buying agents of the library upon such new books as appear, and (2) by the calls of the public for such books as are not already found in the library. The choice of the agents is made under a few clear conditions, and subject to the return of any or all books furnished, if unacceptable. The demands of customers are made upon regular blanks furnished by the library. Books so asked for are furnished, of course, whenever to be had, and as soon as possible; and notice of their being ready sent to the suggester, except in the few cases where great cost or other sufficient reasons may prevent.

2. *Buying the books.*—This is done by a complete business system of ordering, so arranged that preliminary search shows that the library has not the book; a short title slip catalogue shows what books have been sent for, and when; press copies of all orders are kept; books received are checked off on the invoices, and the invoices kept filed

in order of arrival; in short, the arrangements are such as those of any accurate book purchasing business.

3. *Getting the books ready to deliver.*—The books are first dealt with as merchandise, being collated, returned, if not perfect, stamped, marked, and labeled, so as to identify them as the property of the library and unfit them as much as may be for seeming to be the property of any one else. They are then catalogued; then “located,” *i. e.*, put in their proper alcove, range, and shelf, and the mark of such location entered both on the book itself (inside and outside both) and in the shelf list, (with the title.)

4. *Identifying the customer.*—The guarantee system is not used in this library, a mere identification being thus far found sufficient. Any person whatever, being decent, may use the books in the library. To take them away, a brief process of registration and, sometimes, inquiry is gone through with, resulting almost without exception in issuing a card bearing the applicant's name. This is shown whenever a book is taken or returned, and stamped along with the slip for each book. And a “registration slip” is filled out and put into the alphabetized file as each card is given out, headed, of course, with the same name as that on the card. These registration slips form thus an alphabetical catalogue or directory of the customers of the library. At present the whole number of names in this directory is more than ninety thousand, of which about two-thirds are still “alive,” *i. e.*, are of persons now using the library.

5. *Delivering the books.*—This is done on a system which enables the library to accomplish the maximum of work by causing each customer to do a very little for himself. Instead, that is, of the ancient fashion, by which the librarian recorded the name of the book and the name of the taker, it is the latter who makes the entries, always on the regular and uniform library “charging slip,” so that the library has left only the stamping of the slip and the marking a brief date in the book. The slip then represents the book and its taker until it comes back, and also as long as it is preserved.

6. *Getting the books back.*—The good customer brings the books back himself in good order, according to rule. For the bad customer, there is a set of penalties and pursuits. After so many days a fine accrues; after so many days more a larger penalty accrues, and, besides, a messenger seeks out the delinquent. The contumacious are debarred the use of the library until arrears are settled. Injury to books is punishable by fine or imprisonment under a special statute.

The machine thus organized and conducted works well. Perhaps one single final statistic, to be appended to the total figures of circulation above noted, will sufficiently attest this success; it is the fact that, in so large a city as Boston, only one book is being lost out of about every 9,000 delivered out, (the precise figures for the year 1874-75 are one out of every 8,921,) or one-ninetieth of 1 per cent. Any mercantile business of equal extent, showing as small a margin of bad debts as this, would be thought pretty carefully managed.

## CONGREGATIONAL LIBRARY.

BY REV. I. P. LANGWORTHY,

*Librarian.*

The Congregational Library originated in a feeling among a few men who thought it very desirable to gather and preserve, so as to have available, the writings and various mementos of the first settlers of this country. Prof. Bela B. Edwards, of Andover, published an able article on this subject in the August number of the *Bibliotheca Sacra*, 1847. The first meeting in behalf of the object was at Andover, in the winter of 1851, and the association was organized May 25, 1853. It had a very small beginning; in its first ten years only about 3,600 volumes and 8,000 pamphlets had been gathered, and these were of quite a miscellaneous character. All funds collected were used, and are still, for the purpose of building and for running expenses—not a dollar ever having been appropriated with which to buy a book. Gifts of old books and pamphlets have been more frequent, and in some instances quite large, within the last twelve years, so that we now have nearly 23,000 volumes and about 95,000 pamphlets, including duplicates. The increase for the last year has been 4,957 volumes and 16,074 pamphlets. The prevailing character of the books is religious—doctrinal, ecclesiastical, expository, practical, historical, experimental, controversial; embracing everything that can be secured that has been published, of all shades of belief and non-belief. Statistics, biographies, local histories, and the like, are among our few specialties.

It is strictly a reference library, and no one is denied access to its books. One dollar secures any person of proper character whose name is entered upon the "visitors' book" all the privileges of the library for life.

It is managed by a board of directors, appointed by members of orthodox Congregational churches, who have paid a sum not less than \$1. The corporate name of the organization is The American Congregational Association.

The library is everywhere known as the Congregational Library. The working force at present is a librarian and one assistant. Its chief drawback is the want of a library fund for the purchase and binding of books. It has now a very commodious fire-proof room in connection with the Congregational House.

## ODD FELLOWS' LIBRARY.

This library was founded in 1854, in consequence of an offer by Tremont Lodge, one of the lodges meeting in the hall which then stood at the corner of Chauncy and Essex streets, to give for such a purpose a library of its own, on condition that the members at large of the order would add a certain number of other books. This was done, and the collection was put in order and opened for use to the members as the

property of the Odd Fellows who met in the hall. In 1858 a committee from the different lodges and encampments consulted upon the means of improving the library, and in consequence a managing board of trustees was appointed, one from each lodge and encampment. In December of the same year, after various means had been tried with moderate success to increase the number of books, the library was opened again for use with 446 volumes; N. P. Burgess, librarian. In 1863 it was removed to the new hall in Washington street, at which time its circulation was about 1,450 volumes a year. In October of that year the whole number of books was 1,081. According to their ability the different bodies owning the library have constantly responded to the necessary calls made upon them for supporting and enlarging it. At the end of 1872 the library was closed and inspected for weeding out used up books which were replaced with new ones, and in June, 1873, it was again opened in the present hall, corner of Tremont and Berkeley streets. It has now grown to contain 2,751 volumes, and in 1874 it circulated 7,624 volumes. It is open evenings, except Saturdays, Sundays, and legal holidays; it may be used free by all members of such lodges or encampments as meet in the hall, including Mary Washington Lodge of the Daughters of Rebekah. A brief but clear and sensibly made catalogue was issued in April, 1875.

THE GENERAL THEOLOGICAL LIBRARY.

BY REV. LUTHER FARNHAM.

In April, 1860, the General Theological Library was instituted in Boston under the revised statutes of Massachusetts. Among those who took an active part in forming the institution were Rev. Dr. Burroughs and Mr. Farnham, Bishop Eastburn, Dr. George W. Blagden, the late J. Sullivan Warren, esq., Rev. Dr. Samuel K. Lothrop, Rev. Ezra S. Gannett, D. D., John B. Kettell, esq., and others. By the rules of the institution, a person who has given \$1,000 or upward, ranks as a founder. On this principle the late Rev. Dr. Charles Burroughs is the first founder of the Theological Library, the late Ebenezer Dale, esq., of Boston, the second founder, and the late Miss Arabella Rice, of Portsmouth, N. H., the third founder. More than any other, Dr. Burroughs was the founder of the institution, for he was for several years the only surviving member of a similar library that existed in Boston from about 1808 to 1815, but which was not in active operation after the latter date. And if we include the bequests of Dr. Burroughs to the Theological Library, he has given to it more than three times as much as any other person, or about \$10,000. Another reason for the formation of the society was to promote Christian union, or, at least, a better understanding among religious denominations.

The library, when organized and opened to the public, was almost destitute of books and money. This was at No. 5 Tremont street, where it remained for about two years. It was next lodged at 41 Tremont street, in more spacious quarters, where it continued for nearly five

years. The growth of the library required it to seek more spacious accommodations at No. 12 West street, where it has been for nearly seven years. The library has gained by gift and purchase nearly 1,000 volumes, on the average, each year since it was opened; including the private library of the late Dr. Burroughs, bequeathed to the institution, but not yet received, as his widow has the use of it during her life. The estimated value of the library, now numbering more than 12,000 volumes, is about \$16,000. The permanent fund of the library is \$8,000, and there is a bequest of \$5,000, not yet received, to be added to it.

In the year 1874-'75, only 245 volumes were added to the collection, of which 173 were purchased and 74 given, the financial situation of the country being unfavorable to its growth. The character of the library is theological, religious, and moral; hence it is known as the General Theological Library, and was formed for the purpose of collecting the books used by clergymen, theological students, Sunday school teachers, and readers of religious literature. The library is unsectarian in character, being used by persons of all the religious denominations, which are fairly represented in its management. Another object of the society is to collect all pamphlets and periodicals on religion and theology. The reading room belonging to the library receives nearly 100 different periodicals, representing twenty religious denominations.

The library may be used by members and annual subscribers. The former pay \$50 once for all, or \$5 a year; the latter, if Sunday school teachers, pay \$2 a year; if clergymen or theological students, \$3 a year; if of neither of these classes, \$5 a year. These terms are for use of the library, including the drawing of books. Members take usually two books at a time; if they live within ten miles they keep them a month; if beyond, two months. The distance to which books may be taken is unlimited. The library extends hospitality to strangers who are neither members nor subscribers. It was incorporated in 1864, and is managed by a board of fifteen directors, who are elected for three years and may be re-elected.

Two persons are regularly employed in the library, the secretary, who also fills the office of librarian, and an assistant librarian, who is usually a woman.

Forty thousand volumes and periodicals have been consulted or drawn from the library during the last year. Persons residing in forty-six towns of Massachusetts, New Hampshire, and Vermont drew books during that time. In the past thirteen years, books have been drawn by persons living in two hundred and twenty towns and villages in six different States; and persons from twenty-two other States, from Canada, Great Britain, France, Africa, China, and Japan, have used the library at the rooms.

#### BOSTON AND ALBANY RAILWAY LIBRARY.

This library, unique, it is believed, at least in the United States, was established in the year 1869 by the Hon. Ginery Twichell, president of

the road, who gave several hundred dollars to start it. The board of directors of the road vote an annual amount for its support and management. Its object, the supply of appropriate reading, free of all charges, for those employed by the road, and the proposed scope of its collections are thus stated in the documents of the library: "To have within reach of officers and employes the best books on the railway system and the industrial arts, and also as many on the sciences and in general literature as shall be attainable." There are at present about 1,650 volumes, which are kept in quarters provided for the purpose in the passenger station of the road in Boston, in charge of a librarian. The circulation reaches about 400 a month. The library is open two hours once a week, at fixed times, and there is a regular system by which books can be sent for and returned by train, along the whole length of the road. Those of the force who live in Boston are not so dependent as the rest upon the library, as they have access to the Public Library and other collections; but by those not so advantageously situated, the railroad library is well used and well appreciated, as its steadily increasing circulation proves. The whole number of employes who might use the library is about 250, and about two hundred are always using it, who would, as they are situated, hardly be able to read anything at all without it. A considerable number of statistical and scientific reference books and some rather costly ones constitute a "consulting department," and must be used at the library, or taken away only under special restrictions. Examination of the catalogue shows an uncommonly solid, sensible, and useful collection of books, these strong characteristics being plainly visible even in what there is of poetry and romance. Very properly there is a distinct abundance of railway literature of various kinds. There can hardly be a doubt that the example set by this very interesting library might be followed with great advantage by all our larger railways.

#### DEAF MUTE LIBRARY.

The Boston Deaf-Mute Library Association was organized by Edwin N. Bowes and associates, July, 1872. A hall was rented at 160 Washington street, and the same furnished by the kindness of friends of the mutes and other liberal citizens of Boston. It was dedicated on the 1st of October, 1872. It was designed as a place where the mutes of Boston and vicinity might meet for social enjoyment and mental improvement. A course of lectures and simple amusements was begun and continued until the fire of November 9 and 10, 1872, when all the property of the library was destroyed, amounting in value to \$1,500. A new hall was then procured at 280 Washington street, and through the kindness of Messrs. Lee & Shepard, and other publishers and booksellers, a new library was formed, and the association soon recovered from its losses. But few new books were procured during the last year owing to lack of sufficient funds. The library numbers about 800

volumes; the prevailing character of the books being the same as at most libraries, consisting of religious works, novels, history, travels, etc.

Formerly the rules would not admit of any but mutes being members, but at the present time any person can have access to the library, with the privilege of drawing books, on the payment of \$1.

The act of incorporation provides that the name shall be The Boston Deaf-Mute Association, and that the board of officers shall consist of four hearing trustees and five directors, president, and vice-president. At present only the librarian receives a salary. The number of books taken out the past year was about 500 volumes.

#### POST LIBRARY, FORT WARREN, BOSTON HARBOR.

This library numbers 1,450 volumes, and was in great part accumulated during the war, for the use of the prisoners confined in the fort. Additions have been made from time to time for the use of the troops stationed at the post, and the library is freely used by all who reside on the island, soldiers and laborers alike.

#### BOSTON COLLEGE LIBRARY.

This library numbers about 10,000 books and manuscripts, of respectable value, selected for the purposes of the institution, (which is a Roman Catholic college, conducted by Jesuit clergymen,) and is accommodated in the various departments of the college as found convenient for use. It is intended soon to place the whole in one commodious room adapted to library purposes.

#### LIBRARY OF THE PERKINS INSTITUTION FOR THE BLIND.

This is a small collection, mostly of reference or text books, printed in raised letters, for the use of the blind. It was founded at the establishment of the institution by the late Dr. S. G. Howe. One of the teachers acts as librarian, and the use of the books is confined to the pupils and employés. A few books in raised letters have been procured by the Public Library, which books may be considered available, to some extent, as a branch of that library at the institution.

#### OTHER COLLECTIONS.

The following list embraces other public or semi-public libraries in Boston possessing each 1,000 volumes or more. Further statistics of these, as well as of minor collections of similar character, will be found in the general table at the end of the volume.—EDITORS.

|   | Volumes. |
|---|----------|
| American Academy of Arts and Sciences. (For a notice of this library see Chapter VII, p. 187, Scientific Libraries) ..... | 16,000   |
| American Board of Commissioners for Foreign Missions .....  | 6,000    |
| Boston University:  |          |
| School of Theology .....  | 4,000    |
| School of Law .....   | 1,600    |
| School of Medicine.....   | 1,500    |

|  | Volumes. |
|--|----------|
| Commonwealth Circulating Library.....                  | 1,800    |
| Consumptives' Home .....                               | 1,237    |
| Gannett Institute.....                                 | 4,200    |
| Girls' High School.....                                | 2,000    |
| Handel and Haydn Society.....                          | 11,669   |
| Latin Grammar School.....                              | 5,000    |
| Lindsley's Circulating Library.....                    | 3,000    |
| Liscom's Circulating Library.....                      | 1,000    |
| Loring's Select Library.....                           | 10,000   |
| Lunatic Hospital.....                                  | 1,200    |
| Massachusetts General Hospital, Treadwell Library..... | 3,542    |
| Massachusetts Horticultural Society.....               | 2,800    |
| Massachusetts Institute of Technology.....             | 2,500    |
| Massachusetts State Prison.....                        | 3,200    |
| Mechanic Apprentices' Library.....                     | 4,500    |
| Medical Library Association of Boston.....             | 2,500    |
| Merrill's Library.....                                 | 4,000    |
| Mrs. S. H. Hayes's Family and Day School .....         | 1,500    |
| Naval Library and Institute.....                       | 4,500    |
| New Church Library.....                                | 2,000    |
| Public Institutions on Deer Island.....                | 2,000    |
| Roxbury Society for Medical Improvement.....           | 1,500    |
| Seamen's Friend Society.....                           | 1,000    |
| Young Men's Christian Association.....                 | 4,785    |
| Young Men's Christian Union.....                       | 3,635    |
| Young Women's Christian Association.....               | 1,000    |

### III.—PUBLIC LIBRARIES OF BROOKLYN.

BY S. B. NOYES,

*Librarian of the Mercantile Library.*

#### THE MERCANTILE LIBRARY ASSOCIATION.

The Mercantile Library of Brooklyn owed its origin in 1857 to a popular movement on the part of the business and professional classes of the community, based on the conviction, to quote the words of one of the chief benefactors of the library, "that the great public requirement of the city, of the first importance in the order of time," was a great public library of circulation and reference, comprehensive in its scope and popular in its administration. The word "mercantile" has had no significance as implying any limitation in its organization and work. To build up a great collection of the best books in all the various departments of science and literature, past and present, has been the constant aim of its managers.

The initial steps in organization were taken in 1857, at a public meeting.

December 17, 1857, a constitution was adopted, and in March, 1859, the act of incorporation was secured.

The library was opened to the public in May, 1858, with 7,000 volumes on the shelves, increased during the same year to 11,400 volumes. Dur-

ing the first ten years the association occupied rooms in the Athenæum building, the library growing slowly but steadily.

In 1861 Mrs. Maria Cary, widow of William H. Cary, gave \$5,000 to the library, in the form of a trust, the principal to remain intact, the interest to be expended in the purchase of books in the departments of history, science, and industrial and ornamental art. Another lady, Miss Caroline Thurston, gave to the library, in 1865, the sum of \$100 to form the nucleus of a permanent general book fund.

For several years prior to 1864 the want of a building of its own had been keenly felt, and in April of that year the newly elected board of directors subscribed among themselves the sum of \$7,000 as the basis of a building fund, and an executive committee was appointed to devise a plan of action. The appeal to the public met with a generous response, and before the end of the year the sum subscribed reached \$105,000, and the site of the present building was secured. The charter of the institution was amended at this time in several particulars, one section providing for the government of the association by a board of fifteen directors, (instead of fourteen as heretofore,) one-third of them to be elected annually, to hold office for three years. Another section vested the control and management of the trust funds and property of the association in a board of nine trustees, members of the association, possessing the power of filling all vacancies in their own body; it being the duty of the said trustees to pay over the income derived from the property of the association to the treasurer of the association. Of the board of trustees the president and treasurer of the association are ex officio members.

The high prices which prevailed at the close of the war occasioned some delay in building, but in the latter part of 1867 the corner-stone of the present building was laid, and the edifice was completed in the following year. It is 75 feet wide on Montague street and 92 feet deep. Exclusive of the basement, it is three stories high, the main portion of the first story being occupied by the reading room, the library covering an equal area with the reading room and taking in the second and third stories. The total cost of the library building was \$159,000; and the total of the building fund subscriptions having amounted to \$169,000, the balance, amounting to \$10,000, was funded. The number of individual subscribers to the building fund was within 250, the largest single subscriptions being one of \$12,500, one of \$10,000, two of \$5,000, and two of \$2,000. There were sixty-two individual subscribers to the book fund of \$50,000, one of whom subscribed \$20,000. The next highest subscription was \$2,000. Most of those who subscribed to the book fund had also subscribed to the building fund.

Fortunately for the library and for those who were to be the recipients of its benefits, the immediate ability to add largely to the number of books was amply secured to it. The generous offer of Mr. S. B. Chittenden to subscribe the sum of \$20,000, if \$30,000 additional could be

raised, the whole sum to be devoted to the purchase of books, was promptly responded to by other friends of the association, so that the whole amount was secured within the period of two months; thus lifting the library, at the very opening of its new career, from a condition of incompleteness to a comparative fulness of resource. The fruit of this wise and provident generosity is shown in the rapid growth of the library during the six years following.

The library on the day of opening, January 18, 1869, had upon its shelves 20,994 volumes.

The annual additions to the library since 1869 (exclusive of pamphlets and unbound numbers of serials) have been as follows :

|               | Volumes. |
|---------------|----------|
| 1869-'70..... | 4,589    |
| 1870-'71..... | 5,534    |
| 1871-'72..... | 10,126   |
| 1872-'73..... | 3,641    |
| 1873-'74..... | 3,411    |
| 1874-'75..... | 2,364    |

The present classification of the library, in detail, as reported March 25, 1875, is subjoined as follows :

|  |        |
|--|--------|
| History, topography, voyages, and travels.....           | 7,503  |
| Theology and ecclesiastical history.....                 | 3,700  |
| Science and industrial arts.....                         | 3,481  |
| Biography.....   | 4,256  |
| Natural history.....                                     | 1,171  |
| Fine arts.....   | 1,382  |
| Collective works, encyclopædias, etc.....                | 1,379  |
| Philosophy, education, language, etc.....                | 1,762  |
| Political, social, and economic sciences.....            | 2,449  |
| Poetry, the drama, essays, etc.....                      | 4,017  |
| Fiction.....   | 9,696  |
| Works in foreign languages not elsewhere classified..... | 1,806  |
| Periodicals.....   | 4,792  |
| Miscellaneous, including duplicates.....                 | 2,863  |
| Total number of volumes.....                             | 50,257 |

All but a small portion of this sum of \$50,000 has now been expended, and the library will shortly be entirely dependent upon the current receipts from membership and the income, about \$4,000 a year, derived from property belonging to the association. It is, therefore, felt to be of vital necessity that the general book fund of the library should be very largely increased, if the demands of the future are to be adequately met.

A new and pretty full catalogue of the library is now printing, arranged by authors, titles, subjects, and classes.

*Annual circulation of books, 1869-'74.*

|           | Volumes. |
|-----------|----------|
| 1869..... | 61,582   |
| 1870..... | 96,457   |
| 1871..... | 111,710  |
| 1872..... | 121,313  |
| 1873..... | 116,169  |
| 1874..... | 119,308  |

*Membership.*

The total membership stood on the 20th of March, 1875, as follows :

|  |       |
|--|-------|
| Permanent members by the payment of \$500..... | 160   |
| Life members by the payment of \$100.....      | 515   |
| Life members by the payment of \$50.....       | 50    |
| Annual members by the payment of \$5.....      | 2,332 |
| <hr/>  |       |
| Total .....                                    | 3,057 |
| Extra subscriptions of \$3.....                | 173   |

The total receipts from the membership, including initiation fees, annual dues, fines, extra subscriptions, etc., amounted during the year 1874-'75 to \$13,013.60.

*Terms of subscription to the library and reading rooms.*

Any person may become a subscriber upon the following terms, which entitle the subscriber to the use of the library and reading rooms, and also to attendance upon the classes at reduced rates, viz :

For clerks, students, journeymen mechanics and apprentices, and for ladies, first year, \$1 initiation fee, and \$4 per annum, payable quarterly if desired ; thereafter, \$5 per annum, payable quarterly if desired ; for merchants and professional men, and all other persons, \$5 per annum, payable in advance.

Any person may become a life member by the payment of \$100. A permanent membership is created by the payment of \$500.

## THE LONG ISLAND HISTORICAL SOCIETY.

An account of the library of this society will be found in Chapter XIII, p. 353, of this report.

## LIBRARY OF THE YOUNG MEN'S CHRISTIAN ASSOCIATION.

The library of the Young Men's Christian Association dates from the organization of the association itself, in November, 1853. The library numbers about 8,000 volumes. The first catalogue was issued in 1861 ; another catalogue was issued in 1872. The average circulation of books is about 40,000 per annum.

## YOUTHS' FREE LIBRARY OF THE BROOKLYN INSTITUTE.

This library has, under its present name and its original name of the Apprentices' Library, been in existence over half a century, having been established in 1823. The number of volumes in the library is about 10,000. In 1873 the number of persons using the library was 2,000, and the circulation was about 40,000 volumes. In 1874 there was some falling off in these two particulars. The income of the library is reported as "barely sufficient to keep the library from decay and to supply a few new books yearly," but, as one of the departments of the Brooklyn Institute, it is entitled to rooms in the institute building, rent free, and to one-half of the net income from the building by rent or otherwise.

## HAMILTON LITERARY ASSOCIATION.

This association was organized in 1830 and incorporated in 1842. The association has limited itself to the special purpose of a debating society, but has collected 1,000 volumes for the use of its members.

## BROOKLYN LIBRARY ASSOCIATION, EASTERN DISTRICT.

The Brooklyn Library Association of the Eastern District was organized in January, 1865, and incorporated April 3, 1865. The present number of volumes is 10,000. Three hundred and fifty volumes were added during 1874-75. The circulation of books is about 17,000 per annum. The terms of subscription are \$4 for the first year and \$3 subsequently.

## HAWKINS'S CIRCULATING LIBRARY.

This library was established in 1848, with about 400 volumes, by the father of the present proprietor. It now numbers about 17,000 volumes, English and German, composed entirely of fiction. Circulation for the past five years: 1870, 21,210; 1871, 21,963; 1872, 22,876; 1873, 23,933; 1874, 25,310.

## OTHER COLLECTIONS.

Other libraries in Brooklyn numbering each more than 1,000 volumes which are more or less accessible to the public are the following, further statistics of which will be found in the general table at the end of the volume.—EDITORS.

|  | Volumes. |
|--|----------|
| Brooklyn Collegiate and Polytechnic Institute..... | 3,000    |
| Brooklyn Heights Female Seminary.....              | 10,000   |
| Brooklyn Law Library .....                         | 5,325    |
| Carroll Park School .....                          | 1,500    |
| House of the Good Shepherd.....                    | 1,080    |
| Packer Collegiate Institute .....                  | 3,580    |
| St. Francis College .....                          | 13,970   |
| Union for Christian Work .....                     | 1,500    |

## IV.—LIBRARIES IN CHARLESTON AND IN THE SOUTHERN STATES.

BY ARTHUR MAZYCK,

*Librarian of the Charleston Library Society, Charleston, S. C.*

In order to understand the present condition of the libraries in the Southern States, and the causes which have led to their number being so small and their existence so feeble, compared with those in other parts of the United States, we must go back somewhat and see what was their state previous to the war which has so materially altered the conditions of society throughout the whole country, and especially in these States.

We may remark that the conditions were not then especially favorable to the growth of these institutions. Several of the States were

new and had not reached sufficient maturity for the development of literary culture, while in the older States the peculiarly conservative nature of society tended rather to refinement and cultivation among the upper classes than to the dissemination of education among the people generally. The country was agricultural and mostly in the hands of large proprietors, who, with the members of the learned professions and wealthy merchants, formed the leading class in all, or nearly all, of the communities. The middle class, or tradespeople, formed but a small and uninfluential part of the population, and the laboring class consisted almost entirely of negro slaves. It followed naturally, from this state of things, that the need of public libraries, open to all, was little, if at all, felt. There was no lack of the means of culture, for the private collections of books were numerous and valuable. The standard of education among the better classes was high. Most men acquired, in the course of their collegiate studies, a knowledge of literature and taste for books, which afterward led them, by the purchase not only of current literature, but in many cases, also, of rare and valuable works, (handed down from father to son, and added to in each generation,) to form libraries complete and well selected, and not unfrequently numbering from 5,000 to 10,000 volumes.

The colleges and public schools were generally well supplied with libraries for the use of their students, and afforded the latter ample means for pursuing their studies beyond the range of ordinary text books, and for forming habits of reading and study.

In addition to the private collections and those of the schools, there existed in most of the cities literary or library societies, owning many thousand volumes, which might be ranked under the head of public libraries, inasmuch as they belonged to corporations or societies which were open, under certain restrictions, to all persons in the community; but they were not in any sense free libraries, being supported for the most part entirely by the subscriptions of their own members, and used only by such members. Being under the direction of their own officers, and independent of State or municipal control, they do not perhaps occupy as conspicuous a position in the statistics of the country as their importance would warrant; but we shall find as we go on that they comprise the largest part of the present available libraries in the South.

Thus it happens that, in communities where it is a well established fact that a high state of culture and even considerable learning have always existed, the reports show but a small number of public libraries, and those not generally extensive or very valuable.

It may be interesting to note here some particulars concerning private libraries and the fate which has befallen them. The loss of books caused by the late war is irreparable. Thousands of volumes in every department of literature, a large proportion of which can never be replaced, were destroyed, as well as much material, in the shape of correspondence, deeds, pamphlets on local topics, etc., which would have

proved invaluable to the historian. During the march of Sherman's army through Georgia and the Carolinas, it is a well known fact that hundreds of private dwellings were burned to the ground with everything in them; and where this was not done, the recklessness of the soldiers and the unrestrained license of the negroes destroyed what fire had left. Nor was this confined to the route of the main army. Wherever the United States obtained a foothold, the property was turned over to the negroes, without an effort, save in rare instances, to preserve any part of it. The writer could speak from actual knowledge of many cases of this kind, but one will be sufficient for illustration.

On a plantation near the coast of South Carolina there was a library of 6,000 to 8,000 volumes of the rarest and most valuable kind. The owner, a wealthy planter, had used all the efforts that a cultivated taste and abundant means could suggest to enrich his collection from every source, as well in Europe as in this country. It was miscellaneous in character, abounding more in elegant and unique editions, ancient manuscripts, and handsomely illustrated works than in any one branch of literature, but was specially rich in books relating to the early history of America. The plantation being somewhat remote from the scene of military operations, and transportation being difficult, it was not thought necessary to remove the books, and they remained in safety until some time in 1864, when a United States gunboat went up the river on which the plantation was situated, and the officers, landing, gave it into the possession of the negroes. There followed a scene of the most wanton destruction; the house was ransacked, and every article of value or ornament destroyed or carried off. The books shared the fate of everything else; hundreds of volumes were torn to pieces and thrown out of doors. Eye-witnesses have assured me that they saw the plates of Audubon used for kindling fires; and recently, plates from the Boydell Shakspeare, and Hogarth were found stopping the cracks of a negro house. About a hundred volumes were found scattered through the house; and after the war about two hundred more, many of them in broken sets, were sent on by a gentleman of one of the northern cities, who said he had been a passenger on board the gunboat, and had succeeded in saving them. Thus perished a collection which it had taken years of careful search and large sums of money to bring together, and which contained much that can never be replaced. As already stated, the above is not a solitary instance. Numerous cases, almost exactly similar, occurred throughout all the States, and a little investigation would show deplorable losses of this character, which would startle those whose attention has not been called to this subject.

#### CHARLESTON LIBRARY SOCIETY.

We come now to the library societies of the South, and will take as our first example the Charleston Library Society, which is the oldest,

and which stands probably in the front rank of such associations. A sketch of its history will give us an idea of the general character of such institutions in the Southern States, and will serve to show how they partook, to a certain extent, of the nature of private collections rather than of what are usually considered public libraries.

As the preface to a catalogue of the books, published in 1826, informs us—

The Charleston Library Society owes its origin to seventeen young gentlemen who, in the year 1748, associated for the purpose of raising a small fund to “collect such new pamphlets” and magazines as should occasionally be published in Great Britain. They advanced and remitted to London ten pounds sterling as a fund to purchase such pamphlets as had appeared during the current year, acting at first under a mere verbal agreement and without a name. Before the close of the year their views became more extensive, and, on the 28th December, rules for the organization of the society were ratified and signed, when they assumed the name of a *Library Society*, and made arrangements for the acquisition of books as well as of pamphlets.

Their rules lie before us, engrossed in beautiful penmanship, in a vellum covered volume, yellow with age, and their preamble is worthy of insertion here as showing the desire for learning which animated the men of that day, and which should be impressed upon us, whose opportunities for acquiring information are so vastly extended:

As the mind of Man has a pleasure in contemplating Nature, and of making Discoveries, so it is happily disposed to a desire of Communicating its Knowledge and Attainments to Others, and of having Intelligence of what passes in distant parts of the Universe.

To those, undoubtedly, We owe the Inventions and Improvements daily made in Art, Sciences, Commerce, Agriculture, and Mechanism: which are constantly Observed to flourish in every part of the World, in proportion to the Opportunities it has of knowing what passes elsewhere.

The great disadvantage this Place labours under for want of such regular Intelligence is but too heavily felt, and, therefore, Every person ought to Contribute with all his power to the remedy of it. It is with this design that the Library Society have, this Twenty-Eighth of December, Anno One Thousand Seven hundred and forty-Eight, Agreed to and subscribed the following Rules.

From this small beginning the society steadily advanced, drawing into the list of its members the most cultivated and wealthy residents of the community, and making, by degrees, rich additions to its volumes. We may mention, by the way, that at a meeting held on the 1st of April, 1749, we find Mr. William Strahan, of London, elected book-seller to the society. Any reader will recognize the name as that of a prominent English publishing house at this day.

We find on the list of presidents the names of such men as Charles Pinckney, Gabriel Manigault, his excellency Hon. Will. Henry Lyttleton, the Hon. Will. Bull, Lord Charles Gr. Montague, Gen. Charles C. Pinckney, Ralph Izard, Stephen Elliott, and others more or less distinguished in the history of Carolina for ability and learning.

The advance, however, while steady, was not rapid, and consisted rather in the value of the particular sets of books purchased than in the number of volumes of general and current literature added. Most

of the members, as already stated, were men of means, and the library was used by them not so much for circulating books among readers generally, as a place of deposit for such works as were too large or expensive to be owned by single individuals. Hence, we find on its shelves many treasures for the lover of books—five editions of the English classics; huge folios of the Fathers; rare old pamphlets on the history of this country; works like the famous *Antiquities of Piranesi*; the splendid *Description de l'Égypte*; a second folio of *Shakspeare*, and a host of others which our space does not permit us to refer to more particularly.

This easy and gradual advance continued until the breaking out of the late war, when, of course, all progress ceased; and it being found in 1863 that the books were no longer safe in Charleston, the greater part were removed to Columbia, where they were deposited in the university buildings, then used as a hospital. Here they fortunately escaped destruction.

Meantime the building of the society was broken into on the evacuation of Charleston, and the books left in it, comprising all the fiction and other light literature, as well as a considerable number of law and miscellaneous books, were destroyed or carried off. The General Government then took possession of the building and used it as a custom house for several months.

In January, 1866, the society was re-organized by those members who had re-assembled in Charleston, and it was determined to bring back the books and re-open the library. This was accomplished after surmounting many difficulties and obstacles, for the funds of the society were entirely exhausted. The officers of the Government had not only paid nothing for the use of the building, but had allowed it to fall into an almost ruinous condition, and the members were utterly impoverished; many of them unable to meet even their annual dues, and none of them in a condition to make any extra subscription to the society. By persistent effort, however, and the exercise of strict economy, the debts of the society were gradually paid off, subscriptions to reviews and magazines were renewed, a few books purchased, and some new and active members introduced, so that by the beginning of the year 1871 the affairs of the society began to wear a hopeful aspect.

In the mean time the Apprentices' Library Society, an association of somewhat later date, was re-organized, and efforts were made to combine the two societies. The Apprentices' Library Society had attained some growth before the war, and was of a more popular character than the older society. The building and all the books were destroyed by fire in 1861, but a small fund remained, and the few surviving members exerted all their efforts, with considerable success, to revive the society. In October, 1874, the two societies were amalgamated under the name and charter of the Charleston Library Society, and at present the prospects of that society are extremely good. The number of readers has largely increased, new books are constantly purchased, and it is hoped

within a short time to catalogue and arrange them so as to display to the best advantage these really valuable stores.<sup>1</sup>

We have been thus particular in describing this society because we believe it to be a fair example of similar associations throughout the South. A correspondence with the principal libraries develops the fact that most of them have followed the same course. Those established before the war, well sustained up to that period, but not greatly extended, were, of course, much reduced, and in some cases altogether destroyed. They have since revived with more or less vigor, and generally with a view to greater popularity. Many new ones have been started, and have, as a rule, proved successful. The scope of this paper does not permit us to give the history of each of the library societies and public libraries; but we select a sufficient number of instances of various kinds to give, we hope, a fair general idea of their condition and prospects.

We begin with the history of the Georgia Historical Society, at Savannah, Ga., which ranks among the most useful and active. The librarian writes:

Before the war little was done by our society toward increasing the library, but since 1865 the number of books has been nearly doubled; and in 1871 the second article of the constitution was amended by adding the words, "and to create a library for the use of its members." The number of volumes in the library is now over 9,000, and the increase during the past year was 728 volumes. . . . No persons are allowed to draw books except members of the society and their families and the female teachers in the city schools. Our rooms are open to visitors, and persons desiring to consult books of reference are allowed to do so. We have a reading room, where the leading papers of the country are kept on file, and we take a large number of American and foreign periodicals.

The library is soon to be moved into a new building, constructed for it by a wealthy family of Savannah at a cost of about \$50,000. It is to be wished that more such acts of generosity and public spirit could be recorded throughout the country.

The Galveston Free Library, of Galveston, Tex., presents a most gratifying report. The Chamber of Commerce of Galveston, which founded the library under the name of the Galveston Mercantile Library, finding the demand for books greater than their funds would supply, offered to give the library to the city on condition that it should be sustained and made free to the people. The offer was accepted, and the ordinance was passed in March, 1874, accepting the offer and providing for the permanent support of the library by an appropriation of \$250 per month, and by such regulations as afford the amplest facilities for the rapid increase of the number of books and their free use by all residents of Galveston over twelve years of age.

---

<sup>1</sup> A new Catalogue of the Books and Pamphlets belonging to the Charleston Library Society, Charleston, 1876, compiled by Mr. Mazyck, has been received. It forms an octavo volume of 372 pages, and is arranged alphabetically by authors, subjects, and titles, with imprints.—EDITORS.

The bulletin and reports of this library show an admirable selection. Some of the departments, such as local history, for instance, are made particularly complete; but there is also a sufficient supply of general literature to meet the wants of all classes of readers. The collection numbers between 8,000 and 9,000 volumes.

In the published account of the twenty-second annual meeting of the Petersburg Library Association, Petersburg, Va., March 4, 1875, the report of the board of managers gives the following figures :

|  |        |
|--|--------|
| Number of volumes January 1, 1861 .....        | 5, 022 |
| Number at the close of the war .....           | 2, 329 |
| Number lost and destroyed during the war ..... | 2, 906 |
| Number now in library .....                    | 3, 519 |
| Number bought the present year .....           | 91     |
| Periodicals taken .....                        | 10     |
| Newspapers taken .....                         | 8      |

The report gives some hope of an improved condition of affairs, and makes an earnest appeal to the citizens for aid.

The librarian of the Library Association of Little Rock, Ark., writes:

The Library Association of Little Rock was organized in November, 1867. It is for the exclusive use of members of the association. The present membership is about one hundred and fifty, and the condition and prospects better than they have ever been before; the number of books, 1,000; annual increase, 250. . . . Our principal readers are of the middle and upper classes. We have to regret a lack of taste for reading in the lower classes throughout, and among the young men of the upper and middle classes. Scarcely any of our clerks and younger men of business, or even of the professions, show any inclination to patronize a public library.

The Young Men's Library of Atlanta, Ga., exhibits perhaps the most rapid advance that we have yet noticed. The librarian informs us that the library and reading room were established in August, 1867, with twenty or thirty members, and an "armful of books." They have now fully six hundred and fifty members and over 4,500 volumes, and additions are made almost weekly by purchase or donation. Their collections considerably exceed their expenses, so that they have now some \$2,500 invested as the nucleus of a building fund. Their present rooms are spacious and well ventilated. The circulation in 1874 was nearly 15,000 volumes, and the librarian expects a considerable increase during the present year.

#### STATE LIBRARIES.

Our attention is next directed to the State libraries, that is to say, those at the capitals of each State, and supported by legislative grants. These are in general used merely for the deposit of official documents and publications, and are for the use only of members of the legislature and State officials; but in some cases they are more extended and are made of real service to the people.

The Virginia State Library, at Richmond, Va., receives a handsome grant of from three to five thousand dollars per annum; contains about 35,000 volumes, largely made up of general literature, and is open, under what restrictions we are not precisely informed, to all citizens.

The Mississippi State Library, at Jackson, Miss., is most admirably sustained. Its largest department is law, and we think it may justly claim to be the best law library in the Southern States; but there is also a fair proportion of other literature. We learn that the number of volumes of law is 9,000; of general literature, *i. e.*, theology, history, biography, poetry, and the drama, etc., 3,000; miscellaneous, including public documents, about 4,000; pamphlets, (various,) 3,500. It has a yearly State grant of \$5,000, which is under the control of the governor and the judges of the supreme court. It is expected that 2,000 volumes will be added during the year 1875-76. The library is open to the bar and to citizens generally. With such advantages this library bids fair to become one of the most important in the Southern States, and we cannot too highly commend the wise policy of the Mississippi State government in thus liberally supplying one of the greatest needs of the people and furnishing them with the best possible means of improvement.

It would be well if the legislatures of all the Southern States would turn their attention to this matter, and according to their means and opportunities follow the example of Virginia and Mississippi. Even if the collections were not made so general, it would be of incalculable service to have in each State a library where particular kinds of information could certainly be obtained.

#### COLLEGE LIBRARIES.

The libraries of educational institutions do not properly belong to the subject of this paper, and we have not extended our inquiries far in that direction. Most of the universities and colleges are provided with libraries for the use of their students, which, of course, have followed the fortunes of the institution to which they are attached. Many of these are carefully gathered collections, and some of them rank very high. The Library of the University of Virginia was the largest and best in the South, and that of the South Carolina College<sup>1</sup> was, in proportion to the size of the college, not far behind it. The former, we believe, is still well sustained, while the latter has shared the fate of the college, and is not only poorly supported, but, we are informed, many of the books have been lost or stolen.

It is much to be desired that these college libraries should be opened to the public. If the citizens of towns in which colleges are situated were allowed the use of the libraries under certain restrictions, and perhaps on payment of some fee, it would most likely prove a mutual benefit. The students do not need the use of a very great number of volumes at any one time, and many books lie on the shelves unused

---

<sup>1</sup> The name of this institution was changed, in 1865, to the University of South Carolina, and the library numbered according to the last returns 28,250 volumes, including a students' society library of 1,250 volumes. A brief sketch of the library will be found on pages 121, 122, of this report.—EDITORS.

which might be turned to valuable service in the community. On the other hand, the citizens, having their interest and attention drawn to the institution, would be prompted to give it a more liberal support.

#### CONCLUSION.

But we have digressed somewhat from the strict limits of our subject, and must return to say with regret that, notwithstanding the occasional instances of favorable progress that we have been able to note above, a view of the condition of public libraries in the Southern States presents after all but a barren prospect. In proportion to the population their number is exceedingly small; they are poorly supported; are conducted on no general or fixed system, and are confined usually to the large cities, while the smaller communities in these States are, for the most part, absolutely destitute of this most necessary means of education and refinement.

The greatest number of volumes in any one library is 35,000, which is small when compared with many libraries in the northern and western cities. Of course a list of the contents of the libraries in the South would not include all the books which are read by the people, for besides the books purchased by private individuals, the number of which is still considerable, notwithstanding their reduced means, there are all through the country book clubs and private circulating libraries which supply a large number of readers; but we have to repeat that the number of public libraries is far, very far, short of what it should be and what the needs of the people demand. We do not believe that this state of things arises from any lack of interest on the part of the people, for we have already seen that among some classes, at least, the desire for education is very strong, and it is easy to show how much the need of facilities for obtaining it is felt. The difficulty is chiefly financial. There are very few persons in the Southern States whose wealth is sufficient to enable them to do anything toward the endowment of public institutions; and while we could record here some noble instances of public spirit, we regret to find that it does not generally exist among the present possessors of wealth, and the majority of the members of library societies are really unable to do more than pay a very small annual subscription.

Unfortunately, the present political condition of most of the States precludes the possibility of any help from State or municipal sources. An appropriation which should take little from the public treasury would do incalculable benefit in this direction; but while much political capital is made out of grand schemes for education in general, no serious effort is made to carry out those schemes; and even where funds are actually appropriated by State or city, there is sometimes little left for their proper object after they have passed through the hands of three or four officials. But the need exists and is deeply felt—how deeply

it is difficult to appreciate without personal observation, though every statement we have made tends to show it.

We have seen a people fond of literary culture, amply supplied with books in their homes and in their colleges, having almost every volume swept away at a blow, and at the same time losing the means to replace their lost books, and even to keep up with the publications of the day. We have seen earnest men trying to gather up the fragments and organize associations to continue the work; and, unfortunately, we have seen how little after all has really been accomplished, owing, it can only be supposed, to the absence of systematic and combined effort among themselves and a little aid and encouragement from without. There is no time and no place where well sustained public libraries are not valuable, and indeed necessary to the education and refinement of the people; but in the cities and towns of the Southern States at present the need is such that we are scarcely speaking too strongly when we say that upon its supply will depend whether the people of these States rise again to their former position in the country or sink into a condition of dependency on the more enlightened communities.

Young men are now compelled to leave school and go into business long before their education is completed. Many of them are accustomed to associate a high intellectual culture with their social standing, and, being unable to attain this, they must necessarily set for themselves a lower standard; besides, we know that it is utterly impossible for men to rise very high in any department without thorough education. The mind naturally narrows itself to its surroundings, and we can never expect to have great statesmen or professional men, or even large minded and enlightened merchants, until we give our men the opportunities which their own resources do not permit them to enjoy. But the higher classes are not, perhaps, the greatest sufferers. The refinements of their homes, at any rate, serve as a check to keep them from going down altogether; but for those who are without such restraining influences, everything tends to lower their condition as regards literary improvement. Every news-stand is filled with dime novels and illustrated papers of the most vicious character. These are constantly thrown in the way of the people, young and old, and cannot fail to have a most pernicious effect, sooner or later, on the public morals.

There is also another class which now forms a considerable part of the readers of most of the southern cities. Besides those persons who are traveling for business purposes, there are every winter thousands of people from the Northern States who come to the South seeking a more genial climate. They are temporarily without employment, and time hangs heavily on their hands when deprived of books for amusement or instruction. Being generally but a short time in any one place, they are not disposed to purchase books to leave behind or be burdened with on their journeys, and consequently they depend on the public reading rooms. As these people are generally well off, they can afford to pay

for the privilege of reading, and thus do something toward the support of the library which they use.

Our experience does not enable us to say much on the subject of free libraries, but we are disposed to think that the payment of a small fee, or rather monthly or annual subscription, is not a disadvantageous regulation. It carries with it a certain accountability, and tends to make people value more highly library privileges. This we think is especially the case where persons are required to become members of a society. Each feels a personal interest in the success of the enterprise, and is apt to use efforts to induce others to feel a similar interest. To meet the wants of those who are entirely without the means of subscribing, some way might be devised to enable them to obtain books through members. A very good plan exists at present in the Charleston Library Society, and perhaps in some other libraries. No person under twenty-one years of age can become a member, but each regular member is entitled to the privilege of recommending a certain number of minors, for whose proper conduct in the use of the library he is responsible. By this means its benefits are widely extended at a small cost to individuals, and the society is protected in its property by the liability of its members for injury done either by themselves or by the minors introduced by them.

The working regulations of libraries, however, are of comparatively small importance, and can easily be arranged according to the circumstances of each. The vital matter is to establish these institutions and put them once on a firm footing, and we are convinced their success would follow as a certainty. How this is to be done it does not lie in our province to suggest, further than the few observations we have made on special cases, and indeed it would require very careful study of the subject to determine upon a plan which would meet all the requirements. At present we fear that our only hope is through the efforts of individuals in forming and keeping up literary societies and extending their benefits as widely as possible, and those efforts should meet with the warmest support and encouragement from the Government as well as the people; and no means or opportunity should be overlooked to impress upon our people the immense value and importance of these institutions to them, and the duty that rests on every citizen to use his utmost abilities to encourage and aid them.

## V.—PUBLIC LIBRARIES OF CHICAGO.

BY WILLIAM F. POOLE,

*Librarian of the Chicago Public Library.*

## CHICAGO HISTORICAL SOCIETY.

The Chicago Historical Society was organized in April, 1856, and at the time of the great fire of October, 1871, had what was supposed to be a fire-proof building, which had cost \$60,000, and a valuable collection of historical books and pamphlets. On the 19th of November, 1868, the new building was dedicated with appropriate exercises. From the address delivered on the occasion by Hon. Isaac N. Arnold, it appears that the society had then 15,412 bound volumes, 72,104 pamphlets, 1,738 files of newspapers, 4,689 manuscripts, 1,200 maps and charts, 380 cabinet collections, and 4,682 miscellaneous objects, including prints. Up to the time of the fire constant additions were made, and it was then the most valuable historical collection in the Northwest. Dr. William Barry, the efficient secretary and librarian, was the person to whom the largest share of credit was due in collecting these materials. In this work he had the active co-operation and pecuniary assistance of the officers and members, among whom were William H. Brown, William B. Ogden, John Y. Scammon, Luther Haven, George Manierre, and others. The library was especially strong in the documents and sessional papers of the several States, in works relating to the Indian tribes, the early French explorations, the Jesuit missionary enterprises, and in books and pamphlets illustrating the history of the West. The building and all its contents were consumed in the great fire; not a book, pamphlet, or paper being saved.

Mr. Scammon, with the aid of a few of its members, began soon after to make the nucleus of a new collection, and friends from abroad sent in donations. These were temporarily stored in a block on Wabash avenue, when the second great fire of July 14, 1874, swept over that part of the city, and the collection was again wholly consumed. The society has maintained its organization, and is again preparing to resume active operations. It has trust funds which will soon be available for restoring its collection. Its library now numbers only 300 volumes.

## YOUNG MEN'S ASSOCIATION LIBRARY.

In January, 1841, when Chicago had less than 5,000 inhabitants, the Young Men's Association Library was organized, and for thirty years, till it was destroyed in the great fire of 1871, was the chief library of circulation in the city, and maintained, also, a reading room for newspapers and periodicals. Its growth was slow, and by no means commensurate with the growth of the city. In 1865, when its last catalogue was printed, it had nominally 9,210 volumes, but of these a careful examination of the shelves and the register of circulation showed that 2,121 volumes were missing and lost. The average increase in the number of books for several years had been about 600 volumes. The average daily circulation in 1865 was 177 volumes. It had a membership of

1,659 persons, of whom 157 were life members, 16 honorary members, 134 lady members, and 1,352 annual paying members. The rules prescribed the payment of an initiation fee of \$2 and an annual tax of \$3. A considerable income was also derived from the profits of an annual course of public lectures. The latest official statistics we have found are those of 1865. From that time to 1871 the library was considerably increased, and had, at the date last named about 18,000 volumes; among them was a set of the British patent reports, which had been given by the British government, numbering about 2,000 bound volumes, the only set in the West. Nothing was saved from the library in the great fire, and no attempt has since been made to re-organize the association and re-establish the library.

#### CHICAGO PUBLIC LIBRARY:

This library had its origin in the sympathy felt for Chicago in England after the great fire of 1871. In addition to the money subscription which was opened in England, a number of English gentlemen — among whom, perhaps, Mr. Thomas Hughes (author of *Tom Brown at Oxford*) took the leading part — started a subscription of books to supply the losses sustained by Chicago in the destruction of her libraries. An appeal was made to authors, societies, and public institutions to give their books, and about 7,000 volumes were thus contributed. The British Museum presented all its own publications. The master of the rolls gave the *Chronicles and Memorials of Great Britain and the Calendar of State Papers*. The University of Oxford gave the publications of the Oxford University Press, about 250 volumes elegantly bound. Her Majesty the Queen presented *The Early Years of the Prince Consort*, inscribed with her own autograph; and many of the living authors of England sent in their books to the committee in London. In the case of authors deceased, as Lord Macaulay and Dr. Arnold, of Rugby, the relatives donated their books. The inscription on the book-plate in the volume presented by Her Majesty is as follows: "Presented to the city of Chicago, towards the formation of a free library, after the great fire of 1871, as a mark of English sympathy, by Her Majesty the Queen Victoria." An autograph inscription is also made on the fly-leaf.

There was then no library organized in Chicago that could receive these books. An application was made to the general assembly of the State for a general public library act which would allow the city to establish such a library and support it by public taxation. Such an act was passed by the State legislature March 7, 1873. A reading room was immediately started in the city building, on the corner of Adams and La Salle streets, and the books which had been donated in England and elsewhere were here stored. A librarian was appointed, who entered upon his duties January 1, 1874. Temporary rooms were secured, on the corner of Wabash avenue and Madison street, which were occupied March 16, 1874, and the library was opened for circulation on the 1st of May, with 17,355 volumes, of which about 13,000 were adapted for gen-

eral circulation. The official year closed with the same month of May. In the last week of that month the average number of volumes issued daily was 437.

The number of volumes in the library at the date of the next annual report, May 31, 1875, was 39,236, of which 20,122 volumes had been added during the year by purchase and 969 by gift. The amount expended for books was \$28,410.63. The number of registered book borrowers was 23,284, of whom 14,657 were males and 8,627 were females. Book borrowers are required to deposit a certificate, signed by a responsible party, stating that the guarantor will be responsible for the return of the books and the payment of fines incurred. The total number of books issued for home reading was 403,356, or a daily average of 1,322. The number of serials kept on file in the reading room was 368; of these, 288 were periodicals and 80 newspapers. The whole working force of the library included 26 persons. The amount paid for salaries was \$15,545. The reading room is kept open on Sundays as on secular days. The average number of readers on Sunday was 560, against 423 reported the previous year. The entire running expenses were about \$25,000 a year. The library is supported wholly by public taxation, the State law allowing a tax of one-fifth of a mill on the dollar valuation to be laid for this purpose. On the present valuation of the city, this would give an annual income of about \$60,000. The city council, however, has the authority to order a levy for a less amount, if it sees fit. The library now numbers 48,100 volumes, and is situated on the corner of Dearborn and Lake streets.

#### OTHER COLLECTIONS.

A list is here appended of the other public or semi-public libraries in Chicago, which number each more than 1,000 volumes. Further statistics of these and minor collections may be found in the general table at the end of this volume.—EDITORS.

<sup>1</sup> A notice of the library will be found in the chapter on Theological Libraries, Chapter IV, p. 143.

<sup>2</sup> Ibid., p. 144.

## THE NEWBERRY LEGACY TO CHICAGO.

The largest legacy made for a public library in this country has recently fallen to the benefit of the citizens of Chicago by the death of Miss Julia Newberry, the last surviving daughter of the late Walter L. Newberry, of Chicago. She died at Rome, Italy, April 4, 1876. The value of the Newberry estate is now estimated by the trustees to be \$4,000,000. One-half of the estate is to descend to the heirs of the testator's brothers and sisters, and the other half is to be devoted to the foundation and support of a free public library, to be situated in the North Division of Chicago.

Mr. Newberry died on the 6th of November, 1868, leaving his whole estate to two trustees, Mark Skinner and E. W. Blatchford, as executors and trustees, with full powers to administer the same, and to appoint their successors. After providing for the widow, his two unmarried daughters, and other relatives, his executors were required to pay to his two daughters, or to the survivor of them, annually, the net income of the estate. After the death of his daughters, if they married and had issue the estate was to be divided among such issue. The elder daughter, Mary, died two years ago, unmarried. The younger daughter, Julia, also unmarried, died, as stated above, in April, 1876. This contingency was provided for in the testator's will as follows:

In case of the death of both of my said daughters, without leaving lawful issue, then immediately after the decease of my wife, if she survives my said daughters, but if not, then immediately after the decease of the last surviving one of my said daughters, my said trustees shall divide my estate into two equal shares, my said trustees being the sole judges of the equality and correctness of such division, and shall at once proceed to distribute one of such shares among the lawful surviving descendants of my own brothers and sisters, such descendants taking *per stirpes* and not *per capita*.

The other share of my estate shall be applied by my said trustees, as soon as the same can conveniently be done, to the founding of a free public library, to be located in that portion of the city of Chicago now known as the "North Division." And I do hereby authorize and empower my said trustees to establish such library, on such foundation, under such rules and regulations for the government thereof, appropriate such portion of the property set apart for such library to the erection of proper buildings and furnishing the same, and such portion to the purchase and procurement of books, maps, charts, and all such other articles and things as they may deem proper and appropriate for a library, and such other portion to constitute a permanent fund, the income of which shall be applicable to the purpose of extending and increasing such library; hereby fully empowering my said trustees to take such action in regard to such library as they may judge fit and best, having in view the growth, preservation, permanence, and general usefulness of such library.

The widow, in lieu of the provisions made for her in the will, elected to take her right of dower, and hence her interests in the estate are secured and fixed, whether the ultimate purposes of the will be carried out soon, or be postponed till her death. It is understood to be the wish of the trustees, the widow, and the testator's relatives that the foundation of the library should be commenced as early as possible. Of the estate, nearly a million dollars are in available funds, and the

remainder is in real estate in the city and suburbs of Chicago which is rapidly appreciating in value. The trustees have expressed the opinion that in ten years the estate will be worth ten millions. Judge Skinner two years ago, being about to make a visit to Europe, resigned his trusteeship, and Mr. William H. Bradley was appointed his successor. Judge Skinner, however, still resides in Chicago, and the trustees will have the benefit of his large business experience and his literary culture in the organization of the library. The confidence which the testator felt in him is expressed in the following clause in the will:

In consequence of an acquaintance and friendship now subsisting for thirty years between myself and my said trustee, Mark Skinner, I have such confidence in his judgment, that, whilst I do not anticipate that any conflict of opinion will arise in regard to the management of my estate, it is my wish that so long as he remains trustee of my estate, his opinion in regard to the conduct and management of the same may prevail in cases where differences of judgment may occur.

It is too early now to predict, much less to state with any accuracy, the precise form in which this noble gift to Chicago will be administered. It will be seen that it is not a gift to the city as a corporation, and that the city government has no part or function in its administration. The whole management is in the hands of two trustees, with full powers to appoint their successors. Two more estimable and trustworthy citizens could not be named than the present trustees. The testator provided that no bonds should be required of his original appointees, and he left it with them to decide whether bonds should be required of their successors. It is probable that, with so large a foundation, the library will be independent and form no union with any existing institutions. It is probable, also, that the trustees will aim to make it the largest and most complete reference library in the country. Such a library, adapted to the higher wants of scholars, is greatly needed as a national as well as a local institution. The Astor Library, from its want of means, has not been able to supply this desideratum. Up to the time of the death of Mr. William B. Astor the library, in buildings, books, and invested funds, had only about \$750,000 expended upon it. The legacy of Mr. Astor added \$249,000 to its resources. The Newberry Library will start with at least double that sum; and if its organization be delayed, with a much larger foundation. A whole square, bounded by Rush, Ontario, Ohio, and Pine streets, the Newberry homestead before the great fire of 1871, is now vacant for the erection of the library building. The functions of a large reference library would not interfere with, but, on the other hand, would supplement, those of the Chicago Public Library supported by city taxation, which are mainly to supply the citizens with books for circulation. The Chicago Historical Society, which lost its building and collections in the great fire of 1871, has funds for rebuilding, and a field of usefulness independent of that of the Newberry Library. No one library, however large its resources, can meet the many-sided wants of a metropolitan community with a population of half a million.

Mr. Newberry, formerly a resident of Detroit, came to Chicago when the city had less than ten thousand inhabitants. He brought with him money which he judiciously invested in land, which has increased enormously in value, and much of it is still unimproved, though within the city limits. His business habits were singularly exact and methodical. He never contracted any debts nor allowed any incumbrance on his property. While he educated and supported his family in a style befitting his wealth, in his personal conduct he was saving and unostentatious. He made his investments and managed his business with constant reference to the theory of probabilities. To the attorney who drew his will, he stated the estimate he had made of the probability that one-half of his estate would go eventually to the foundation of a library. There were forty chances in a hundred, he said, of this event occurring. He had considered the health of his daughters, the probability of their marrying, having issue, etc. For several years before his death he was the president of the Chicago Historical Society, and he took considerable interest in the institution. It was an occasion of surprise to the members that the society received no legacy in his will. He died on the ocean while on a voyage to Europe.

## VI.—PUBLIC LIBRARIES OF CINCINNATI.

BY W. H. VENABLE.

Many of the original settlers of Cincinnati were persons of education and refinement. They had acquired mental habits, the exercise of which was necessary to their contentment. Hence, their intellectual enterprise kept a more even pace with their material prosperity than is usual in pioneer towns. Schools and churches were established as soon as was practicable. An association for literary and scientific improvement was organized at an early date, under the presidency of the accomplished Josiah Meigs. A newspaper, *The Western Spy*, was issued in Cincinnati, in 1799, and a few years later pamphlets and books began to appear from the local printing-offices, prognosticating that activity of the press which has since made the city famous for the magnitude of its publishing business.

It is not surprising that a community which fostered the school, the lyceum, and the press regarded reading as the foundation of culture, and considered the collection of books for popular use an essential part of public duty. To the founders of Cincinnati belongs the credit of having instituted the first public library within the Northwestern Territory.

### THE CINCINNATI LIBRARY

went into operation March 6, 1802, thirteen years after the town was begun, and two years before the formation of the famous "Ooon Skin" Library at Ames, Athens County, Ohio, for which priority of origin has been mistakenly claimed.

The Cincinnati Library grew out of a popular movement, which, according to the New England method, took direction through the free action of a citizens' meeting, held at Mr. Yeatman's tavern, the usual place of assembly for public transactions. This was in February, 1802. A committee, consisting of Jacob Burnet, Martin Baum, and Lewis Kerr, was appointed to draw up and circulate a paper soliciting subscriptions for the purpose of establishing a library. The original copy of this paper is now in the possession of Robert Clarke, esq., the well known publisher. The list of subscribers to the library fund comprised twenty-five names, representing thirty-four shares of stock valued at \$10 each, or a total of \$340—no inconsiderable sum to be raised in a frontier colony three-quarters of a century ago. It is interesting to note that the subscription list is headed by the name of the veteran Arthur St. Clair, first governor of the Northwestern Territory, and of Ohio.

The library went into operation, with Lewis Kerr as librarian, but of its subsequent history no records have been found. It probably merged into the

#### CINCINNATI CIRCULATING LIBRARY.

In the autumn of 1808, some of the leading citizens of Cincinnati petitioned the legislature of Ohio for a law to incorporate a public library. The petition was not granted at the time, but in 1811 it was revived, and, chiefly through the instrumentality of Judge Turner, a charter was obtained. A library society was organized, and, after much delay—occasioned, no doubt, by the breaking out of the war of 1812—a collection of about 300 volumes was ready for use, April 16, 1814. A purchase of 250 volumes more was made, at Philadelphia, in the summer of 1815, and also a purchase of 100 volumes, on credit, of the Miami University, at Oxford, Ohio, between which institution and Cincinnati a relation of mutual sympathy and interest was fostered for many years. Later in 1815, a member of the board of library trustees "visited the eastern cities," with discretionary power to buy books for the library, and procured about 400 volumes.

From a printed catalogue of the circulating library, dated 1816, we learn that it then contained nearly 1,400 volumes, at an estimated value of about \$3,000. It was kept in the old Cincinnati College building, then recently built, and known as Lancaster Seminary, from the fact that a large school on the Lancasterian method was opened there, (in 1815,) under the presidency of Jacob Burnet, author of *Notes on the Northwestern Territory*. The librarian's name was David Cathcart.

The library appears to have been selected with care by competent judges of books. It contained a pleasing variety of standard works, and was classified with exact system. The pride and glory of the trustees seem to have been a set of Rees's *Cyclopædia*. The rules and regulations of the library were very minute and stringent, indicating the high estimation in which the books were held. A deposit of \$5 was required of every shareholder "on receiving a volume of the *Cyclopædia*." Wil-

son's Ornithology and two or three other expensive works could "only be read or referred to in the library."

The moving spirit in the formation and management of the circulating library was the president of its board of trustees, Dr. Daniel Drake, a man who deserves to be remembered for his zeal, ability, and perseverance in useful enterprises of every kind, and especially those tending to promote knowledge among the people.

The history of the circulating library reflects quite vividly the kind and degree of culture possessed by the Queen City of the West in her ambitious youth. The kind was practical, the degree high enough to grasp the relations of reading with academic training, and to stimulate several original literary enterprises. The seminary, which grew up with the library and was nourished by it, was the first important school in the city. The men whose provincial enthusiasm over the possession of a few hundred books provokes a smile included in their number some authors not to be despised, even by the critics of to-day.

The circulating library existed still at College Building in 1826, when the number of its volumes had diminished to 1,300. Eventually, for some reason unknown to the writer, the books were boxed up and packed away in the cellar of a bookstore on Main street. Here they remained for several years, gathering dampness and mold, until Rev. James H. Perkins, a Unitarian clergyman and writer, who took great interest in the literary and historical progress of the West, assumed the responsibility of overhauling the boxes and bringing their neglected contents to the light. Many of the books were entirely ruined. The treasured volumes of Wilson's Ornithology fell to pieces of their own weight. Such of the books as were in tolerable condition were selected and placed upon the shelves of the library of the Ohio Mechanics' Institute, a harbor destined to receive the drifting remnant of several pioneer collections.

#### THE APPRENTICES' LIBRARY.

The third public library of Cincinnati was founded in February, 1821, ostensibly for the improvement of "minors brought up to laborious employment in the city," and therefore called The Apprentices' Library. The management of it was intrusted to a board of directors, appointed by the contributors to the library, or by the city Council in case the contributors failed to elect.

The library was deposited in the council chamber, and contained, according to a catalogue published in 1846, about 2,500 volumes. The character of this collection was severely useful. The catalogue impresses the reader with a conviction that the generous donors to the library freely gave from their private collections such books as they never could prevail upon themselves to read or their neighbors to borrow; for examples, *The Apprentice's Guide*, *The Ambitious Student*, *An Inquiry for Happiness*, *The Improvement of the Mind*, and *Practical Piety*. These delightful treatises, strange as it may appear, were not eagerly

devoured by the ungrateful "minors brought up to laborious employment," for whose edification they were provided. It, however, became the custom for apprentices to draw books from the library for their parents and friends, especially after some novels were added to the collection by a certain wicked librarian named Jones.

The Apprentices' Library contrasts sharply with the Circulating Library, as to origin, purpose, management, and almost everything else. Like many an other institution built up *for* rather than *by* its beneficiaries, it lacked vitality and never became popular. Its affairs were loosely administered, and, worst of all, its books were of little account. The collection was donated to the Mechanics' Institute shortly after that was organized, and some of the books are yet to be seen on the shelves of the Institute Library.

#### LIBRARY OF THE OHIO MECHANICS' INSTITUTE.

At the close of a course of lectures on natural philosophy, delivered in the autumn of 1828, by John D. Craig, then an old man and eminent as a teacher of science, the lecturer suggested the establishment of a mechanics' institute in Cincinnati, such organizations being already in successful operation in Boston, New York, Philadelphia, and Baltimore. Dr. Craig afterward prepared, upon popular invitation, an address on mechanics' institutes, which was read before a large audience and printed. This led to the establishment of the Ohio Mechanics' Institute, in February, 1829.

The general object of the institute being "to facilitate the diffusion of useful knowledge" among the people, various means of popular instruction were considered, and among them the formation of a library. In 1830 the basis of a library was laid by donations of miscellaneous volumes from Dr. Craig, John P. Foote, Prof. John Lock, J. L. Talbott, and a few others. Three years after this Prof. Calvin E. Stowe, then of Lane Seminary, Cincinnati, gave before the institute a lecture on the History of Letters. The Hon. James Hall also delivered an address on the importance of establishing a first class library in Cincinnati. The audience drawn by these lectures was neither large nor enthusiastic, but it contained the working few, the stanch vanguard of devoted men and women who labor and make much sacrifice for the higher interests of humanity.

The institute purchased the private library of Morgan Neville, esq., son of General Neville, of Revolutionary fame. Some volumes of the Neville collection yet remain, and they may be distinguished by a label on which are engraved the Neville arms and the motto *Nocturna versate manu, versate diurna.*"

The "Neville collection," together with the Apprentices' Library and what was left of the Circulating Library, furnished the heterogeneous and timeworn materials of which the foundation of the Institute Library

was made. The collection was placed in a building known as the Enon Baptist Church, on Walnut street. It was presently removed to the Cincinnati College, and again, in 1839, to the famous Bazaar built by Mrs. Frances Trollope during her residence in Cincinnati. About the year 1840 the library received large donations of valuable books from its friend and patron Rev. James H. Perkins. Some good books were given also by an organization known as The Lyceum, of which Salmon P. Chase was a prominent member.

From the Bazaar, or Trollope's Folly, as it was contemptuously called, the library was transferred to a room on Walnut street, thence to a room on Third street, and thence again, in 1848, to another room on Walnut street. About this time a lot was purchased on the corner of Sixth and Vine streets, and upon this the present Mechanics' Institute building was erected. Thus, after a nomadic existence of nearly twenty years, the library at last found permanent quarters. The record of its wanderings and vicissitudes helps us to realize how painfully slow is the growth of educational institutions in a new city.

In 1856 the Cincinnati school board leased rooms in the Mechanics' Institute building, and deposited the Public Library there. The Institute Library, comprising something less than 6,000 volumes, was placed in charge of the school board and became virtually a part of the Public Library. In the year 1870 the Public Library was removed to its new home on Vine street, and the Institute Library was left in its own apartment. Since that time it has not received any important additions, except a valuable instalment of publications by the Patent Office. The library is scarcely used at all by the public, and, in fact, it contains few, if any, books that are not to be found in better condition at other public libraries in the city. The Mechanics' Institute Library has outlived its usefulness as a means of diffusing general knowledge; but as a monument of past enterprise it is full of local interest, and as a quaint collection of odd, old books from different places and memorable individuals it is curious and historically precious.

#### THE YOUNG MEN'S MERCANTILE LIBRARY.

Some six years after the intelligent mechanics of Cincinnati set about organizing their noble institution for the intellectual elevation of the workingmen, the leading business men of the city undertook the establishment of an association which should contribute directly and specially to the culture and dignity of the mercantile class. The Young Men's Mercantile Library Association of Cincinnati was incorporated in 1836. It has been from the start one of the most efficient educational powers in the city. Its primary object, as the name implies, was the formation of a library. The system and success with which this object has been carried out, in the face of many discouragements, testify favorably to the business tact, as well as to the liberality, of the association. The writer of this sketch has been forcibly struck by the fact

that of all the Cincinnati libraries the Mercantile is the only one whose history is clearly and fully preserved. The reports and records of the association are definite, statistical, and satisfactory.

Immediately upon the organization of the association the sum of \$1,800 was raised by subscription, with part of which books were purchased, and the library went at once into operation. The library was first opened in Ames's building, Main street, but after several removals it found its way to the Cincinnati College—a receptacle ever hospitable to the agencies of culture, whether in the direction of science, literature, or art. This edifice, endeared to the city by many associations, was destroyed by fire on Sunday, January 19, 1845, but by the prompt exertions of citizens all the books of the library were saved uninjured. The present Cincinnati College was built in 1846, and in it the association secured on perpetual lease, free of rent, a fine suite of rooms embracing the entire second floor front.

The prospects of the library were now exceedingly good, and fine progress was made from year to year. In 1847 subscriptions were first made to foreign periodicals—English, German, and French. In 1849 a valuable importation of English books was received. The library in 1854 contained 15,000 volumes, and the reading room was supplied with 148 choice periodicals.

In the month of October, 1869, the College Building took fire, and was with difficulty saved from entire destruction. On this occasion a portion of the library was ruined by fire and water, but most of the books were preserved in good condition and removed to a suitable place until the injured building was repaired and renovated. A new catalogue, containing the titles of 30,000 volumes, was published a month after the disaster by fire.

The library was restored to its old rooms in College Building in 1870. Shortly after this the board of directors authorized the opening of the reading room on Sunday, an innovation that met with general approval. A radical change of policy was brought about in 1871, when a new constitution was adopted abolishing the exclusive mercantile feature of the association, and extending the privileges of membership to all classes. This gives the association a more metropolitan character, and greatly increases its usefulness as well as its popularity.

The Mercantile Library is conducted in a liberal spirit, and it meets the wants of many readers. Its rooms are always quiet, clean, and attractive, and therefore a favorite place of resort. Its shelves are well supplied with history and statistics, especially American. The collection of bound periodicals is excellent; and the files of early western newspapers are of great rarity. The main features of the library are its pleasant reading room and its department of prose fiction. While the other public libraries of the city have until recently almost repudiated fiction, this one has always promptly met the demand of the novel reading public. Three-fourths of its circulation is of standard fiction.

In the annual report for 1871 it is stated that twenty copies of Miss Alcott's *Little Women* and twelve copies of Mark Twain's *Innocents Abroad* did not half supply the demand for those pleasant books. The library now numbers about 36,000 volumes.

The formation and maintenance of a library have not been the only objects of the Mercantile Library Association. Literary exercises formed an important part of the programme of the association's meetings for a good many years. The experiment of conducting classes in mathematics and modern languages was tried with varying success until 1858, when it was discontinued. Efforts were made to establish a gallery of fine arts and a cabinet of natural history, under the auspices of the association. A collection of shells, fossils, and minerals was purchased of Prof. David Christy for \$4,000; but, this proving an incumbrance, it was consigned to Trübner & Co., London, with the expectation of its profitable sale; to the chagrin of the association, it actually brought only £36 17s.

The library rooms are adorned by a few works of fine art, among which are busts by Clevenger, Powers, and Canova.

The library association frequently renders itself and the city service by securing popular lecturers to appear in Cincinnati under its patronage.

A peculiar custom has long prevailed in the association that gives it a local importance not usual with organizations of the kind. The election of officers is held annually, and it is always an occasion of intense excitement, as there are invariably two rival tickets, known as the regular and the independent. Each ticket is supported with a partisan devotion amazing to strangers who happen in the city during the campaign. Each party has its headquarters fitted up with great elegance, its badge, its banner, and all the pomp and circumstance of glorious war. Ladies are now allowed to vote, having a voting precinct of their own, and tickets of the most elegant and dainty description. The effect of all this annual parade is to call universal attention to the association and to increase its membership and its money resources. The custom has become traditional, and its mock-earnest excitement is anticipated as part of the winter's amusement.

#### LIBRARY OF THE HISTORICAL AND PHILOSOPHICAL SOCIETY OF OHIO.

The Historical and Philosophical Society of Ohio was incorporated at Columbus, Ohio, February 11, 1831. Its meetings and elections were held annually during the sitting of the legislature, in the representatives' hall. Addresses were made, occasional papers on local history read, and a library was started. But the society never had any great vitality until after its removal to Cincinnati, which took place in 1849. The Cincinnati Historical Society, which had been in existence five years, and which was in a thriving condition, was merged in the Histor-

ical and Philosophical Society of Ohio, which thereupon took a new lease of life.

The society had its meetings and its library in a room of the Cincinnati College. Some time previous to the year 1855 the books of the New England Society were deposited with the Historical Society and became part of its library. The New England Society was organized for the purpose of "perpetuating the memory of early settlers of New England, extending charity to the needy of New England birth, and promoting virtue, knowledge, and all useful learning." It was chartered in 1845, on the application of Lyman Beecher, Salmon P. Chase, Timothy Walker, Bellamy Storer, Calvin E. Stowe, E. D. Mansfield, and others. The books received from this interesting society are valuable in themselves, and have an added value from the fame of their donors.

The Historical Society flourished for a time, and gave promise of healthy development. But it could not command the conditions of permanent prosperity. Having no rooms but those it rented, having no endowment, and having no income but the annual fees of members, the membership became so diminished that the rooms were given up, and the collection placed on deposit in the Public Library of the city. During the war most of the members were away from the city; some removed permanently. Meetings were no longer held; the society was entirely dormant.

In the spring of 1868 Robert Buchanan, who had been president up to the suspension of the active life of the society, Charles E. Cist, who had been recording secretary, and John D. Caldwell, librarian, resolved to attempt to resuscitate it. A meeting was called for reorganization 23d May, 1868. New members were elected and the reorganization completed on the 7th December, 1868.

An arrangement was made with the Cincinnati Literary Club for the joint use of their rooms. The library, or what remained of it, was moved from the Public Library to the club rooms. The collection at that time comprised 700 bound volumes and 1,250 pamphlets, exclusive of duplicates.

The membership increased, the library grew, and greater space became necessary. The trustees of the Cincinnati College, in the spring of 1871, gave the society the use, rent free, of five rooms in the upper story of the college building, and the society moved into these rooms on the 1st of April, 1871.

Mr. Julius Dexter, being elected librarian, resolved to arrange and catalogue the library, and gave up his time to the work. He began the task on the 1st of January, 1872, and has now substantially completed it. The 4,967 bound volumes and 15,856 pamphlets now catalogued comprise nearly all owned by the society, except the duplicates.

The library, which numbers between 5,000 and 6,000 bound volumes and about 17,000 pamphlets, has outgrown the space afforded by the rooms now occupied by the society, and is growing. A respectable

collection of relics and implements of the Indians and the mound builders has been gathered, and could be at once increased, if there were room.

The number of members has grown to 83. Meanwhile an endowment fund has been created, partly by investing all money received for life memberships, but mainly by contributions from the members. A building fund has likewise been raised and is increasing. The society may soon be able to procure a permanent home for the library, and thus establish itself on a secure and proper foundation.

The Historical Society is exceedingly fortunate in enjoying the gratuitous services of Mr. Julius Dexter, its librarian, whose public spirit, untiring industry, and continued liberality have done more than all other agencies to raise the library to its present state. This gentleman, in addition to his personal labors in building up the library, has donated more than \$5,000 to its financial support.

#### THE THEOLOGICAL AND RELIGIOUS LIBRARY OF CINCINNATI.

George E. Day, D. D., late president of Lane Seminary, now professor in Yale College, was the prime mover in the work of forming the Theological and Religious Library of Cincinnati. The association which organized this library was incorporated in March, 1863. The basis on which the library is founded is defined in the following extract from a paper prepared by Prof. Day :

The end contemplated in the establishment of the library is twofold, ultimate and proximate. The ultimate end to be kept steadily in view is the collecting of the entire theological and religious literature of the world, now estimated to amount to not less than 250,000 volumes. . . . The proximate or immediate end proposed is the careful selection and purchase of the very best books in every department of theology, metaphysics, ethics, and religion, including the ablest works on both sides of disputed questions, the most valuable portions of the current theological literature of the United States, Great Britain, and the Continent, and the most important quarterlies and other theological journals of the various denominations.

The statement of Prof. Day further announced that—

The religious basis upon which the whole enterprise rests is of the most comprehensive, liberal, and catholic character. It is absolutely and entirely undenominational. All persons, whatever their religious opinions may be, are invited to co-operate. Books and treatises explaining and defending the various forms of religious belief will be placed, without distinction, on the shelves. While the object of every individual should be to ascertain what is true, the object of a good library is to collect and furnish for use what exists.

The scheme met with the cordial indorsement of the public. Influential people of all denominations except the Catholics joined to put it in execution. Contributions of cash were freely given. A "founder's collection" of first rate books was donated. A reading room was opened with a periodical collection which has been considered the completest of its kind to be found in the world.

The library was first opened in a room on Fourth street, but it was presently transferred to the Mechanics' Institute building, where it at-

tained a popularity hardly to be expected. Its reading table was a principal attraction.

The Theological and Religious Library is now deposited in the Public Library building, in charge of the school board and as part of the Public Library. It contains about 4,000 bound volumes.

#### THE PUBLIC LIBRARY.

In the year 1853 the school law of the State of Ohio was remodeled, and provision was made for the establishment of school libraries at the public cost. A tax of one-tenth of a mill on the dollar valuation was levied, the proceeds to be intrusted to the State commissioner of common schools, to be expended in the purchase of books and apparatus to be distributed to all the school districts in the State.

H. H. Barney, who was commissioner at the time the new law went into effect, made his purchases so as to supply every district with the same books. To the auditor of Hamilton County were sent eighteen libraries precisely alike for the eighteen school districts of Cincinnati. The school board, upon the suggestion of its president, Rufus King, refused to receive so many libraries of one kind to be scattered in so many places; and on December 18, 1855, resolved that there should be but one school library in Cincinnati, and that should be kept in the building in which the sessions of the school officers were held. Upon this action the commissioner consented to give the school board the money value of the eighteen libraries, which were thereupon removed.

Mr. King, assisted by Mr. Barney, made a selection and purchase of 1,500 volumes, which, early in 1856, were placed in a room on the first floor of the old Central School House on Longworth street, the board having its session room up-stairs in the same building.

The library tax appropriated for the first three years from the passage of the new law amounted to almost \$11,000. Owing to the misuse of books and apparatus in some parts of the State, and to strong opposition excited in the book trade against the monopoly of a certain eastern publishing house, the tax was suspended (April, 1856,) for a year, and again in April, 1857, for another year. After this the tax was levied for two years, when, in 1860, the law was repealed.

During the years of change and uncertainty upon which the library entered at the very outset of its career, the friends of popular education, both in the school board and out of it, fought courageously for the library.

In May, 1856, John D. Caldwell was elected clerk of the school board and librarian. He proved an active officer. A circular was prepared and sent to leading citizens requesting them to furnish lists of books suitable to be purchased for the library. Among the twenty or thirty persons who responded was Archbishop Purcell, who sent in a list of sixteen foolscap pages. Donations of books were made in 1856 by the Young Men's Mercantile Library Association.

The library soon felt the urgent need of suitable rooms. A proposal to erect a third story on the building on Longworth street was considered and rejected. A project to build was dismissed as impossible from lack of means. Fruitless efforts were made to secure apartments for the school board and the Public Library in College Building. At length a proposition came from the directors of the Mechanics' Institute to the library committee of the school board, offering to lease rooms to the school board and to place the Institute Library under the same management as the Public Library. The terms of the offer seemed liberal and advantageous to the committee, and it at once agreed to accept them; but when the contract was submitted to the school board for ratification it was rejected. Dr. C. G. Comegys, chairman of the library committee, now set resolutely to work using every legitimate means in his power to change the disposition of the board and to secure a reversal of votes. He was successful; and on July 31, 1856, the contract was duly signed by the proper parties. "This action," says Thomas Vickers, in his address at the opening of the new library building February 25, 1874, "was really the crossing of the Rubicon for the Public Library; it gave it an importance which it probably would not have otherwise obtained; and those to whose untiring energy the action was due ought to be gratefully remembered to-day. It is a pleasing reflection that as a consequence of the occupancy of the Mechanics' Institute building, the cause of public education in this city received a new impulse. A night high school was established with eminent success in Greenwood Hall, and an art gallery, which under the fostering care of the then president of the school board (Mr. King) has grown into the McMicken School of Design, the art department of the Cincinnati University."

In October, 1857, the library committee, in their report to the school board, recommended the appointment of a librarian in chief at a salary not to exceed \$1,100. The board having given permission, Mr. N. Peabody Poor was elected librarian at a salary of \$800, with an assistant at \$300. In its report for 1857 we find the library committee lamenting the accession of novels from the transfer of the Institute Library. The circulation of novels for the preceding year had amounted to 8,229. "The excessive propensity thus manifested for such reading," says the report, "has given us much pain, and it will be our duty, by early and stringent measures, to put away from us all cause of reproach on the subject." Prompted by the sense of moral obligation implied by the above language, the committee resolved, October 2, 1857, that no novels should be given out to pupils of the high schools! The conflict of opinion with respect to novel reading is curious to observe. It has come up again and again in Cincinnati. The anti-fiction party appears to have held the balance of power in the library for several years. In 1869 we notice the librarian, Mr. Freeman, mildly urging the purchase of a few good novels; and in 1872 the librarian, Mr. Poole, devotes a

PUBLIC LIBRARY OF CINCINNATI.

considerable part of his report to the direct discussion of the subject of novel reading, affirming that no public library can enjoy popular sympathy and proscribe prose fiction.

In April, 1859, two concerts were given in Pike's Opera House for the benefit of the library, from which the sum of \$1,335 was realized. The greater part of this was used in fitting up the library with alcoves and gallery.

During the war the library languished. The reports of the librarian were meagre. The library fell into a state of disorder. Many of the books were defaced or worn out; many were lost or stolen. Early in 1866 Mr. Poor, the aged librarian, suddenly died. The board elected in his place Mr. Lewis Freeman.

At the close of the war there was a general awakening of literary and educational interests. To Cincinnati the period was one of transition from provincial to metropolitan conditions and methods. The city sprang forward and upward with a new impulse.

The library committee in 1866 issued a circular urging the public to subscribe a fund, the income of which should support the library. In response to the appeal, and through the vigorous efforts of Mr. Freeman, the librarian, about \$5,000 were raised. The fund was further increased by a bequest of \$5,000 from Mrs. Sarah Lewis. But it was painfully evident that the library could not depend for a sufficient income upon the liberality of a few individuals.

The chief hope of the library lay in the prospect of such legislation as would restore the old tax or its equivalent. Such legislation was eventually secured, largely through the influence of Rev. J. M. Walden. A law was passed March 18, 1867, by which the city is empowered to assess, additional to the usual educational tax, one-tenth of a mill on the dollar for the maintenance of a Public Library. This important legislation at once gave the library an independent income of over \$13,000. The library at once began a vigorous growth, which has not since been checked. In 1868 over 4,000 volumes were added to the collection, embracing the private library of W. T. Coggeshall, and a good collection of German books. The library, at this date, contained only 350 novels in all.

The report of the board of library managers to the board of education, dated June 28, 1869, records a movement which led to the results most desired. "On the 20th of July, 1868," says the report, "your board passed a resolution referring the subject of the location and erection of a building for the Public Library to a committee of your board, in connection with the board of managers of the Public Library."

The committee thereby constituted held their first meeting on the 17th day of August, 1868, and proceeded to examine the Handy Opera House property, which was about to be sold by public auction. It was decided to be very desirable property for a public library, and afterward it was purchased by the committee for the sum of \$83,000.

Plans for a library building were prepared by Mr. J. W. McLaughlin, architect, and the work of building was promptly begun.

Early in 1869 Mr. Freeman tendered his resignation as librarian, which was accepted, and Mr. W. F. Poole, of the Boston Athenæum, was elected to the position. Mr. Poole entered upon the discharge of his duties November 5, 1869. He set to work with great energy and enthusiasm to reorganize the whole library economy, and to prepare for the anticipated change and increase the sphere of library operations. A new catalogue was begun. The front part of the new library building being ready for occupancy, the books were removed from the Mechanics' Institute rooms during the autumn months of 1870, and the new apartments were opened to the public December 8, 1870. The whole number of volumes removed was 30,799, exclusive of the books of the Theological and Religious Library, (3,291 volumes,) which were also removed, to remain in charge of the Public Library. The Mechanics' Institute Library was left with the flourishing institution which created it.

In March, 1871, the school board opened the Public Library for Sunday use. The new catalogue, comprising 656 pages, was issued. A room for illustrated works was fitted up, and proved to be very attractive. Excellent progress was made during the years 1871, 1872, and 1873. The library increased rapidly, and its popularity was proportional to its growth. During the official year 1872-'73, the trustees of the Cincinnati Hospital deposited their medical library in the Public Library, but this has since been withdrawn.

Late in 1873, Mr. Poole resigned his position with the view of taking charge of the Chicago Public Library. His resignation was accepted, and the Rev. Thomas Vickers was elected in his stead, December 1, 1873. The main hall of the new library building being at length completed, appropriate dedicatory exercises took place February 25, 1874. The magnificent room was thrown open to the public, and addresses were made by Hon. George H. Pendleton and others. The library room now ready for the accumulating treasures of the reading public of Cincinnati, is one of the largest and finest single apartments of the kind in the world. It has a shelving capacity for 250,000 volumes.

On the 17th of March, 1874, Dr. W. H. Mussey placed in charge of the Public Library his private library of 3,513 volumes. The collection is practically a gift to the public. It is known as the Mussey Medical and Scientific Library, and occupies four alcoves in the main hall.

The Public Library contained in all about 70,000 volumes at the beginning of Mr. Vickers's administration. It seemed to the librarian imperative that, upon the removal of the books to the main hall, a reclassification and a new catalogue were imperatively demanded. So rapid had been the growth of the library, that the printed catalogue no longer contained the titles of half the books. Mr. Vickers suggested that the catalogue hereafter should consist of separate parts, "class catalogues, which can be sold at a merely nominal price to the persons

INTERIOR PUBLIC LIBRARY OF CINCINNATI.

interested in the various departments, and which can be reprinted at small cost whenever they are out of date by reason of large accessions." This plan has been adopted, and the first of the series of class catalogues, that comprising the titles of fiction, is now nearly ready for the press.

The labor of removing the books to the main library room was completed as rapidly as practicable, and all the apartments of the library building are now applied to their appropriate uses. The various reading rooms are in complete order, and the reference use of the library has become a leading feature. From the admirable report of the librarian to the board of managers for the official year ending June 30, 1875, we learn that the library circulated in that year 443,100 volumes. The whole number of book borrowers recorded for the year is 26,247, and the whole number of volumes issued for use in the reading room was 51,189.

It is a striking fact that the Sunday use of the library has steadily increased until it now averages a thousand readers a day. Says the librarian:

Certainly no one who will visit our various reading rooms on Sunday, and observe the large attendance of the young men of the city, the earnest and thoughtful attitude of by far the larger part of them, and the quiet and decorum which everywhere prevail, can fail to see that the library, with its Sunday reading, is exerting a powerful influence for good upon the morals of the community.

There is another very interesting fact brought to light by the tabular statements of the librarian's last report. It appears that during certain months in which the books of fiction were withdrawn from circulation for the purpose of cataloguing, the reading of history and biography increased 137 per cent., of geography, voyages, and travel, 191 per cent., and of science and the arts 89 per cent.! When the restriction on novels was withdrawn all the other classes of reading dropped to their usual level. From these data the librarian ably and convincingly argues for the restriction, not suppression, of the circulation of light literature. He says:

Much as I deplore the popular mania for the poorest and most ephemeral productions of that class, I cannot regard the reading of even these as an unmitigated evil. Much less do I in the least deny or doubt the informing and educating power of the higher class of modern novels, though it were certainly the height of un wisdom to seek one's information and education exclusively in them. What, however, does appear questionable is whether a library such as this ought to undertake to supply the popular demand for such literature to the fullest extent. It would seem that this library, intimately connected as it is with our public schools, being, in fact, a part of the general system of public instruction, should seek to exert a direct influence in the education of the people. Such restraint, therefore, on the novel reading propensity as comes from the refusal of the board to purchase any large number of duplicates of works of the poorer class, would seem in order and a duty.

This carefully expressed and certainly very reasonable language is of more than local applicability, and seems to us worthy of attention by all who have to do with the great trust of guiding popular taste and culture through the agency of libraries.

There is still another point in Mr. Vickers's report of such general importance that it may with propriety be quoted in a sketch designed for national circulation :

In the management of the great libraries of Germany there is one feature, which, with some modifications, might be successfully and profitably copied in America. Wherever the scholar may reside in Germany he has in a certain sense the whole literary wealth of the country at his command. On proper recommendation and security he can have sent to him, from any of the principal libraries, for a definite period, such works as he needs for the prosecution of his studies, his only expense being that of transportation. By means of another arrangement, a scholar residing in a place where there is an important library, can borrow books from libraries in other cities on the security of the one in his own. For instance, Professor A, residing in Dresden, needs a book which is not to be had there, but is in the Royal Library at Berlin, or in the Royal Library at Munich; the Royal Public Library at Dresden sends to Berlin or Munich for the book, becomes responsible for its safe return, and Professor A has the use of it on payment of the small sum which the carriage costs. I see no reason whatever why such an arrangement as this could not be made between the principal libraries of this country. It would assuredly be an invaluable assistance to scholars and students.

The annual income of the library now exceeds \$20,000, and is increasing.

#### OTHER LIBRARIES.

This sketch would fail to give a just account of the resources of Cincinnati in the way of books, if it did not mention several semi-public libraries accessible to the enterprising student.

Lane Seminary has a very interesting library, comprising many rare works. The collection has been growing for many years. It numbers 12,000 volumes.

The College of St. Xavier possesses an excellent library of about 14,000 volumes, kept in excellent order, in a very convenient room. The books are almost without exception works of permanent value. Of course many of them relate to the history and polity of the Catholic Church, and especially to the Society of Jesus. The students' society libraries of the college contain about 3,000 volumes.

Mt. St. Mary's Seminary of the West also has a library of 15,100 volumes and 4,000 pamphlets. There is an attractive printed catalogue of this collection, containing the titles of many good books and some poor ones. The best portions of the library are its ascetical and polemical works and its department of ancient classics.

The Cincinnati Law Library is deserving of more than passing mention. It is considered by competent judges to be one of the best of its kind. It numbers about 6,400 volumes.

The Ohio Medical College has a collection of 5,000 volumes.

The Cincinnati Hospital has a collection of 2,119 valuable medical works.

A list is appended of other libraries, numbering each 1,000 volumes or more.

|  | Volumes. |
|--|----------|
| Catholic Institute.....                | 3,000    |
| Queen City Business College.....       | 1,000    |
| House of Refuge.....                   | 1,000    |
| Hughes High School.....                | 1,200    |
| Mendenhall's Circulating Library.....  | 6,000    |
| New Church Library.....                | 1,100    |
| Turners' Library.....                  | 3,310    |
| Young Men's Christian Association..... | 1,200    |

## CONCLUSION.

The chief interest of the foregoing sketch is necessarily local, though many of the facts have a general and representative value that justifies their insertion. Any phase of the history of any city throws some light upon municipal progress everywhere. Authentic facts, however few or trivial, make up the aggregate of useful details out of which true generalizations arise.

It is worth while to remark, that a great deal of earnest effort has been misdirected, thrown away, and lost, in Cincinnati from lack of systematic co-operation on the part of those who engaged, from time to time, in establishing libraries and other institutions. The fruits of their labor are not so abundant as they might have been had they combined their resources.

Our review illustrates one encouraging truth, namely, that good enterprises are not always dead when they appear to be so. It takes time to realize great improvements. The present splendid Public Library of Cincinnati may be not unreasonably regarded as the outgrowth of seeds planted as long ago as 1802. The spirit that inspired the founders of the old Cincinnati Library three-quarters of a century ago also animates the men who fostered and still foster the intellectual interests of the city to-day.

The libraries of Cincinnati, as of other towns and cities, have ever been the conservators of popular intelligence. Whenever and wherever a collection of books has been formed, then and there other agencies of knowledge and thought cluster together. Books are the nucleus about which culture crystallizes, like a gem of many facets. They are at the centre of literature, science, and art. They illuminate education, religion, and life. They are the stimulus of students, the strength of scholars, and the delight of men of taste. To the pupil in school they are only less valuable than the excellent teacher, and often more valuable than even he. The sage of Concord has said that to the modern learner the great library is equivalent to a university. There is no danger, however, that the library will supersede the school, for these two agencies of human amelioration rise together, complement each other, and are both exponents of the highest civilization.

## VII.—PUBLIC LIBRARIES OF NEW YORK CITY.

BY O. C. GARDINER.

## LIBRARY OF THE CITY RECORDS.

This library, the date of origin of which cannot be definitely fixed, began by the preservation and accumulation of the various manuscript records pertaining to land titles and the administration of municipal affairs, like similar collections elsewhere. It was probably first called a library soon after the practice of printing the various records and reports of the municipality was begun. It is deposited in the city hall, and now contains about 4,000 volumes, besides 10,000 duplicates. It embraces, besides the collection of printed volumes relating to the various departments of the city government, more than a hundred volumes of manuscript records, and the original papers on which these records are founded. The manuscripts and papers fill four large iron safes.

The manuscript records extend over a period of nearly two centuries, from 1647 to 1830, and the printed records over a period of nearly half a century since.

These manuscript records were chiefly in Dutch from 1647 to 1674, (the final cession to the English,) and are contained in six volumes, and the English records before and after the Revolution in about 70 volumes. The latter come down to 1830, since which all records, except those of 1871, have been printed. They were suspended, from June 27, 1774, to February 10, 1784. From August, 1776, to November, 1783, during its occupation by English troops, the city was under martial law.

In the 4,000 printed volumes are embraced the directories of the city, from 1786 to 1876; proceedings of the boards of aldermen and assistant aldermen from 1831, inclusive, till the board of assistants was abolished by the late charter; the reports of the treasurers and controllers from 1790 to 1867; the Annals of Congress from 1793 to 1809; 17 volumes of American State Papers, and the National Archives of 1776; Historical Collections of Louisiana, from 1678 to 1691; reports on Central Park; the Montgomerie charter, and the charters and amendments to charters since the Revolution; the charters and early ordinances of forty-five cities of the United States, including the principal cities of New York State, and Boston, Philadelphia, Baltimore, and Washington; sanitary reports, nearly complete; reports, manuals, and directories of the board of education; records of board of supervisors, from 1809 to 1875, except 1870–1871; Manuals of the Corporation from 1841 to 1870, except 1867; Niles's Register, 1811 to 1849; the City Record since begun, 1873 to 1876; reports of the Croton aqueduct and of the fire department since its organization as a paid service and its union with the fire telegraph alarm.

It embraces also a large collection of French documents and British

sanitary reports; Audubon's works, in 9 volumes; Tallack's prison systems of Great Britain and the United States; memoirs of James Duane, and many others.

#### NEW YORK SOCIETY LIBRARY.

This was probably the earliest loan library in America. In early records and histories of the city it was referred to and known as the "City" or "Public Library" in the City Hall.

The later catalogues of the Society Library, and many careful students of the history of the city, among them the accomplished and venerable president of the library, Hon. Frederic De Peyster, date its foundation in 1700 under Bellomont, governor of the province.

At the centennial of the charter of the library, in November, 1872, Mr. De Peyster made, in substance, the following brief statement: Under English rule, after the revolution of 1688, King William took particular interest in the improvement of New York. He naturally regarded it with special solicitude, as the settlement had sprung from his native country. The Earl of Bellomont was a diligent promoter of his views. A well devised system of education required a public library as its support, and such an institution was established in this city in 1700. It was the immediate predecessor of the chartered New York Society Library of to day. The library has in its collection a number of volumes presented to it in the early years of the eighteenth century—from 1702 onward—the gift of Rev. John Sharp, an English chaplain at the fort in this city. He was for some time a missionary for The Venerable Society for the Propagation of the Gospel in Foreign Parts, and in this capacity, in 1710 addressed a letter from New York to its secretary in London, stating the fact that "provincial and parochial libraries" were already in existence in the metropolis of the several provinces of Maryland, Pennsylvania, New York, and Boston, and that many collections of good books had been sent over. In recognizing a provincial or public library in operation in New York, he confirms the statement of the historian, Oldmixon, that such a library had been founded in this city in 1700. The evidence of this early date of 1700 is presumptive rather than a matter of record in the city or provincial minutes of the time. The history of the labors of Rev. Thomas Bray, D. D., to whom the Society for the Propagation of the Gospel in Foreign Parts owes its origin, affords the strongest corroborative testimony. About the year 1697, he proposed a plan for loan parochial libraries in every deanery in England and Wales. He published two volumes on a plan of libraries and a scheme of studies for the clergy. He was reputed a man of great insight, energy, and prudence, and was selected by Dr. Compton, the bishop of London, for the double office of bishop and commissary of the English churches in the Maryland Province of America. Having spent three years in selecting missionaries and parochial libraries, he sailed for America, arriving in March, 1700. He returned to London in 1701

to secure from King William a royal charter for the Society for the Propagation of the Gospel, and other immunities for the churches in the Province of America. Not only Maryland, but the vestries of Boston, Rhode Island, New York, Pennsylvania, and Bermuda, returned thanks for the libraries he had forwarded. These were, most probably, parochial. The records of Trinity Church, which was burned in the great fire of 1776, show its parochial library to have been valued by a committee of the vestry, in making up the total loss, at £200.

In 1730, Rev. Dr. Millington, of Newington, England, at his death bequeathed his library to the Society for the Propagation of the Gospel. They decided to place it in New York City, as the most central point, for the benefit of the colonies in America; and, at a meeting of the common council of the city, held June 27, 1729, the mayor notified "this court" that he had been served with a message from the speaker of the general assembly, at the request of his excellency the governor, covering a letter from David Humphrey, secretary in London of the Society for the Propagation of the Gospel, that Dr. Millington had bequeathed to them a valuable library, and that, desiring to place it where it should be most useful abroad, they had agreed "to fix it in the city of New York;" but it being their intention it should be established a library from which the clergy and the gentlemen of the governments of New York, New Jersey, Pennsylvania, and Connecticut might borrow books to read, upon giving security to return them within a limited time, they desired that "a proper method should be taken for the preservation of the books;" that the assembly would provide a room for them, and pass an act for their preservation and all others which should be added to them. The conditions were accepted, and in the following spring the library, which contained 1,642 volumes, was received and placed in the City Hall.

The city records do not, at that date, show the appointment of a "library keeper," (this was then the name.) But this is probable, for it appears from a record of fifteen years' later date (April 19, 1745) that the library not having proper care, James Parker, who was then printer to the government, and had succeeded William Bradford in the New York Gazette, proposed to the mayor and common council to become "library keeper" on the following terms: Would make perfect copy of all the books, print catalogue, and at the foot of one give his receipt for the books; would charge six pence a week per volume, require double security, lend no book for less than a week nor longer than a month; members and officers of common council to receive books gratis, but give same security; would give his attention two hours once a week, and repair all books at his own expense. This was agreed to, and the arrangement probably continued for several years.

In 1754 a movement was begun which resulted in the formation of the Society Library in the same year. The original subscription roll, which comprised 140 names, began:

Whereas: a public library would be very useful to the city, and may be advantageous to our intended college, we subscribe £5 each, New York currency, and 10 shillings yearly.

It continued with brief rules and regulations, and a provision to appoint a library keeper, and to allow him a proper salary for attendance. At a meeting May 2, 1754, the following gentlemen were elected trustees: Hon. James De Lancey, Joseph Murray, John Chambers, Henry Barclay, William Walton, John Watts, James Alexander, Benjamin Nicolls, William Livingston, Robert R. Livingston, William Alexander, and William P. Smith. At a meeting May 7, it was voted that every member bring in a list of such books as he might judge most proper for the first purchase. At a meeting May 16, five such lists were produced, and from these a list was selected and sent to London to be filled so far as the money collected, about £750 New York currency, would allow.

The books selected formed a fair collection of the English standard literature of the time, in its several departments.

At a meeting of the trustees on the 11th September, 1754, pending the arrival of these books, the following resolutions were adopted, showing that this library was placed in the library room of the City Hall, and thus merged with the public library of Dr. Millington:

Whereas, the Corporation Library hath for some years past been shut up, and the books become of little or no advantage to the public, that the same may be improved,

*Resolved*, That the following proposals be made to the corporation: 1st, that the room in the City Hall in which the Corporation Library is now kept be appropriated to the trustees of this library; 2d, that such and so many of the books belonging to the Corporation Library as shall be deemed by us most fit for the use of the New York Society Library may be joined to the same, and placed under the care of us and our successors, we and they being accountable to the corporation whenever demanded; 3d, that any books not suited to our use may be boxed up and secured; 4th, that some person be appointed by the corporation to act with persons appointed by us to inspect and take account of the books, for which we will be accountable when delivered to our management.

John Watts, William Livingston, and William P. Smith were appointed to carry these resolutions into effect.

These minutes also show that invoices of books, larger or smaller, were added to the library in 1755, 1756, 1758, 1761, 1763, and 1765.

Among the records now in the archives of the library are two small catalogues, with the imprint of "Hugh Gain, Hanover Square, at the sign of the Bible and Crown," with no printed but the written dates 1758 and 1761. These dates are verified by accounts showing that he was paid for catalogues June 6, 1758, and again September 2, 1761.

At a meeting of trustees December 4, 1771, Samuel Jones, treasurer presented the draft of a charter which was amended, adopted, and forwarded to Governor William Tryon for the approval of the Crown. This was witnessed as the royal charter of His Majesty George III, November 9, 1772, with the seal and signature of Tryon. A new impetus was thus given, and the public interest in the library increased till the portending events of 1773 and 1774 seem to have prevented any

further additions of books, or any record of meetings in 1774. The accounts in brief extend to 1774, showing that it was still in use. This was probably not long continued, for the city corporation records on the same floor in the adjoining council chamber were suspended June 27, 1774.

The catalogue of 1761 contained the names of 120 subscribers, and about 1,300 to 1,500 volumes, exclusive of the Millington collection; so that, with additions from 1761 to 1772, the library must have contained 3,500 to 4,000 volumes in 1776.

After a suspension of fourteen years, the library resumed active operations in 1788, when twelve trustees were elected. The library was largely depleted during the Revolution, and many of the books were removed for safe keeping.

When the City Hall was enlarged and improved, for the first session of Congress under the Constitution, March 4, 1789, the entire second story was required; and at a common council January 7, 1789, it was resolved that the board has no objection to the appropriation of the uppermost room in the southeast part of the City Hall for the use of the Society Library.

From 1788 onward, the society enjoyed a new career of prosperity. The first catalogue after the war, published in 1793, contained the titles of 5,000 volumes, and in it were found many of the valuable works gathered in its infancy.

The growing importance of the library in 1793 required larger accommodations. A subscription was begun, a site purchased opposite the Old Dutch Church next to the corner of Liberty, in Nassau street, and an edifice for its special use—one of the most imposing of that day—completed in 1795.

In 1800 a supplement to the catalogue of 1793 made the aggregate at that date 6,500 volumes.

The increased value of property in Nassau street led to the sale of the library edifice and the search for a less costly site farther up town, in 1836. In the mean time the library was removed to Chambers street, near and east of Centre. It remained here four years. During this time a collection of books and magazines in Pine street, called the Athenæum Library, was merged in the society. It contained 3,000 or 3,500 volumes, about one-half magazines. A new and more spacious building was completed in 1840 on the corner of Broadway and Leonard street, into which its books were removed. It was at this period the most sought and most valued collection among the popular libraries of the country.

In 1853, the property on Broadway was sold and the library removed to the Bible House, where it remained until the completion, in 1856, of the present building on University Place near Twelfth street.

The library, built at a cost of \$80,000, is a plain, solid two-story brown-stone building 40 by 70 feet, with high ceilings, and arranged

with special reference to light and thorough ventilation. It contains a large reading room for gentlemen, a smaller one for ladies, and two commodious offices on the street floor. The second story is arranged with alcoves on either side the entire depth of the building, and a second series above with galleries in front extending the entire circuit.

At the date of removal from the City Hall, 1795, it had 900 subscribers; on removal to its present edifice in 1856-'57, it had 1,100, and this number has continued with slight variations.

In 1800, the library contained 6,500 volumes; in 1813, 13,000 volumes; in 1825, 16,000 volumes; in 1828, 25,000; in 1853, 40,000; and now in 1876 about 65,000 volumes.

The second catalogue after the Revolution was issued in 1813, with supplement in 1825; in 1838 a second catalogue was issued, with both an alphabetical and analytical arrangement of titles. Supplements followed on the same plan in 1841 and 1843. A third was prepared on the plan of that in 1838, with great care, in 1850. These were all the work of Mr. Philip J. Forbes.

During its history of almost a century and a half this library has been the recipient of many important gifts in books. Besides the Dr. Millington library, it received, in 1812, a most valuable collection of 275 volumes on American history from heirs of John Winthrop the younger, first governor of Connecticut. A more recent and rare gift was from Robert Lenox Kennedy — the Hammond Circulating Library of Newport, R. I., containing about 2,500 volumes. These comprise choice works of fiction and light literature. Many of the books are out of print and are not to be found in modern or antiquarian bookstores of the present time; hence rarer and more valuable as examples of the novels of the last century.

From its inception down through its long period of existence, the Society Library has been pre-eminently the library of the old Knickerbocker families of New York and their descendants. It has many valuable newspaper files, from 1726, the Gazette of William Bradford and the Mercury of Hugh Gain, down to 1830. It had in many of its earlier invoices, selected by the Alexanders, the Livingstons, and Smiths, rare editions of history, biography, and literature, which have been preserved through all its reverses, and have come down to this generation.

#### NEW YORK HOSPITAL LIBRARY.

The New York Hospital was founded in 1770, one of the most exciting periods of our provincial history. The library was established as a much needed auxiliary in 1796.

In that year the governors appropriated \$500 to the purchase of volumes; the medical faculty of Columbia College contributed from their private collections, and these and this purchase formed the nucleus of the Hospital Library. It was augmented by the purchase of the library of Dr. Romaine, in 1800, and still further by the collection of the private association of physicians, called The Medical Society of New

York. Among the additions made from time to time, during a period of twenty-five years, was the botanical library of Dr. Hosack.

It has published in all four general catalogues and four supplements. The first catalogue in 1804 enumerated less than 1,000 volumes; the second, in 1818, about 2,000 volumes; in 1845, 5,000 volumes, and in thirty years since it has added 5,000 more, works of far greater value than those first collected. Of the 10,000 volumes contained in the library, 5,000 embrace standard treatises by eminent authors. The various foreign and American standard medical periodicals which the library has received for over fifty years, comprise 3,000 volumes more. The remaining 2,000 volumes contain a valuable collection of botanical works, many learned monographs, and miscellaneous works in biography and the collateral sciences. It is altogether the largest and most valuable medical library in the city of New York, and one of the most valuable of its size in the country. It contains a valuable collection of illustrated works, as Bourguery and Jacob's *Anatomy*, 8 volumes; Hebra and Elfinger's atlas, 8 numbers, on skin diseases; Cruveilhier's *Pathological Anatomy*, 2 volumes; Auvert's *Surgical Practice*, 2 volumes, folio.

It embraces all the standard works on general and special diseases. Its collection on the theory and practice of medicine is very full, as also that on surgery and anatomy. As it is a library for consultation and reference, great care has been exercised in the selection. Dr. Vandervoort, who was regularly educated, graduated, and in the practice of medicine for over forty years, has acted as librarian for thirty-four years; and upon him has devolved the duty of selecting the books. Special regard is had for works which record any advance in the science or the practice of medicine.

From \$1,500 to \$2,000 per annum are now appropriated to the increase of the library.

#### LIBRARY OF THE NEW YORK HISTORICAL SOCIETY.

The New York Historical Society was organized in 1804. In January, 1805, the first regular meeting was held, and the following officers elected:

Egbert Benson, esq., president; Right Rev. Bishop Moore, first vice-president; Brockholst Livingston, second vice-president; Rev. Samuel Miller, D. D., corresponding secretary; Mr. John Pintard, recording secretary; Charles Wilkes, esq., treasurer, and Mr. John Forbes, librarian. A standing committee was appointed to issue an address to the public setting forth the objects of the society and to take such measures as would best promote its growth and progress. The constitution and by-laws were extensively circulated in pamphlet form and afterward inserted in the first volume of Collections.

The founders were men of eminent position as divines, statesmen, and jurists, or as men of literary culture or scientific attainment. Mr.

Pintard, already in possession of a valuable collection of books relating to American history, offered it at a reduced price. This the standing committee was authorized to purchase, and it became the nucleus of the library. Liberal donations of books, pamphlets, manuscripts, maps, and other material followed, which with purchases soon formed a respectable library in the department of American history.

In 1809, through the efforts of De Witt Clinton, then a member of the State senate, a charter was obtained and the society placed upon a solid foundation.

September 4, 1809, completed the second century since Hudson's discovery and passage up the North River, which received his name. The society commemorated the event by an oration from Rev. Samuel Miller, author of *A Hundred Years' Retrospect in America*, and by a grand dinner at the City Hotel. This celebration led to a series of publications, and Dr. Miller's paper, Verrazzano's discoveries in 1524, Hudson's four voyages, and the laws of the Duke of York's government over the colony, formed the first volume.

The society having removed thither from the old City Hall in 1809, remained in the government house about six years. During this period Dr. John W. Francis became librarian. His enthusiasm and brilliant intellect did much for its progress.

The plan of the society originally included natural history, and important collections had been made, but these were transferred to the Lyceum of Natural History as better suited to its objects.

During Dr. Francis's service the Gates, Schuyler, and Colden Papers were added. The first two as leading generals of the Revolution, the latter sharing equal civic responsibilities, gave special historical value to these additions. To its art collection were also added by the relict of the late Gouverneur Morris, portraits of Columbus, Americus Vesputius, Cortez, and Magellan, copies from the Florence gallery.

In 1816 the society removed to spacious rooms gratuitously provided by the corporation in the New York Institution in the rear of the City Hall, in the park. It continued in these rooms sixteen years, down to 1832. During the greater part of this period the society struggled with special pecuniary embarrassments. But the liberal advances made to it by Dr. John W. Francis and his indefatigable exertions to maintain its credit, saved it from sacrifices which would otherwise have retarded its progress for many years. At the point of greatest embarrassment Hon. Frederic De Peyster repaired to Albany, and by the aid of De Witt Clinton, in the session of 1827, obtained a grant of \$5,000. This, added to a sum raised by the special efforts of the society, relieved it of debt.

In 1850 a movement was begun to secure a site and to erect a building for the sole and permanent use of the library. This was completed and occupied in 1857 on the corner of Tenth street and Second avenue. The site is 50 by 100 feet. The building is of brick, 50 by about 95 feet, and is three stories high. The street floor contains the lecture room

and trustees' office, and into the upper stories are crowded its large collections of books, pamphlets, and manuscripts, and its extensive collections of paintings and sculpture.

At the organization of the society in 1804, it issued an address to the public, requesting donations and information under fourteen different heads, chiefly covered by books, pamphlets, and manuscripts. Appended to the address were twenty-five queries asking special and minute information upon as many topics connected with the discoveries, colonization, and foundation of the government, extending back nearly three centuries.

In 1814 De Witt Clinton drafted an able memorial to the legislature, setting forth the objects of the society. It was to establish a collection of the natural, civil, literary, and ecclesiastical history of America, and particularly of this State. He divided the civil history into the period of the aborigines, the half century under the Dutch, the one hundred and twelve years under England, and our political existence since. The society had already collected books, pamphlets, maps, and manuscripts to form the great outline of this history, but the hand of time was rapidly obliterating much valuable historical material which might now be obtained, but which the lapse of a few years would put beyond the reach of human power. As an instance, the records of the Indian commission, in four folio volumes, from 1675 to 1758, were conveyed away by Sir William Johnson on the outbreak of the Revolution.

The result of this appeal was a grant of \$12,000 by the legislature, and an order to send regularly to the society the laws and journals of the State. Congress also provided for the donation of its journals, laws, and documents. The collections thus far had been the fruit of private munificence, chiefly at the hands of its founders and the booksellers of the city.

The first catalogue was issued in 1813, prepared with special care and ability by the Rev. Timothy Alden, under an alphabetical arrangement by authors, names of documents, maps, and newspapers. It comprised 130 pages closely printed in small type.

These volumes were to a large extent miscellaneous, but the greater part illustrating the history of the country during the preceding century and a half. They included the annals of discovery, and early colonial settlement of New York and adjoining States, and more fully the principles and history of the foundation of the Government. A large number of these volumes were issues of the London press from 1755 down to 1810. Of twelve titles under America, nine were issued in London. The colonial period gave rise to several works on the rivalry between France and Great Britain as to territorial rights and trade in America. Spanish Settlements in America, History of the British in North America, (14 volumes,) European Settlements in North America, (Edmund Burke,) and speeches in the House of Commons in favor of America, (Burke,) are specimens of many of the early volumes. Nine

volumes under New Jersey, related to the government of the province in 1732, and down to 1800. Of sixty-five titles under New York, the majority relate to the city government, and the laws of the province or State, from 1691 to 1813. It contained a vast amount of historical data relating to the whole territory of what are now the New England and Middle States, in the form of special sermons, anniversary discourses, speeches of the fathers of the Republic, and retrospects of the previous century. As these materials lay scattered, but near to the period of the important events narrated, and with the previous events of colonization and discovery still fresh in the memory of those who wrote and spoke, this catalogue shows in every page how earnestly and carefully the sagacious founders gathered up and preserved these records from the ravages of time.

It contained lists of newspapers, as far as they could be collected, from William Bradford's New York Gazette—the first paper established in New York, 1725—down to 1813. The changes and casualties in business made it impossible to collect perfect files. Of ninety different files none is found complete; but the dates so lap one upon another as to give a fair portraiture of the period over which they extend. One hundred and twenty five maps, charts, and surveys formed part of the collection. The most important, a French atlas in two volumes, with charts of voyages and discoveries from 1246 to 1696; and maps of New York, New Jersey, and other territory, the gift of the heirs of Lord Stirling. Its art collection contained about thirty portraits of the patriots and early discoverers. Fifty manuscripts and one hundred and thirty almanacs, from 1692 to 1812, had been added.

The publications of the society (begun in 1809) have, in three series, reached 23 volumes. The first, in 6 volumes, contain many important historical discourses, by De Witt Clinton, Morris, Wheaton, Verplanck, Pintard, and Drs. Mitchell and Hosack, and the continuation of Smith's History of New York. The second, in 11 volumes, besides the discourses of Kent, Benson, and a long list of eminent scholars down to 1849, embraced the minutes of the society for seven years. The 6 volumes in the third, under the publication fund, continue Colden's Critical Correspondence upon Smith's History, and 3 volumes of the letters of Maj. Gen. Charles Lee, the second in command in the revolutionary army, dating from 1754 down to 1782. The entire series embraced also some of the most important records of discovery.

The second catalogue, issued in 1859, contains 653 octavo pages. This, with an art catalogue of 175 pages in 1874, shows the great value of the collection and the large proportions it has attained. They show the rich treasures in our history, in its rapid growth in civil, literary, and ecclesiastical affairs. Its 60,000 volumes and more than 12,000 pamphlets, however miscellaneous, shed light upon almost every subject which can come within the province of the student of American history.

The original manuscript collections, now in process of arrangement in chronological order, throw new light on many critical periods. They include the Colden Papers, from 1720 to 1776; the Lord Stirling Papers, embracing all his letters to Washington, and before, from 1756 to 1783; the Duer, Steuben, and Gates Papers, the last second only to those of Washington as materials for the history of the time.

Its collection of newspapers from 1704 to the present time, although the files are not complete, in their extent and variety, form a complete picture of the life and manners of this period. About one-half are bound and when completed will make 4,500 volumes.

The works of art probably exceed in value those of any other library in the country.

#### MERCANTILE LIBRARY.

The first movement in behalf of a mercantile library was made by a number of public spirited merchants and other active business men late in the year 1820. Their efforts met with such success that in February, 1821, the association numbered 175 active members and opened its library with about 700 volumes, which increased to 1,000 within the year; and John Thompson, the first librarian, was employed at a salary of \$150 per annum. In these early years of its history it was open only in the evening, and two directors were always in attendance. All the leading publishers of the city generously agreed to present copies of every work of merit they should issue.

In 1823 it was incorporated as the Mercantile Library Association, under the general law of 1796. In the same year it received from the Chamber of Commerce a gift of \$250, and a committee of that body was appointed to report annually upon its condition. The library had grown in 1826 to 2,200 volumes, and the membership to 438. Such was its prosperity, and so well had it fulfilled the hopes of its friends, that, at the end of two years, February 22, 1828, a meeting of prominent merchants was called, at which it was agreed to raise funds for a permanent library building. About \$40,000 were subscribed, and a building at once begun at the southwest corner of Nassau and Beekman streets. As a means of greater protection to the library, the subscribers to this fund formed a separate association, and obtained from the legislature a charter under the title of The Clinton Hall Association of the City of New York, for the cultivation and promotion of literature, science, and art. This corporation was distinct from the Mercantile Library Association, but identical in purpose and object. It went into operation February 23, 1830. The object of the incorporators was to hold in trust and manage all the property, real and personal, which the association might accumulate for the benefit of the library for all time, while the officers of the library should manage their own affairs, monetary and administrative, as a distinct organization.

The first book presented to the library was a History of England, the gift of De Witt Clinton, late the governor of the State, and, in memory

and honor of this eminent statesman; the building was named Clinton Hall.

A covenant was made between the two associations, by which the library should always occupy its rooms free of rent, and, after paying the ordinary expenses and laying aside a contingent fund of \$5,000 per annum from rents and income of Clinton Hall, the surplus should be invested in books for the library. It was further covenanted that the library should always be equally free to the members of both associations. Under this liberal covenant the Mercantile Library Association took possession of its rooms in Clinton Hall November 2, 1830, with 6,000 volumes and a membership of 1,200. During this year Columbia College granted perpetually to the library association two free scholarships. A like gratuity was awarded to the association by the University of the City of New York in 1845, and several of the scholars of these foundations have been graduated with special honors.

The library entered upon its second decade with marked prosperity. During this period courses of lectures, which had been established, were prosperous. Classes were also formed for the study of the French, German, and Spanish languages, chemistry, drawing, and penmanship. Under the supervision of able professors these were largely beneficial to the members. Its members and volumes steadily increased, so that in 1840 the association numbered 3,652 active members, 278 stockholders in Clinton Hall, and the library 21,906 volumes.

The third decade, from 1840 to 1850, was not distinguished by any event of peculiar interest. The membership varied, but the library steadily increased in the number and in the value and character of its volumes. At the close of this period the public interest in the library and the general belief in the power of the institution to elevate and give a higher tone to the character of the future merchants of the city had been greatly strengthened. At or about this period there began an increased demand for a better class of books. It often exceeded the supply. Thirteen copies of Macaulay's *History of England*, nine of Layard's *Nineveh*, six each of Lynch's *Expedition* and Hawks's *Monuments of Egypt* did not supply a sixth of the demand. By this alliance and co-operation of the Clinton Hall Association with the library, the selection of its higher permanent class of books was perpetually delegated to a committee of older men. Their selections greatly enriched the library. They aimed in their choice to combine solid instruction with entertainment. Out of 2,500 volumes added in 1849, over 2,000 were works of general literature, science, and art. Among these were the Sydenham and Ray Society publications, *Philosophical Transactions*, (in all, 55 volumes,) Burnet's *Rembrandt* and his works, and *Landscape painting in oil colors*, Pickering's *Races of Men*, and other similar works.

In entering on its fourth period, in 1850, it had about 3,500 members, and 33,539 volumes. The reading room was now receiving special attention, and had on its tables 131 daily, weekly, monthly, and quarterly journals, American and foreign.

The fourth period, from 1850 to 1860, began a new era in the history of the library. In the first year its circulation reached 100,000 volumes. The library had been entirely re-arranged in alphabetical order. Other important events in the history of the library followed. Clinton Hall was sold to the Nassau Bank for \$100,000; its charter was amended to give it power to increase its capital. The Astor Place Opera House was purchased and remodeled for the use of the library at a cost of \$250,000. So strong and deep was the interest of the mercantile community, that a subscription was raised sufficient to reduce the entire debt to \$75,000. The result of this change was a large increase of members. Among those who ten and fifteen years before had been its young and active members, were now found the enterprising and successful merchants of the day. The annual report of Clinton Hall for 1856, setting forth the cost of this transfer and describing the advantages of the new and spacious edifice, was made by the president, Wilson G. Hunt, esq., who for a period of twenty years had been one of its most active, able, and faithful directors, and has so continued to the present day. Such were the interest and the prosperity of the preceding sixteen months, that 308,254 times had its members shared in its benefits, making a daily average of 750 members who had received books or visited the reading room; 22,164 young men had been identified as members during the thirty-five years of its history; its library now contained 55,000 volumes, and the total library receipts up to this period were \$173,000. There were now 6,064 active and subscribing members, and this period left a more decided way-mark in the progress of the library than any of the years preceding or ensuing down to the close of our civil war. The year 1857 was one of financial panic and disaster. The rupture between the North and South so soon followed, and so great was the strain of the war in its opening upon the financial resources of the whole people, and so many of the young men of the city went into the ranks, that all social and literary progress was checked. It greatly diminished the numbers and resources of the library. For five or six years it scarcely held its condition as in 1856. But near the close of the war an era of prosperity began, which closed this decade of ten years from 1856 to 1866 as one of the brightest and most successful in its history. A new catalogue was completed and \$7,500 expended in its publication; nearly \$12,000 expended for new books; a new act of incorporation granted giving the power to receive and use large legacies without doubt; and as a crowning success, the entire debt on Clinton Hall of \$62,000 was extinguished. During this year there was a total gain in membership of nearly 30 per cent. There were now 1,500 stockholders and 10,169 sharing the benefits of the library and reading room. The library now numbered 81,000 volumes, and the year's record showed a delivery of 178,000 volumes to its readers.

During the last nine years the association has advanced in wealth and power for good beyond any period in its fifty-four years. The officers

of the library and the trustees of Clinton Hall have specially sought to combine the knowledge and experience of forty-five years' administration here with that of the best popular libraries at home and abroad. They have sought to prove what is best in the daily record of delivery, in classifying and arranging the books upon the shelves, and the selection of books with special reference to the future needs of the library.

The reading room now contains the best American and foreign newspapers, magazines, and quarterlies, the total number of all being 417. On the 1st of May, 1875, the active and subscribing members of the library were 8,380, and the total number sharing its privileges 10,287. The library contained upward of 160,000 volumes. The number of volumes circulated and read during the last year was 203,000, and 7,332 were used as reference. A bindery is connected with the library, and thus a large saving is effected every year. A new catalogue is being prepared under the direction of Mr. W. T. Peoples, librarian.

The Mercantile Library holds the fourth place, as to number of volumes on its shelves, among American public libraries. Its property, real and personal, is about \$300,000 in value. Within its rooms it has gathered seven pieces of costly statuary, twenty portraits and paintings, and thirty engravings, all the gifts of its friends.

#### ASTOR LIBRARY.

The Astor Library was incorporated by act of the legislature January 18, 1849.

John Jacob Astor, a native of Germany, but during most of his business life a resident of New York, who died at an advanced age March 29, 1848, by his will devoted the sum of \$400,000 to the foundation and perpetual support of a library for the free use of the public. The management of this fund and of the library was committed by the will to ten trustees: Washington Irving, William B. Astor, Daniel Lord, James G. King, Joseph G. Cogswell, Fitz-Greene Halleck, Henry Brevoort, Samuel B. Ruggles, Samuel Ward, and Charles Astor Bristed, and *ex officio* the mayor and the chancellor of the State. He devoted \$75,000 to the erection of a building; \$120,000 to the purchase of books and furnishing it; and the investment of the residue, \$205,000, as a fund to purchase the site and for the maintenance, increase, and care of the library.

The site selected was a lot 65 by 120 feet on the east side of Lafayette Place, costing \$25,000, leaving \$180,000, the annual income of which is to be exclusively applied to the current expenses and increase of the library.

The first meeting of the board after Mr. Astor's death was held May 20, 1849, but it was legally organized under the act February 14, 1849, when Washington Irving was chosen president, and Samuel B. Ruggles secretary. Dr. Joseph G. Cogswell was appointed superintendent, and the success and value of the library have been largely due to the wis-

dom of this selection. A man could scarcely have been found so eminently fitted, both by his taste and his exact and extensive knowledge of books, for this responsible trust. The entire period of nearly five years, from 1849 to the opening of the library to the public, January 9, 1854, was spent by this learned and indomitable student in diligent labor in the libraries and book marts of Europe, or in his own study and library, where his invoices were verified, and the books arranged and classified on shelves in a house temporarily occupied for that purpose.

Dr. Cogswell spent the winter of 1852 in Europe. The result of this visit was an addition of 25,000 volumes, including a mathematical library of 3,000 volumes bought in Berlin, and one of 5,000 volumes, philosophical and miscellaneous, procured in Florence.

The aggregate expenditure at this period had been about \$100,000 at home and abroad, and the whole number of volumes then in the library was 80,000.

The corner-stone of the library was laid on the 14th of March, 1850, and the building finished in 1853. It is a plain structure of brick, raised upon a lower story of rustic ashler brownstone. The style of architecture is the Byzantine. The main library room is on the second floor, and is 100 feet in depth by 64 in width, and 50 feet in height. A broad skylight extending two-thirds the length of the room, with a row of large, curved panes of glass on each side and a double sash spreading horizontally across the centre, pours in a flood of soft light from above, which, with ten broad windows in front and eight in the rear, gives an exceedingly cheerful aspect to the library. By an economical arrangement of shelves and alcoves, the library affords space for 100,000 volumes. Up to 1854 the whole department of bibliography, containing over 5,000 volumes, and including many rare and costly works, was the gift of Dr. Cogswell.

Few scholars or bibliographers of any period have had a broader, clearer idea of what is necessary to form a great foundation library suited to the wants of scholars, investigators, and scientists, and to the pursuit of exact knowledge in all the arts. His idea cannot be better stated than by a quotation from one of his own reports. He said :

There are but few general libraries in this country which have been formed upon a system; . . . one that would enable the scientific inquirer to track the progress of knowledge and discovery to its last step; to furnish to the mechanic arts and practical industry in general, the help and guidance required from books; to make the artist familiar with the history, character, and style of the great masters of his art; to call up to the student the past, in all the wide range of imagination and thought, and to provide the best and healthiest intellectual food for the minds of all ages. If this is the character of the Astor Library, it is such an one as the founder intended to establish.

The design was to make this library a general and not a special one, and Dr. Cogswell labored with a wide knowledge of books and great and persistent assiduity to make every department complete. His system of classification was that of Brunet. The perpetual catalogue

of the Astor Library, as Dr. Cogswell termed it, he had at this time completed; that is, one so arranged as never to require any change, except that of being enlarged as the library increases. He proposed to the trustees that a classified catalogue be printed at periods as each department advanced towards its completion.

A better idea may be given of the great value of this library and what it contained, by a brief synopsis of the comparatively full report of Washington Irving, made at the date of its opening with 80,000 volumes.

*Theology.*—The department of theology comprised the best editions of the Hebrew and Greek Scriptures; the Walton Polyglott; various editions of the Vulgate; numerous versions of the whole Bible and parts in the principal languages of Europe and the East; the Fathers in full, with most of the Benedictine editions; Bibliotheca Maxima of Despont; Cotelier's Patres Apostolici; the most important works on the councils, and Colet's edition of L'Abbé, in 29 volumes; Concilia Maxima, 37 volumes folio; quite full collections in scholastic and polemic theology; all the early and recent English divines.

*Jurisprudence.*—The department of jurisprudence included a good collection on civil law, many editions of the Corpus Juris; commentaries on it; the codes of Scandinavia, and other parts of Europe, during the Middle Ages; jurisprudence as now practiced in Italy, Portugal, Germany, Denmark, and Sweden; the most important works on the laws of Spain, with digests and commentaries on the Mussulman, Hindoo, Gentoo, and Chinese laws; collections on French law, from the ordinances of the kings down to the volumes of the Journal du Palais, and selections from the English common law, made by two of the most eminent jurists in the country.

*Sciences and arts.*—The department of natural sciences was one of the richest and best furnished in the library, and very costly: Palmarum Genera et Species, by Martius; Wallich's Plantæ Asiaticæ Rariores; Roxburgh's Plants of the Coast of Coromandel; complete set of Gould's Birds of Europe, Australia, the Himalayas; Audubon's Birds of America; Sibthorp's Flora Græcâ, and hundreds of like character, nearly 5,000 volumes.

*Chemistry and physics.*—All the publications of the principal societies of Great Britain, France, Belgium, Holland, Germany, Denmark, Sweden, Norway, Russia, Italy, Spain, and Portugal; also, of the United States. The object was to provide a complete bibliothèque industrielle; i. e., books for the special benefit of practical industry. These then numbered nearly 5,000.

*Mathematics.*—It was rich both in pure and applied mathematics. It drew largely upon the libraries of Halley, Legendre, Jacobi, and the two Heiligenstadts of Berlin. A competent judge, resident of Berlin, considered it more complete than that of the Royal Library there. At any rate, it may be ranked with the first abroad. Besides all the

works of Euler and Gauss, and all the mathematical journals, it has all the works of Newton, Leibnitz, the Bernoullis, Laplace, Delambre, Lacroix, Legendre, Lagrange, Jacobi, and a large collection of astronomical observations and many rare papers not easily found.

*The fine arts.*—No part of the library cost so much money. In the four branches of the fine arts proper, including archæology, there are 2,500 volumes, the first 50 of which cost nearly \$3,000, all large folios bound in red morocco. Among the works in this department are Piranesi's *Antiquities*, 21 volumes; *Musée français*, 4 volumes, and *Musée royal*, 2 volumes; Raphael's *Loggie del Vaticano*, 3 volumes; *Grecian Antiquities*, 13 volumes; Gruner's *Fresco Decorations of Italy*.

*Literature.*—In this the library is very strong. It has grammars and dictionaries of one hundred and four different written languages and dialects, and numerous vocabularies of unwritten ones. It has all the families and branches of the European languages, and most of those of Asia and Africa. It contains the best works on Egyptian hieroglyphics and cuneiform inscriptions. It has the best vocabularies of dialects of the Mexican and South American Indians, published by the early Spanish priests; the *Seven Seas*, a dictionary and grammar of the Persian language by the late King of Oude, 7 volumes folio. Greek and Latin literature is well represented. There are more than a dozen editions of Homer—one the *princeps* of 1488; as many as six each of the Greek tragedians, of Pindar, of Demosthenes, Herodotus, Thucydides, and others. In Latin there are twelve editions each of Virgil and Horace; six each of Ovid, Cicero, Livy, and Pliny. In Spanish, Portuguese, Italian, and French literature, there are more than 3,000 volumes. There are more than 1,000 volumes of German belles-lettres of this century. In Dutch literature are nearly 200 volumes, among them the complete works of the immortal Cats.

The historical department, last in the order of classification, constituted at least a fourth part of the library.

The library possesses a complete collection of English parliamentary journals, debates, and reports—over 2,000 volumes. These and other similar European documents make nearly 3,000 volumes. The American public documents of Congress and the States are still more complete.

The South Library was opened in 1854. In October, 1855, Mr. William B. Astor presented to the board of trustees a deed of the land, 80 by 120 feet, adjoining the edifice already completed, and signified his intention to erect thereon an exact counterpart of the building completed. This new North Library was similar in size and architecture to the South Library, and was completed and opened September 1, 1859. The books were so far changed as to devote the entire South or first library exclusively to science and the industrial arts; the North or new library, to history and literature. This last department, when fully arranged, embraced 60,000 volumes of the 110,000 volumes then in the whole library. This new building being 65 by 120 feet left a space of 15 feet on the easterly side of the lot for light and ventilation.

Dr. Cogswell, who had already shown great ability in his preliminary index of books needed for a library, and extraordinary judgment and economy in the purchase of the collection, completed his Alphabetical Catalogue in four volumes royal octavo, of 2,110 pages, in 1861. He resigned the office of superintendent in November, which was accepted on the 6th of December of that year. He had been for several years in failing health, and resigning, in 1864, his office as trustee of the library, removed to Cambridge, Mass., where he died on the 26th November, 1871. Not long after his retirement he was enabled to complete the supplement and analytical index to the catalogue of the library. The trustees, in their minute of his character and services, said:

For nearly twenty years he has devoted to this institution the unremitting efforts of a well directed and spotless life. . . . Had this last book been produced by a mature and vigorous scholar, at the most robust period of his life, it would have been a remarkable proof of knowledge and practical skill; but as the work of an octogenarian it was a literary curiosity, and the most valuable American contribution to the department to which it belonged.

Mr. Francis Schröder was next appointed, and held the office of superintendent for nearly ten years. He was succeeded by Dr. Edward R. Straznicky, for many years an assistant, who died in February, 1876. The present superintendent is J. Carson Brevoort; the librarian, F. Saunders.

During the twelve years since Dr. Cogswell's retirement as trustee, in 1864, the library has steadily advanced in the yearly additions to its volumes, in financial resources, and in its admitted influence in widening the area of knowledge and research. It is made accessible to the whole community without fee or ceremony, except the requisite age. It has passed, by free gift, out of the hands of its founders to those of its trustees, for the use of the public.

The part of the original donation of \$400,000 by John Jacob Astor not expended in the edifice and books, equal to \$180,000, has constantly accumulated its interest. The amount of the total munificent additions made by William B. Astor, in the erection of the North Library, and in books to the value of more than \$60,000, exceeds \$300,000. The entire fund given by father and son — already invested and at interest to sustain and increase the library — now makes a grand total of \$773,336, while the library has reached a total of 152,446 volumes. The inestimable value of the library will be appreciated when it is remembered it contains no light nor ephemeral books; that its books are for reference and consultation, to be read within its walls, and are, so far as practicable, of lasting value.

*Statement showing the number of readers, and books consulted, in the Astor Library from the year 1860 to 1874.*

| Year.     | Books read. |           | Volumes, total. | Readers in both departments. |
|-----------|-------------|-----------|-----------------|------------------------------|
|           | Scientific. | Literary. |                 |                              |
| 1860..... | 25, 533     | 33, 983   | 59, 516         | .....                        |
| 1865..... | 18, 896     | 26, 070   | 44, 966         | 23, 085                      |
| 1866..... | 21, 437     | 32, 877   | 54, 314         | 24, 941                      |
| 1867..... | 27, 251     | 39, 175   | 66, 426         | 31, 343                      |
| 1868..... | 32, 085     | 42, 570   | 74, 655         | 32, 299                      |
| 1869..... | 33, 742     | 43, 357   | 77, 099         | 32, 634                      |
| 1870..... | 32, 422     | 46, 513   | 78, 935         | 30, 911                      |
| 1871..... | 39, 428     | 58, 505   | 92, 023         | 30, 909                      |
| 1872..... | 55, 660     | 55, 657   | 111, 317        | 32, 557                      |
| 1873..... | 58, 939     | 57, 755   | 116, 694        | 35, 956                      |
| 1874..... | 61, 493     | 66, 086   | 127, 579        | 41, 692                      |

From 1861 to 1864 the details were not preserved.

The value of the gift of the late William B. Astor and the personal oversight he gave for twenty years to perfect a technological department, embodying all branches of practical industry, cannot be overestimated. No department of the library is now more complete. That it is fully appreciated is seen in the fact that out of 6,838 alcove readers, within a certain period, 2,117 were in the department of patents.

The British commissioners of patents presented to the library a complete set of their extensive, costly, and valuable publications, from the earlier issues in 1617 down. These, with Mr. Astor's selections for the technological department, and other important works donated, have the highest practical and lasting value.

At the expiration of twenty years, two only of the original trustees (William B. Astor and Samuel B. Ruggles) remained. Those since appointed and now acting are James Carson Brevoort, John A. Dix, John Jacob Astor, Hamilton Fish, Thomas M. Markoe, M. D., William J. Hopkin, John Romeyn Brodhead, and Alexander Hamilton, jr. Washington Irving, president of the board from its organization, died in 1860. Daniel Lord, long its able supporter and faithful treasurer, died in 1868. Those who now direct its affairs are animated by the spirit of its founder and of the elder son, who so greatly added to its imperishable treasures, to make it a rich blessing both to this metropolis and to the whole American public.

#### APPRENTICES' LIBRARY.

This library was founded in 1820, and is an outgrowth of the General Society of Mechanics and Tradesmen of New York, organized in 1785 and chartered in 1792.

The first amendment of the charter gave it power to establish a school for educating the children of deceased members of limited means and

to found a library for apprentices. This was the origin of the library. The charter of 1833, and subsequent amendments, provided that one-third of the initiation fees should go to a distinct fund for disseminating "literary and scientific knowledge" through the medium of lectures; for a separate fund for the library and reading room; that the society might hold real and personal estate to the amount of \$500,000. The amendment of 1860 confirmed its titles to real estate, and that of 1872 gave power to hold property to the amount of \$1,500,000.

The society has five committees: library, literary, pension, school, and finance, the yearly reports of which show the extent of its benevolence and the steadily growing influence of the school and library.

The receipts from all sources, initiation fees, rents, and interest, amounted in 1875 to \$40,000, while its expenditures were only \$30,000. This annual saving has already accumulated a building fund of over \$47,000. This growing sum will soon be invested in a spacious fire-proof edifice.

The total value of all the property of the society, in real estate, stocks, bonds, library, and furniture, is now estimated at \$550,000.

The school prospered and supplied a great need of the time. But after the more extended organization of the public school system of the city, the day school was closed in 1863, and the school fund applied to the growing want of a practical, free, evening drawing school for the apprentices of the city. It now numbers over 400 pupils, devoted to freehand, mechanical, and architectural drawing, and 50 or more to writing and book-keeping, and is doing an important work.

From its foundation to 1846, the library was open in the evening only. Now it opens at 8 a. m. and closes at 9 p. m. Members of the society pay \$50 initiation and no annual dues. It is free to all apprentices and female operatives, and to all others the terms are \$2 per annum. In 1846 it contained 17,000 volumes and had 1,600 readers. It now contains 53,000 volumes and has over 7,000 readers.

A catalogue was issued in 1865, and two supplements in 1869, under an alphabetical list of authors, with brief titles. Mr. J. Schwartz, who has filled the post of assistant librarian and librarian for the last thirteen years, found that the alphabetical system, in the rapid increase of books and readers, caused much confusion through the want of numbers on the covers of the books to control their position on the shelves. Having studied the various systems of library economy, he devised a new system of arranging the books in 1872-'74, based upon the three systems, alphabetical, numerical, and classified, as co-ordinate parts of the whole, these three elements being combined in his plan in an equal degree.<sup>1</sup>

The library contains about 1,500 volumes, in cyclopædias and other books of reference; in natural science and useful arts, nearly 4,000; in fine arts, poetry, and literature, 4,000; in fiction, 15,000; in history,

<sup>1</sup> A description of Mr. Schwartz's plan will be found in Chapter XXVIII, p. 657 *et seq.*, of this report.—EDITORS.

biography, voyages, travels, and geography, 10,000; philosophy and theology, nearly 4,000; in juvenile literature, 4,000; and about 10,000 duplicates and miscellaneous works make up the total of nearly 53,000 volumes.

The total circulation the last year was nearly 115,000 volumes, and of this large number only 64 were unreturned at the close of the year.

In 1862, the free use of the library was extended to workingwomen. The result has been, and continues to be, most gratifying. During the last year 2,500 girls enrolled their names as readers.

#### NEW YORK LAW INSTITUTE.

The first steps toward the creation of the Law Institute were taken in 1825. In 1828 it was fully organized, and Chancellor Kent elected president. The nucleus of a law library was formed by the purchase of the private collection of Robert Tillotson. The voluntary association having failed to meet the expectations of its founders, a charter was obtained in 1830. The growth of the library for some years was slow; in 1842 it numbered but 2,413 volumes; in 1851, 4,544 volumes; in 1855, 6,000 volumes; and Justice Kent then said it was one of the most valuable collections in the United States. In 1842, a catalogue was prepared by Vice-Chancellor L. H. Sanford.

From 1828 to this date, 1876, the library has received larger or smaller donations from more than one hundred members, from the commissioners of public records of Great Britain, and from law book publishers in Europe and at home.

It has become a success in the highest and broadest sense, and now furnishes the bench and bar of the city in legal treatises, text books, American and foreign reports, collections of leading cases and trials—resources of incalculable value.

The library, now the best public law library in the country, contains 20,000 volumes, complete sets of reports of courts of all the States; the Federal courts; the latest revisions of the statutes; complete reports of English, Scotch, and Canadian higher courts; one of the best collections of the statutes of all the States; one of the largest collections of the session laws of all the States; nearly all the leading English and American text books, and treatises; one of the largest collections of trials; one of the largest collections of English and American law periodicals; next to the library at Washington, one of the best collections of French law in the country. It has also a very fine collection on the literature of the law, memoirs and biographies.

#### LIBRARY OF THE AMERICAN INSTITUTE.

This library was begun in 1833, to promote the objects and success of an association called the American Institute, which was organized in 1829. It was at first a share library, of \$25 each. Subsequently these shares were relinquished for life memberships, or given up. Members

only of the institute can take books. Initiation fees and dues, at \$10 and \$5 per annum, are paid, as from members of the institute, and not of the library.

In 1850 the library numbered 6,500 volumes, valued at over \$7,000. In 1859 it was removed to rooms in the Cooper Institute, where it still remains.

In the forty-seven years of its history the institute has held forty-four fairs. These have served two important objects: (1) to supply an ample revenue; (2) to extend a knowledge of new inventions, and of the application of old principles to new forms in agricultural, mechanical, and domestic implements and machinery. The transactions and awards of these fairs make thirty-two printed volumes, which have been published by the State. The appropriation for this object having been discontinued, they are no longer printed.

In the selection of books careful attention has been paid to the requirements of the institute in pursuing investigations relating to mechanics, agriculture, and other special subjects.

An alphabetical and analytical catalogue was published in 1852, and a supplement in 1857. The analysis divides the library into twelve divisions. The principal ones are, science, art, belles-lettres, geography, voyages and travels, history, biography, law, transactions, and periodicals.

Under the head Science in this division of the library are five branches: Universal, mental and moral, political, exact, and natural; under that of Arts are four: Mathematical, natural, fine, and miscellaneous.

The subdivisions under Universal Science are given as encyclopædias and dictionaries. Under Exact Science: Arithmetic, mathematics, and astronomy; under Natural Science: I. Natural philosophy and chemistry; II. Natural history; III. Anatomy, physiology, medicine and surgery. Under the Mathematical Arts are embraced: Engineering, art of war, and navigation. Under the Natural Arts: Agriculture.

The growth of the library has been slow, but it is strongest in these divisions of science and the arts. These branches, more than any others, have seemed to serve the ends of the institute. The library now contains 10,600 volumes. For two years no books have been added except by donation. The object of the institute, as expressed in the charter, is to promote domestic industry in this State and the United States, in agriculture, manufactures, art, etc. It has for several years directed its chief energies to its Fairs and Farmers' Club.

#### THE AMERICAN GEOGRAPHICAL SOCIETY.

The first effort to establish a geographical society in New York was made by Rev. Francis L. Hawks, George Folsom, and others, in 1850, but nothing was accomplished till October 9, 1851, when the American Geographical Society was organized, and Henry Grinnell elected president. It held its first public meeting after organization at the rooms

of the Historical Society in the University of the City of New York. It was shortly thereafter established in a room of its own in that building, when it rapidly increased in members, began to accumulate a geographical library, and to have lectures in the chapel of the university on geographical subjects.

On the 13th of April, 1854, it was incorporated by the legislature of New York by the title of the American Geographical and Statistical Society, which was afterwards changed by another act to The American Geographical Society of New York.

Its efforts were chiefly applied to building up a geographical library, and the formation of a collection of maps and charts of all parts of the world. The ultimate object was to establish in the chief maritime city of the United States an institution where accurate information might be obtained respecting all parts of the globe. To this for some years its efforts were mainly directed. These were greatly aided by the contributions of books and liberal donations of money by many of its members.

It has now a library of over 10,000 volumes, which is especially rich in works relating to North and South America, and is very full in respect to Asia, Africa, and the Arctic. It comprises very valuable and extensive collections of elementary works, of works of all kinds on statistics, and of the publications of the geographical societies of the world, and is the only place in this country where these publications can be found to so great an extent. Its collection of voyages, travels, journeys, and explorations in all parts of the world is extensive and very valuable.

It has a geological department quite full in geological reports and publications relating to the United States and Canada. It has a large, valuable, and connected series of atlases, from the first atlas of Ortelius down to the present time, in which all the atlases of the great cartographers, Dutch, German, French, and English, will be found.

The library also embraces the larger part of the publications of the Government of the United States and of the different States upon geographical, geological, and scientific subjects. Its collection of charts and maps is large, though not as extensive as that of the Royal Geographical Society of London, but its geographical library is said to be more valuable than either the library of the London or Paris Geographical Society, although the library of the London society is larger.

The New York society has now over 1,800 fellows, 20 honorary and a large body of corresponding members at home and abroad.

Its presidents in these twenty-four years have been Henry Grinnell, George Bancroft, Francis L. Hawks, and Charles P. Daly. Its present general secretary is Lieut. James T. Gardner, late geographer-in-chief of the United States Geological and Geographical Survey of the Territories, and of Clarence King's Survey of the Fortieth Parallel.

The report of the society to the legislature is reproduced in the form of an annual publication.

Charles P. Daly has been president since 1861. He has delivered in this period a series of anniversary addresses, reviewing the work of the society and the explorations and discoveries in all parts of the world—several of them so exhaustive that the series would form, if published, a valuable epitome of this important branch of knowledge.

The society has secured a fund of over \$30,000, and hopes soon to remove to an edifice of its own with ample room for its growing collection.

#### LIBRARIES OF THE COLLEGE OF ST. FRANCIS XAVIER.

The college library contains about 15,000 books. It has a good collection of Bibles in original texts and approved versions; also, commentaries, dictionaries, and concordances of the Bible; a full collection of the Greek and Latin Fathers, and a good representation of standard works in theology, exegetical, dogmatic, and polemical. It contains the Bollandist collection of the Lives of the Saints, complete in 60 folio volumes, from St. Peter, about the year 56, down to the last saint canonized.

In patrology, it has of l'Abbé Migne's edition of the writings of the Fathers, 220 or more volumes, in Latin and Greek, from Tertullian, in the second century, down to the thirteenth, the time of Innocent III. This collection is very nearly full in the faculty library, the original design of Migne being to issue 200 volumes of the Latin Fathers and 100 of the Greek. It is very well represented in ancient and modern history, and quite full in ecclesiastical. It has a good collection in the several branches of science. It is also fairly represented in works on jurisprudence, canon, common, and statute law. It is fairly represented in geography, ancient and modern, and in travels; and has a very good collection in literature and philology. This library has been selected with special reference to the wants of the faculty in the several departments of instruction.

The library of the college students contains nearly 6,000 volumes of well selected books. It is very conveniently arranged for active use. The volumes are grouped upon the shelves according to size and subjects, on a plan similar in its general features to that of the Apprentices' Library of New York. The perfect system in the minor details of the shelf arrangement of that library is not carried out. The five general heads under which this library is arranged are: Religion, under shelf sections, represented by the letters of the alphabet from A to G; literature, from H to M; history and biography, from N to S; fiction, from T to Z; science and travels, from AA to GG.

The Xavier Union is a literary social club—comprising students, alumni, and Catholic young men of the city—which has a select library of about 5,000 volumes.

#### NEW YORK ACADEMY OF MEDICINE.

This academy was instituted in 1846 and incorporated in 1851.

The objects of the academy are, the cultivation of the science of med-

icine, the advancement of the character and honor of the profession, the elevation of the standard of medical education, and the promotion of the public health.

The members comprise four classes, resident, non-resident, corresponding, and honorary fellows; the corresponding fellows limited to one hundred; the honorary, who must be distinguished in the profession, to fifty. The terms of membership are \$5 initiation and \$10 annual dues. The meetings are held semi-monthly.

The committee on medical education have cognizance of the system of medical instruction, private and public, in the city and State of New York. They recommend all improvements in office training and examinations; text books; reading in practical studies proper for the student; public courses, practical and theoretical, for the colleges and hospitals, and make such suggestions as seem necessary to render the system of medical education thorough and efficient.

Since instituted, twenty-five years ago, the academy has gathered a library of about 3,000 volumes. It embraces many rare and standard works in medicine, surgery, and the allied sciences. Its notable specialty is in complete files of American medical periodicals, medical transactions of State societies, files of hospital reports, and medical journals of Great Britain and the Continent.

The members number 325. The annual income approximates to \$4,000, chiefly from dues.

#### LIBRARY OF THE YOUNG MEN'S CHRISTIAN ASSOCIATION.

The first London association of young men as a Christian body was formed in 1844, and the first on this continent, after the London plan, was at Montreal, in 1851. The first formed in the United States was in the same year, at Boston, Mass. In the following year, 1852, associations were formed at New York, Buffalo, and Washington. The first convention of associations in America was held at Buffalo, in 1854, and so popular was this method of organization for mental and moral improvement, and so fruitful in good results that in 1860-'61, on the breaking out of the civil war, there were about 200 associations in the United States. Many suspended work during the war, and some were disbanded, so that the total number then existing was one hundred and sixty.

The New York Association, formed in 1852, occupied leased rooms in several parts of the city till 1869, when the edifice now owned and occupied, at the southwest corner of Twenty-third street and Fourth avenue, was completed, at a cost, for land and building, of \$500,000.

The library was founded in 1852, and when opened in the new building, in April, 1870, numbered only 2,000 volumes. It now numbers 10,552 volumes, and is valued at \$20,000. Of the books, about 25 per cent. are fiction, all very carefully selected. History, biography, and literature form 32 per cent.; science, about 14; poetry,

fine arts, travels, and cyclopædias, about 19; and miscellaneous works form the remaining 10 per cent. From the foundation, the library committee has never fostered a taste for light reading, but every year supplies the best standard works. A large number of these are superior English editions. Though not numerous, the department of art is rich in many choice works. One work specially worthy of notice is a unique collection of 8,000 portraits engraved on copper in the highest style of that art, collected by John Perceval, earl of Egmont, and supplemented by John T. Graves, covering a period from the first century down to 1736, in 35 folio volumes.

In the year 1875, 17,600 volumes were drawn from the library by about 14,000 readers. The library room and reading room, on a separate floor, comprise 375 magazines, reviews, and newspapers, and during the last year over 30,000 persons were admitted to these rooms. The library has shelf room for 20,000 volumes. It is open, free, from 8.30 a. m. to 10 p. m. daily to members and to all respectable persons who comply with its rules.

#### LIBRARY OF THE COOPER UNION.

This library forms a department in the institution founded by the munificence of Peter Cooper for free instruction in science and art. It is made an auxiliary to the work of education, and, with its extensive reading room, becomes a ministry of great power also to those outside of the school, who continually share in its treasures. It already numbers 17,500 volumes. At least 6,000 of these relate to practical science and art, including standard and popular authors. Its extensive files of the best foreign and American scientific periodicals are bound at the close of each year, and make an important element in the library. Among these are the *Franklin Institute Journal*, (complete series,) *Silliman's Journal of Science and Art*, (complete,) *Youman's Popular Science Monthly*, *Van Nostrand's Engineering Magazine*, *London Popular Science Review*, and the *Annals of Chemistry*, both from Paris and Berlin. The bound volumes of periodicals in other departments, literary and miscellaneous, with the works of fiction, which are of the highest order, aggregate 6,000 volumes more. History, biography, general literature, and books of reference make up the remainder. Among the latter are a set of the Patent Office reports, nearly complete, from 1843 to 1876, making 180 volumes. In this class it has the *Edinburgh*, *Britannica*, *Lardner's*, *Ree's*, the *American*, *Penny*, *Tomlinson's*, and *Chambers's Cyclopædias*; also, *Dunglison's*, *Gregory's*, and *Ure's* dictionaries.

Of American and foreign newspapers, daily and weekly, it has on file 192; of magazines and reviews, American and foreign, 120; making a total of 312. In 1875 over 190,000 books and periodicals were delivered to the very large total of 600,000 readers of both sexes. No books are taken from the library, and the number of daily visitors ranges from 800 to 2,500.

The sixteen years' existence of the Cooper Union, with its schools, library, and reading room, already fills one of the brightest pages in the history of education in America. The common schools, seminaries, and colleges deal with rudiments, or a higher and more exact discipline, but little or not at all with industrial and artisan skill. The Cooper Union is the first and only instance in American history where a great fortune has been devoted to instructing and training the masses in the elements of science and art, for the special object of producing skilled labor in all industrial pursuits, and elevating and advancing those who are taught by bringing each branch of instruction as close as possible to practical life and remunerative labor.

The total amount expended in erecting the building and in sustaining the institution down to the present is \$1,372,840.

#### MEDICAL JOURNAL ASSOCIATION OF THE CITY OF NEW YORK.

This association, organized in 1864, is designed to furnish immediate access to all the current medical literature in the department of medical journals and monographs. The prominent American, English, French, and German journals are taken. During the winter, regular Friday evening re-unions are held, at which digests of all new and important matter appearing in the medical journals, as well as other matters of professional interest, are presented and discussed. The library contains about 3,500 volumes, mostly of these journals, gathered in the eleven years since the association was formed, and some hundreds of volumes of special monographs.

The membership numbers 350, comprising physicians and surgeons in good standing.

Terms are \$10 per annum. The reading room is in the building of the New York Academy, 12 West Thirty-first street, where the re-unions are also held.

The income is about \$3,500 a year, devoted to these public journals and current expenses.

#### LIBRARY OF THE BAR ASSOCIATION.

This association was organized in 1870 to supply a want which the Law Institute could not meet. That institution, first established to advance the fellowship and social culture of the legal profession, had existed above forty years. For a time in its early history it admirably served this purpose; but at length the means and strength of the institute were wholly directed to creating a large and valuable law library for the consultation and use of its members.

At the time of this movement in 1870, two imperative needs were felt by the older members of the bar. The first was an up-town library, where the large and increasing numbers of the profession could profitably employ the evening in the preparation of their causes for the next day, and where plans for reforming both the administration of law upon

the bench and the abuses in practice could be discussed. The movement was initiated by William M. Evarts, Charles O'Connor, Samuel J. Tilden, Charles Tracy, and other prominent members of the profession. The act of incorporation, passed April, 1874, named William M. Evarts president, James W. Gerard, Samuel J. Tilden, Joseph S. Bosworth, John Slosson, and Edward S. Van Winkle, vice-presidents, under the title of the Association of the Bar of the City of New York.

The association soon numbered three hundred members. The initiation fee of \$50 each and the annual dues of \$40 created a fund of \$27,000. A commodious house was purchased for \$43,000, and the larger part of this fund applied to the payment therefor. In three years the indebtedness of the association was extinguished.

The foundation of the library was laid by one hundred members subscribing \$100 each in cash. The general fund afforded ample means for yearly additions to the library, so that at the end of the sixth year it numbered nearly nine thousand volumes. The growth of the association to nearly seven hundred members and the increase of the library made it necessary to seek more commodious quarters. A larger building, situated on West Twenty-ninth street, was bought, and the library removed thither in October, 1875.

The library, which now contains between nine and ten thousand volumes, embraces complete sets of the reports of the courts of all the States; complete sets of the reports of the Federal courts, the last revisions of the statutes of all the States, a large collection of the session laws of all the States, complete sets of English, Scotch, Irish, and Canadian reports, the English reports going back to the thirteenth century, and a large collection of text books and treatises on law.

#### LIBRARY OF THE COLLEGE OF THE CITY OF NEW YORK.

By an act of the legislature, May 7, 1847, the board of education of New York City was authorized to establish a free academy for higher education, the curriculum to approximate to the ordinary college course. The privileges of the academy were limited to those who had been pupils in the common schools of the city, and had attained the age of twelve years.

The academy building was completed in January, 1849, at a cost, for land, edifice, library, apparatus, and furniture, of \$90,000. In 1866 its name was changed by act of legislature, to The College of the City of New York, with full powers of a college under the revised statutes, and it was made subject to the visitation of the regents of the university. The board of education are ex-officio trustees of the college, and a later act makes the president ex-officio a trustee and one of the executive committee in the government and management of the college.

The library is valued at \$60,000. It has a library fund of \$35,000; it contains about 20,000 volumes, besides about 13,000 text books, which are supplied at the expense of the college. It is full in scientific jour-

nals, containing, it is said, the only complete set in New York, of the Philosophical Transactions of the French Academy of Sciences. It has Silliman's and many other standard journals. It contains all the latest authors in chemistry, physics, natural history, mathematics, and astronomy. It is very full in the best authors on the history both of ancient and modern nations. It comprises standard works on chronology, archæology, and numismatics. It has full collections of the best authors of French, English, and American history—original works and reprints. French, German, and Spanish literature, both classical and the best modern works, are quite well represented. Much attention has of late been devoted to the classical department and to comparative philology. There are not only complete sets of the Delphine and Lemaire editions of the Latin classics, but the most reliable modern editions, both English and German, have been selected.

English literature is fully represented. Of works of fiction it contains only the great English novelists. It contains all the prominent encyclopædias, American and foreign, and several biographical dictionaries. The art department, though not numerous, is quite select.

The object of the library is to place within reach, both of professors and students, the standard works on all the subjects taught in the college.

#### THE LENOX LIBRARY.

Taking into view the quiet and beautiful site of this library, at one of the elevated points on Fifth avenue, in front of Central Park, the simple but massive proportions of the edifice, the admirable adaptation of the interior to the purposes of so large an institution, and the unique character of the collection to be placed in it, the Lenox Library, founded by James Lenox, excels, in many respects, any other similar foundation in America.

*Locality and dimensions.*—It fronts on Fifth avenue, and covers the entire block of 200 feet between Seventieth and Seventy-first streets, with a depth of 125 feet. While not designed upon any distinct order of architecture, as the Doric, Ionic, or Corinthian, it is simple, classic, and grand in the mass. It is built of white Lockport limestone, or marble, finely polished, and embraces a central building with two projecting wings, the object being to secure all the light possible for the library rooms and galleries. The building is 192 feet parallel to the avenue, and 114 feet deep, with a front elevation of 105 feet. The central part of the edifice for a space of 96 feet is set back 42 feet from the front line, thus forming a courtyard 42 by 96 feet, with a flight of steps to the front entrance. The main entrance from the street is through two massive gateways and this court.

*First story.*—The principal entrance door opens into a vestibule 24 by 96 feet. This vestibule, the floor of which is laid with white marble tiles, communicates at each end with a north and south library room, each 30 by 108 feet. These rooms are 24 feet high, and each has six

THE LENOX LIBRARY.

alcoves, or recesses, 6 by 24 feet. The windows of each library room are 10 feet from the floor, to secure a large amount of wall space. In the rear of the centre of this spacious vestibule are the janitor's office, the cloak and retiring rooms, with broad stairways on either side ascending by two easy flights to the second story. Half way up is a mezzanine or half story between the library rooms, (which by reason of their height afford ample space,) on which is a commodious suite of apartments for the librarian, with parlor, dining, service rooms, and every convenience. This completes the first story.

*Second story.*—Ascending to the second story, two doors open into the principal art gallery, which is directly over and of the same size—24 by 96 feet—as the vestibule below. Three large windows open on the balcony and the court, looking on Central Park. The sides of the room are divided by five arcades resting on piers, which are decorated with niches. The walls are finished in oak to the height of these niches. At both ends of this gallery, north and south, are library rooms, 30 by 108 feet, with six alcoves or recesses in each, as on the street floor, and like those except in height. These latter have vaulted ceilings, 40 feet in the centre and 35 feet at the sides. A second picture gallery on this floor, directly over the librarian's apartments, is 40 by 56 feet, well lighted by large sky-lights, and tastefully skirted with dark wainscoting, which completes the second story.

*Third story.*—The north stairs ascend to the third or attic story, to a third gallery for paintings, 24 by 96 feet, the walls of which can be used on three sides, the fourth being occupied by the windows and a broad balcony extending nearly the whole length of the room, to afford a better view of the paintings and easier access to the windows, which command an extensive prospect. On this floor is the tank-room, which will afford an ample supply of water for the entire building.

*Basement; heating and ventilation.*—The basement is 12 feet in height and extends under the whole building; is thoroughly dry and will be used for storage of books, for boiler-room, with four large boilers, fire-pump, and complete steam and water works. Great care has been given to the heating by steam, and the ventilation, which work together and are so arranged that the engineer has control of the heating and ventilation of the whole building without leaving his floor. The air in each room can be changed every thirty minutes, if necessary, and the librarian's office communicates by speaking tubes with the principal rooms, and with the janitor, and engineer, so that he can at all times control both heat and ventilation.

*Capacity and cost.*—The book presses or cases are of iron, arranged in two tiers, with galleries, and for convenience of access in administration, staircases of iron have been placed in two of the recesses on each floor. The four library rooms, if filled to the extent of their capacity, will each contain over 75,000 volumes, or the four an aggregate of over 300,000 volumes.

Mr. Lenox has already formally given to the library \$385,000 in cash,

and probably smaller sums to make the total \$400,000. Of this sum and interest, after completing the building, there remain \$212,000 as a permanent library fund. His gift of ten city lots for the site may be estimated, at present depressed prices at \$300,000, making the total \$700,000. This is exclusive of the costly collection of books and manuscripts in process of transfer and arrangement in the library.

*Trustees and librarian.*—The act of incorporation, passed January 20, 1870, made the following nine gentlemen the first trustees of the library: James Lenox, William H. Aspinwall, Hamilton Fish, Robert Ray, Alexander Van Rensselaer, Daniel Huntington, John Fisher Sheafe, James Donaldson, and Aaron B. Belknap. James Lenox was elected president and A. B. Belknap secretary. Six years have been occupied in the construction of the building. George H. Moore, for twenty years connected with the New York Historical Society, has been appointed librarian, and is arranging the collection for the use of the public. In its present shape the numerical extent of the collection cannot be given. Some of the prominent features which made the private library of the founder exceptionally rare and valuable can only be referred to in this brief sketch.

This private collection, not perhaps exceeding 15,000 volumes, has been known to scholars and bibliopoles to be very complete and costly in certain departments. In the specialty of American history and the materials for it, no private library in America probably equals it. It is known to contain not only all the more valuable books on America published in the sixteenth and seventeenth centuries, and the first half of the eighteenth, but most of the complete editions of the more valuable in the Spanish, Portuguese, Dutch, Italian, French, Latin, and English. In the *Bibliotheca Americana* of Henry Harisse are enumerated more than 150 volumes of the most valuable works on America, its discovery and settlement, published within a certain period, as in his collection. The Lenox collection of Spanish manuscripts relating to America is very large and valuable. The library contains the most complete collection of the editions of the De Bry books in the country.

No public or private library here is so rich in Shakspearean literature. It contains a great number of complete editions of the various forms of the dramatist's plays, as the first four folios, the first quartos, and subsequent issues. If not all, it has most of the twenty plays published in Shakspeare's lifetime, which are valued at their weight in gold. It is rich in Elizabethan poetry, exceeding most libraries in complete editions of the poets of that period. It is also rich both in works on the fine arts and on angling. Another specialty is its collection of Bibles, which is not surpassed in the country.

From what is known in general of Mr. Lenox's method of furnishing this corporate library, it is believed that he will double or treble his private collection with valuable works selected abroad. The public wait patiently for these rare treasures, sooner or later to be opened to scholars and the reading community.

## OTHER COLLECTIONS.

The following list embraces other public or semi-public libraries in New York and vicinity which contain each 1,000 volumes or more. Further statistics of these and minor collections will be found in the general table at the end of this volume.—EDITORS.

### VIII.—PUBLIC LIBRARIES OF PHILADELPHIA.

BY LLOYD P. SMITH,

*Librarian of the Library Company of Philadelphia.*

The idea, first carried out in New England, of free libraries supported at municipal expense, has not yet penetrated to Philadelphia. All the public libraries in this city are supported by the contributions of individuals. They are, however, nearly or quite all accessible, without charge, to the public for consultation, and from most of them the books may be borrowed on payment of a small sum. The remark recently made by Dr. Daniel Wilson, that "in no country in the world are public and private libraries and collections made available to the scientific inquirer with the same unrestrained freedom as in the United States," is eminently true of the libraries of Philadelphia.

There is no one of them that in itself approaches to completeness; but as several are devoted to special subjects, thus supplementing each other, they together form a group of great value and usefulness. The Philadelphia Library, including the Loganian collection under the same roof, and accessible to the members, is rich in early printed books, works relating to America, newspapers, periodicals, and standard English literature; the Law Library is a fine collection of reports, statutes, and other legal works; the Library of the Hospital and that of the College of Physicians are medical collections which, together, are of the first rank; the Library of the Academy of Natural Sciences is very rich in works on natural history, and that of the Philosophical Society in the transactions of learned societies; the Mercantile Library is strong in bibliography, and, possessing already 125,000 volumes well adapted to a circulating library, it grows and prospers marvelously; the Franklin Institute has a complete set of the American, British, and French patent publications; the University has 8,000 volumes on political economy and 5,000 on engineering; and the Historical Society has an invaluable treasure in the Penn Papers, while its collection of colonial and revolutionary manuscripts, local histories, books relating to the French Revolution, and curiosities, is important and rapidly increasing. It will

be seen that these separate collections virtually supplement each other. A better idea, however, of the resources of these various institutions will be obtained by taking them up in turn and giving a sketch of their history and present state. This paper will not be without value if it enables the student to ascertain whither he should turn his steps to find books on a particular subject.

First in point of antiquity is

#### THE LIBRARY COMPANY.

The foundation of the present institution was laid by Dr. Benjamin Franklin, who induced a small number of gentlemen to subscribe one hundred pounds; the books being first kept in Robert Grace's house, from which those who in 1731 signed the articles of association were allowed to take them to their homes for perusal.

Many particulars in regard to Robert Grace have been brought to light in Mrs. T. C. James's recent Memorial of Thomas Potts, jr. From that work we learn that Mr. Grace was born on April 25, 1709, and that he was the son of Robert Grace the elder, of Philadelphia, who removed thither from Barbadoes some time before February, 1707-'8. The younger Grace seems to have inherited property to a considerable amount, including the residence afterward noted as the cradle of the Philadelphia Library. This was situated on the north side of High (now Market) street, below Second, at that early date one of the most eligible portions of the city. The town-hall stood nearly opposite, in the centre of the broad thoroughfare, and was the place of meeting of the provincial assembly and governor's council. After Dr. Franklin and Mr. Grace became intimate friends, the latter's residence was selected as the place of meeting of the famous Junto, and a room therein was chosen as the place of deposit for the newly formed library. The house itself was perhaps one of the oldest brick houses in the city. An arched carriage-way opened in the rear upon Pewter Platter alley, and through this the members entered, so as not to disturb the inmates of the house. Here the idea of a public library was conceived and carried out, and here the collection remained for ten years, until removed to the upper room of the westernmost office of the State-house.

By slow degrees new members joined the company, and new books were annually added by purchase and donation. Among the donors the proprietaries of Pennsylvania are to be numbered, and from them a charter was obtained in 1742.

The utility and success of this association caused the establishment of other libraries; but it soon appeared to be more conducive to the interests of literature that there should be in Philadelphia one large rather than several small collections of books. Accordingly, coalitions gradually took place, until, in 1769-'71, the Amicable, the Association, and the Union Companies were merged in the Library Company of Philadelphia.

The library, which had been kept in the State-house since 1740, was in 1773 removed to the second floor of Carpenters' Hall, where it remained until 1790, when it was transferred to its present site in Fifth street. By the lapse of time the present building has become somewhat venerable, and its interior, though plain, is impressive. The late Dr. James W. Alexander, of Princeton, remarks in his *Familiar Letters*, "No library I have ever seen, not even the Bodleian, has left such traces on my imagination as the old Philadelphia, which I want to see again." The rooms contain portraits of Lord Bacon, Sir Isaac Newton, William Penn, John Penn, James Logan, Benjamin Franklin, Rev. Samuel Preston, (a benefactor of the library, the portrait by West,) William Mackenzie, and Joseph Fisher, (the former of whom bequeathed books and the latter money to the library,) Thomas Parke and Zachariah Poulson, (directors,) and others. Various relics, such as William Penn's writing desk, a colossal bust of Minerva, which formerly stood behind the Speaker's chair in the first Congress under the Constitution, a mask of Washington's face from the original, used for Houdon's statue, a reading desk of John Dickinson, (author of *The Farmer's Letters*), James Logan's library table, and other curiosities, are calculated to interest the visitor.

Since its organization the company has pursued a steady course of modest and unostentatious usefulness, its members and property gradually increasing until the former now number 967, while the number of volumes is more than 100,000. This includes 11,000, many of them rare and valuable, in the Loganian Library, founded by James Logan in 1750, and now, in the hands of the directors and three descendants of the founder, constituting a special trust.

The Loganian Library was kept from 1750 to 1792 in a building specially erected for it by the founder at the northwest corner of Sixth and Walnut streets. It is endowed with five hundred and ninety-six acres of land in Bucks County, originally leased by James Logan for one hundred and fourteen years. The lease expired in 1861, and under the provisions of the indenture the land was revalued and a new rent agreed upon for the further term of one hundred and twenty-one years. In 1983 another revaluation will take place, and so on, at the expiration of each one hundred and twenty-one years, for ever. The net income of the Loganian Library from this source is about \$700.

In addition, the institution has \$25,000 invested in bond and mortgage, the accounts being kept separate from those of the Library Company. Persons using the Loganian Library make a deposit to secure the return of the books borrowed, but no charge is made for their use.

Besides the books, the Library Company has a few thousand dollars at interest and the income from the Law Buildings adjoining the library; the total annual receipts being about \$12,000 for the Library Company, and \$2,200 for the Loganian Library. Members pay \$8 a year, and dispose of their shares—the par value of which is \$40, though they sell for more

LIBRARY COMPANY OF PHILADELPHIA, 1782-'90.

in the market—by transfer or bequest, but the assent of the directors is necessary before new members are admitted. It is not requisite, however, to be a member of the company to use the library. Persons desiring to consult the books (for any useful purpose) are allowed to do so in the rooms, and books may be taken out by subscribers (at \$12 a year) or by leaving a deposit of double their value. In the latter case a small weekly charge is made for their use, except for Loganian books, which are free.

Rotation in office has not yet invaded this venerable institution. It has happened more than once in its history that directors have held office for over fifty years, and during the last ninety years there have been only four librarians and five secretaries. Since 1750 the Loganian Library has had but six librarians.

During so prolonged an existence many books of value have naturally accumulated. Some account of these will be found in the preface to the third volume of the catalogue, and also in a paper in the *Atlantic Monthly* for March, 1868. It will be sufficient to mention here that the department of manuscripts is represented by examples in the Hebrew, Arabic, Abyssinian, Siamese, Burmese, Greek, and Latin languages; that of incunabula, by specimens (belonging to the Loganian Library) of the work of the earliest printers in Germany, England, Venice, and Rome, respectively; that of antiquities, among others, by Lepsins's, Rosellini's, Napoleon's, Gau's, and Vyse's Egypt; Botta's and Layard's folio plates of Nineveh; Kingsborough's and Lenoir's Mexico; the government works on *Herculaneum* and on the *Monuments of Paris*; Piranesi's and Canina's *Rome and Il Vaticano*, and that invaluable work, the photographs of the antiquities in the British Museum; while Spanish literature is represented by an excellent collection made by the late O. Rich expressly for the Loganian Library.

The strength of the two libraries, however, so far as rare books are concerned, lies in the department of works on America, which includes, for a single item, complete sets of many Philadelphia newspapers, forming continuous files from the first number of the first paper published in this city (1719) to the present time. The library possesses also Du Simitière's collection of books, pamphlets, and broadsides relating to the Revolution, a complete set of congressional and of Pennsylvania State documents, and nearly everything relating to Philadelphia, including all the important maps from 1682 to the present time.

A classified catalogue, made by the late George Campbell, librarian from 1806 to 1829, was published in 1835, and a supplement, also compiled by him, together with a copious general alphabetical index by the present librarian in 1855. The whole is contained in three volumes of 2,100 pages, and it has been pronounced by an expert, Dr. S. A. Allibone, to be, on the whole, the best printed catalogue known to him. The advantages of a catalogue raisonné are so evident that it is hardly necessary to particularize them. In a small library it is sufficient to have

books on the same subject together on the shelves. In a large library it is of advantage to the student to have the titles themselves classified. The arrangement adopted in the printed catalogue of the Philadelphia Library is fivefold, the classes being, respectively: Religion, jurisprudence, science and arts, belles-lettres, and history, each class having subdivisions. It is thought that the alphabetical index, in which every important word in each title is indexed and a reference made to the page where the full title is to be found, gives the catalogue all the advantages of an alphabetical, together with those of a classed catalogue. The titles of books added since 1855 are written on cards or, rather, slips of paper, which are kept—mainly after the plan recommended by the late Prof. C. C. Jewett to the librarians' convention of 1853—in alphabetical order. They occupy thirty-two drawers, the cross references being copious. Pamphlets are bound in volumes, with some reference to keeping those on the same subject together, and each pamphlet is catalogued as fully as a book, a figure being added after the number and size of the volume to designate its relative place therein. For example :

POTTER, (Alonzo.) 17137. O. 7. A discourse commemorative of the Rt. Rev. Alonzo Potter. By William Bacon Stevens, bishop. Phil., 1866.

To this title there would be only one cross reference.

STEVENS, (Bp. W. B.) 17137. O. 7. See Potter (A.) for discourse by.

In the above catalogue slip the letter O. stands for octavo, and the figure 7 for the seventh pamphlet in the volume, numbered 17137 on the shelves.

It may be noted in passing that this pamphlet is considered as a biography of Bishop Potter, and the full title is given under his name and not under that of the author. This is, of course, an exception to the general rule, according to which the author's name is the catch word.

It would be desirable to have a complete printed catalogue of the library brought down to the present time, but the expense is too great for the resources of the institution.

The arrangement of the books on the shelves is by sizes, not by subjects. When a book is catalogued it takes one of four sets of numbers, according as it is a folio, quarto, octavo, or duodecimo. Its number in that set stands forever as its shelf mark, and the books themselves can be shifted *ad libitum* without altering the numbers. Alcove A, let us say, for example, on the floor contains Nos. 1 to 4000 octavo. In course of time the floor cases having been filled, and the older books not being so much in demand, Nos. 1 to 4000 may be removed from alcove A, carried up-stairs, and placed anywhere, there being no shelf marks to be altered. There is still a place for everything, and everything in its place. This plan, while not claimed to be the best possible, is not without its advantages. It is particularly well adapted for pamphlets, and it gives the books a neat and orderly appearance on the shelves. Certainly the larger the library the fewer are the evils of an absence of

RIDGWAY LIBRARY 1875-'76.

a classification by subjects on the shelves. Nevertheless, in practice, it is found necessary, in some cases, to vary from the arrangement by sizes only. For example, all the handbooks of travel are placed together on the shelves, and so are the encyclopædias, the directories, and certain books of reference constantly in demand for consultation in the rooms; and as regards the modern works of fiction also, a modification of the general plan has been adopted.

The bookcases are protected by wire doors, which are kept locked, with the exception of one case containing the newest books of a miscellaneous character, and another for the latest works of fiction.

The necessity of a fire-proof building for the safe keeping of this valuable library has long been felt by the directors, who started a subscription for that object in 1855.

In 1864, the late Joseph Fisher, bequeathed \$54,483.12 to this building fund, which now amounts to \$105,000. In 1869, the late Dr. James Rush left his large estate, appraised at over \$1,000,000, for the purpose of erecting a fire-proof building, to be called the Ridgway Branch of the Philadelphia Library. The building,<sup>1</sup> a noble structure of granite,

---

<sup>1</sup>The governing principles in the arrangement of this building were, that special rooms be provided in which to arrange the books, as well as separate reading rooms for the public, and that no books be obtained except over the librarian's desk, although a few books might be placed within reach of the public in the main hall and reading rooms.

Generally, then, the building may be said to consist of a centre, with north and south wings, the books to be stored in the north wing; the main hall occupies the centre, and the reading rooms are in the south wing.

The main hall is in the form of a cross, the western arm of which is occupied by the entrance and vestibule; the northern, next the books, by the librarian's department; the eastern, by a room for periodicals; and the southern, by the entrance to reading rooms, and by the staircase to gallery of main hall, and to the memorial and directors' rooms on the second floor of the south wing.

The north wing measures 32 feet 6 inches by 71 feet inside, and in the centre is open to the ceiling a height of 34 feet, having three tiers of galleries, 10 feet wide, on which the books are arranged in the form of alcoves. A space of 25 feet by 63 feet, between the north wing and centre, is also available for the storage of books, and ultimately wall cases may be put around the gallery of the hall. The total capacity for books may be put at 400,000 volumes.

The south wing is occupied by a general reading room 32 feet 6 inches by 71 feet, with a 20-foot ceiling. It is lighted by three large windows on each of the west, south, and east sides; is provided with two open fire places, and has access at either end to retiring rooms, lavatories, etc., for ladies and gentlemen.

In the angles of the central portion of the building, not occupied by the main hall, are a room for receiving and cataloguing books, a private room for the librarian, and two smaller reading or study rooms. These four rooms are each 22 feet square and 14 feet high, and are well lighted by two large windows each.

The length of the arms of the main hall are 85 feet north and south, and 60 feet east and west, and the width 35 feet. The height to the ceiling is 46 feet. There is a broad gallery, or, more correctly perhaps, a second floor around the hall, at a height of 15 feet from the floor, from which rise 24 Ionic columns and pilasters which carry the ceiling. Light is introduced by a Clerestory arrangement over the interior cornice,

in the Doric style of architecture, is now in course of erection, by the executor, at the corner of Broad and Christian streets, and will probably be finished in 1876. It is to be hoped that the munificent intentions of the testator, faithfully carried out by his executor, may result not only in a stately building for the ornamentation of the city, but also in a library of a size and income worthy of the sixth city of the civilized world.

#### THE AMERICAN PHILOSOPHICAL SOCIETY.<sup>1</sup>

This association was started in 1743 by Dr. Benjamin Franklin. This great man, who kept constantly in view the advancement of the community in which he lived, was well aware that this object could only be attained by combined efforts. Hence the number of associations in Philadelphia of which he was either the founder or one of the most efficient promoters. The Library Company and the Philosophical Society appear to have both grown out of the celebrated Junto, or debating society, founded when Franklin was but twenty-one years of age; and both, though always hampered by want of means, have for more than a century faithfully pursued the course of public usefulness originally planned for them.

The library of the Philosophical Society contains over 20,000 books, largely scientific works, but including many of historical value. In 1863, Part I of a printed catalogue was published, followed in 1866 by Part II. The third and concluding part is nearly ready for the press. The learned librarian has struck out an original method of cataloguing. "Eight principal classes carry from the universal to the special, from the abstract to the concrete, from the inorganic to the organic, from matter to mind. Each class begins with the theory of the subject and

---

by which means an abundant supply of light is obtained, without leakage from rain or snow, to which the ordinary level skylights are so subject.

Externally, the west front on Broad street shows the arrangements of centre and wings the former adorned with eight columns, and the latter with four each. The back or east front is of similar general design, but without the columns, and the north and south wings show a tetrastyle arrangement of pilasters with pediment over. The Grecian Doric was the style named for the building by the late Dr. Rush, and the following are the general dimensions: Diameter of column at base, 5 feet; height, including capital, 30 feet; intercolumniation, 12 feet 3 inches; height of entablature, 12 feet 3 inches; angle of pediments, 13°. The columns stand on a basement 8 feet high, and the principal floor is one step above this. A broad flight of steps leads up to the entrance in the centre of the building. The total length north and south is 220 feet; east and west, over portico and basement, 112 feet; and the height from ground to apex of central pediments 60 feet.

There is a well lighted basement under the whole building, with a ceiling 13 feet high, to which there is direct entrance from the back of the building. It will be heated throughout by steam, supplemented by open fires in all the reading rooms. It is built of Cape Ann and Quincy granite, with iron floors, ceiling, and roof, and may be said to be fire-proof, though the flooring and finish, for the sake of comfort, are of wood. Four of the sixteen front columns are now in place, and the structure will be roofed in this year.

<sup>1</sup> See *Scientific Libraries*, Chapter VII, pp. 185-186, and *Historical Societies*, Chapter XIII, pp. 363-364.

follows with its practice. Excepting the first, which represents the abstract conception of knowledge itself with its universal applications, each class advances the theme beyond a point at which the class preceding leaves it." The several classes are as follows: 1. General science. 2. The mathematical sciences. 3. The inorganic sciences. 4. The organic sciences. 5. The historical sciences. 6. The social sciences. 7. The spiritual sciences. 8. Personal science. The classification of books being always to a certain extent arbitrary, there does not seem to be any serious objection to the foregoing arrangement, although it would have been, perhaps, better to have placed what Professor Lesley calls the historical sciences last and under the title history, while personal science, which here means biography, might properly have been made a subdivision of history. This, however, is a small matter. When we come to the arrangement of the titles under each subdivision, there is perhaps more room for criticism. The compiler makes the singular assertion that "in consulting a catalogue for a book, perhaps the most natural reference first made is to the time of its appearance."

#### THE MERCANTILE LIBRARY.

The Mercantile Library of Philadelphia was organized in 1821, by a small number of energetic men of the class from which it derives its name. Its development, though slow at first, has increased in a constantly accelerating ratio until it has attained the highest rank among self-sustaining libraries; for though of late there have been some few donations and bequests, self-dependence is the essential basis of its life and strength.

There have been but two occasions in its history when any portion of the board have failed of re-election, the last of which was in 1860, when, after a very warm contest, a sufficient infusion of new blood entered the board to give it the tone and character which it has since had.

It has been the policy of this new board to diffuse the benefits of the library to the widest possible extent, and in pursuance of this general idea it may be stated as one peculiarity of this institution, distinguishing it from all other large collections, that the books, which are arranged by subjects, stand in open cases, just as accessible to members as their own private libraries. The rooms are open 365 days in the year, and ordinarily from 7½ a. m. to 10 p. m. Books are delivered at the residences of members on payment of the sum of 5 cents. Books not already in the library are always purchased on the application of members, unless they should be of an immoral tendency or otherwise specially objectionable.

The same policy has governed the board in regard to the general supply of books, it being considered advisable to purchase good books that will be read in preference to good books that will not be read. For instance, scientific books adapted to popular reading are added in much greater proportion than similar books intelligible only to the adept in

science, and thus the capacity to comprehend the latter class of books is developed which in a large proportion of cases would have lain dormant. This mode of educating has, it is believed, been successful in a most gratifying degree, for the character of the books most in demand has been steadily rising to a higher plane of excellence. At one time, very many years ago, this institution was looked to mainly for a supply of light reading, but the mere fact that it now contains over 125,000 volumes 90 per cent. of which cannot in any proper sense come within that designation, shows how unjust it would be to the collection itself and to the management to place it among the libraries for light reading now.

In the department of bibliography it may be called strong, as it possesses some 4,000 volumes of that class. To show its growth in this respect, it may be mentioned that in 1863 there was no class so denominated, and had there been it would have contained but portions of two works. No copy of Lowndes, Watt, Brunet, Peignot, Panzer, or any of the other lights of the science was to be found on the shelves. Now, however, in addition to all these authors, it possesses every work cited by Allibone as an authority, nearly all those recommended by Guild's Librarian's Manual, and Horne's Manual of Bibliography, together with a valuable collection of priced catalogues, both foreign and American, and a large number of other important works, including all the recent ones of merit. In the department of rare Americana it has made no attempt at completeness, for the reason that that department of literature is well cared for by the Philadelphia Library and the Historical Society; besides, the mania existing on the subject by private collectors has had the effect of putting the market price far beyond the intrinsic value of the books on this subject.

The library possesses nearly every edition of the letters of Junius and of writings on the subject of their authorship or in any way connected with it, including all the known writings of the various persons to whom the authorship has been attributed.

It would take up too much space to name, individually, the many rare and valuable works which it possesses; suffice it to say, that the Mercantile Library has some 20 or 30 volumes printed in the fifteenth century; a long series of Philadelphia newspapers, commencing with the year 1740; a great number of books and pamphlets printed in Philadelphia and other American towns in the colonial days; a copy of Audubon's Birds of America; a very fine copy, believed to be the finest in existence, of Wilson's American Ornithology; a copy of Peale's Stone Age, privately printed and exceedingly valuable; a copy of the first Anglo-Saxon printed book; a copy of the first book printed in Glasgow, in Bristol, and in some two hundred other places.

Its yearly income from ordinary sources is about \$45,000, only \$918 of which are derived from endowments, the remainder being received from the members. Its real estate is worth about \$250,000, and the indebted-

edness thereon is under \$40,000. It has a front of 96 feet on Tenth street and a depth on Marble street of 301 feet, the building extending the entire length, and covering an area very much larger than any other library in America.

The reading rooms are supplied regularly with over 500 magazines, reviews, and newspapers, representing every State and Territory in our own country and the leading nations and colonies with which we have any commercial intercourse.

The terms of membership, including the entire privileges of the institution, are the purchase of a share of stock at \$10 and the payment of an annual fee of \$4, or a life membership for \$40. Visitors are at all times cheerfully admitted, but to use the rooms an introduction is needed; any member has the privilege of introducing strangers for thirty days without payment from either party.

No new buildings are in contemplation, as by economizing the space already possessed it is believed 500,000 volumes can find safe and conveniently accessible lodgment.

The following table will exhibit the condition of the library at the end of each decennial period since its foundation and at the close of 1874:

| Year ending<br>December 31. | Total income. | Total cost of<br>reading mat-<br>ter. | Number of<br>members. | Volumes add-<br>ed. | Volumes in li-<br>brary. | Circulation of<br>books. | Newspapers<br>received. | Periodicals re-<br>ceived. | Visits to the<br>library. |
|-----------------------------|---------------|---------------------------------------|-----------------------|---------------------|--------------------------|--------------------------|-------------------------|----------------------------|---------------------------|
| 1830.....                   | \$1, 123 15   | \$614 11                              | 490                   | 402                 | 3, 320                   | 8, 430                   | 13                      | 4                          | .....                     |
| 1840.....                   | 3, 527 19     | 716 90                                | 761                   | 516                 | 6, 434                   | 14, 690                  | .....                   | 11                         | .....                     |
| 1850.....                   | 6, 186 69     | 879 07                                | 1, 474                | 600                 | 13, 149                  | 28, 000                  | .....                   | 43                         | .....                     |
| 1860.....                   | 11, 351 19    | 4, 185 48                             | 2, 165                | 2, 525              | 21, 500                  | 87, 500                  | 37                      | 52                         | .....                     |
| 1870.....                   | 32, 751 18    | 9, 538 54                             | 6, 577                | 7, 136              | 56, 438                  | 148, 961                 | 226                     | 150                        | 339, 900                  |
| 1874.....                   | 45, 800 13    | 21, 387 55                            | 11, 276               | 17, 004             | 109, 943                 | 237, 341                 | 335                     | 168                        | 501, 621                  |

The number of volumes now in the library is 125,668, and the rate of increase is from 1,000 to 1,500 volumes a month exclusive of donations.

There have never been any large gifts of books, the largest having been a recent contribution of some 2,000 volumes from James G. Barnwell, for many years a member of the board, to whom the writer is indebted for this sketch of the library. With the exception of public documents from the Government, no other gift ever reached 200 volumes.

#### THE UNIVERSITY OF PENNSYLVANIA.<sup>1</sup>

I am indebted to Prof. R. E. Thompson, librarian of the University of Pennsylvania, for the following interesting account of the valuable library of that institution.

The library of the university, like that of all our higher institutions of learning, dates from the very beginning of the institution itself, which

<sup>1</sup> See College Libraries, Chapter III, pp. 116-118.

was established as an academy in 1749, chartered as a college in 1755, and as a university in 1778. The various parts of the collection in some degree reflect the history of the university itself.

The oldest part is made up of gifts from the early trustees and other public spirited citizens. Especially, the elder Richard Peters gave very liberally, as may be seen from his autograph on a multitude of title pages. Others bear the autograph of Benjamin Franklin. The gifts of Mr. Peters are very largely historical and theological works by non-jurors, but many are standard works by the older historians and divines. A copy of the Baskerville Barclay's Apology, presented by Barclay's son, and one of the Baskerville Virgil, subscribed for by the university itself, are in the library.

Dr. Smith, the provost, visited England in 1762, with a view to the increase of the endowment, and his visit is commemorated by the presence of the works of many divines, historians, and men of science then living. But the largest gift from abroad was that which the ill-fated Louis XVI sent at the instance of General La Fayette. It consists of French works on the natural sciences, history, and classical antiquities, with the old Paris edition of the Byzantine historians, (incomplete.)

From the war of independence down to our own days but few additions were made to the library, and those mostly by presents from authors and publishers. Dr. Thomas Hartwell Horne acknowledged the honor of his doctorate in divinity by a splendid uniformly bound edition of his works; and Carey, the great Baptist missionary, presented a number of Oriental works, including his own "Sungskrit" Grammar.

The first of the great additions to the library was made by the family of the late Stephen Colwell, who, in fulfilment of his own purpose, presented his collection of works on social science and political economy, some 8,000 volumes. This collection is certainly unique in its completeness, at least so far as any in America can be compared with it. It includes almost every important book, pamphlet, or edition of either on the subject, that appeared down to Mr. Colwell's death, in 1869, in English, French, or Italian, besides many in German and Spanish. The collection of pamphlets on the theory of money and the practice of banking is especially complete, and many of them are not to be had at any price, or to be seen in any other American collection. The great French periodicals, the French and Italian collections of economists, the French dictionaries, encyclopædias, with the most important blue books of the English and official reports of the continental governments, are all in their places.

This library was given to the university just after the removal to West Philadelphia, and almost simultaneously the library of Professor Allen was purchased by the joint act of the trustees and the alumni. This contains first of all a large and very carefully selected body of authors in the department of classical, especially of Greek philology

The great Bibliotheca of Didot, and the magnificent Paris edition of the Thesaurus of Stephanus may be regarded as the stem of the collection, around which are grouped the finest editions, introductions, philological helps, that English, German, and French scholarship offers. Their selection has been the life-long task of the university's revered professor of Greek, and a labor of love to him.

Supplementary selections in the Allen Library, are (1) that of the modern Latinists, including especially the Italian and Dutch poets, with some of the patristic and mediæval authors; (2) a collection of bibliographical works, catalogues, and manuals, including nearly complete collections of the works of Peignot and Nodier, and, of course, very fine subscription copies of Brunet and Graesse; (3) the Shakspeare library, including all the finest editions and annotated translations, (Delius, Schlegel and Tieck, the Malone variorum edition, etc.,) with the best commentaries, English and foreign, (Ulrici, Gervinus, the Jahrbücher der deutschen Shakespeare-Gesellschaft, etc.,) and works on general English philology; (4) a collection of works on military subjects, by the chief English, French, and German authorities.

Besides this purchase, the trustees also appropriated funds for the purchase of (1) a sufficient collection of historical works, both native and foreign; (2) a collection of the standard English poets, and of works that illustrate and assist the study of the modern languages, (Grimm's Wörterbuch and the like,) and such books as were especially needed to supplement the existing collections on related subjects, (the publications of the Early-English Text Society, and other English philological works;) also a collection of books on metaphysical and moral science, including the works of the great German philosophers Hegel, Fichte, Schelling, etc. A further addition to the resources of the library has been made by the family of the late Tobias Wagner, which has given property to create a Wagner fund yielding an annual revenue of \$600 for the purchase and binding of books. Other recent gifts: (1) A large collection of works on French, English, Scotch, and civil law, (including the great French jurisconsults, the French code, English state trials, the Pandects, etc.,) from the library of the late Judge Bouvier, presented by his son-in-law, Dr. Peterson; (2) a number of very valuable historical works, chiefly French and Italian, and largely on the history of art, presented by Prof. Alfred Stillé. Not yet complete, but not inferior to any other gift made to the library, is the Rogers library of engineering, presented by Prof. Fairman Rogers in memory of his father. It will consist of some 5,000 volumes on this single topic, many of them of a highly costly, because voluminous and elaborately illustrated, class of works. Of some it may be safe to say that there is no other copy in America. The library contains about 20,000 volumes, which are accommodated in a spacious and well lighted room with shelves for about 30,000 volumes. Each of the college societies, the Philomathean and Zelosophic, has a library of some value. Together they number 2,326 volumes.

## LIBRARY OF THE FOUR MONTHLY MEETINGS OF FRIENDS.

This Quaker library, originating in a bequest made by Thomas Chalkley, in 1742, of a small collection of books to the Society of Friends, now contains about 8,000 volumes. It is valuable as furnishing the most complete collection in America of the ancient writings of the Quakers. The library is free to all members of the orthodox branch of the society, and to others who bring a satisfactory reference.

## PHILADELPHIA ATHENÆUM.

The Athenæum was founded in 1814 by about one hundred subscribers who united to start a reading room for periodicals and newspapers. It was kept in the rooms belonging to the Philosophical Society, in Fifth street, until 1847, when the present luxurious quarters, on Sixth street below Walnut, were occupied by the association. The reading rooms are two large apartments in the second story, one appropriated to books and periodicals and the other to newspapers. Between the two is a smaller room devoted to chess, whither daily resort some of the best players in Philadelphia.

The library contains about 20,000 volumes, largely of bound volumes of magazines, the current numbers of the leading periodicals being spread upon the tables for the use of members. The collection increases slowly, the income of the institution of late years having been largely devoted to paying off the indebtedness on the building. This has been nearly accomplished, and the future prospects of the Athenæum are good.

FRIENDS' FREE LIBRARY AND READING ROOM,<sup>1</sup> (GERMANTOWN.)

This library, situated in the corporate limits of Philadelphia, had its origin many years ago in a small collection of books belonging to the venerable Friends' Meeting, in Germantown. It was thrown open to the public in 1869 with a collection of about 2,700 volumes. This has been since increased to about 7,000 volumes. In 1874 a fine hall was erected on the meeting house property at a cost, borne mainly by Alfred Cope, of about \$17,000, where it is now open to the public.

Works of fiction are excluded and the moral tone of others assured before placing them on the shelves. It is not found that many make the want of light literature a reason for not frequenting the library. About 500 persons use the library, there being a weekly average of about 270 visitors, many of whom make use of the reading room. The workmen from the numerous factories in Germantown resort freely to the library, which offers a counter attraction to the taverns of the village. The library and reading room are open to all free of cost, the institution being kept up by voluntary contributions.

LIBRARY OF THE COLLEGE OF PHYSICIANS.<sup>2</sup>

This fine collection of medical and scientific works, founded in 1789,

<sup>1</sup> See article on Free Libraries, Chapter XVI, p. 394.

<sup>2</sup> See article on Medical Libraries, Chapter VI, p. 174.

is contained in a neat fire proof building at the corner of Thirteenth and Locust streets. It numbers about 19,000 volumes, and is increasing at the rate of 1,000 volumes per annum. It is rich in general works of medical literature, and especially in French and German journals; and it possesses, by the bequest of the late George Ord, the best and largest collection of English and French dictionaries in this country.

#### LIBRARY OF THE PENNSYLVANIA HOSPITAL.<sup>1</sup>

This collection was commenced in 1763, and now contains 12,500 volumes, many of which are rare. The annual expenditure for books and binding has averaged during the last ten years \$595.19, the annual increase in volumes being about 275. Books may be borrowed by subscribers, (who pay \$3 a year,) or those who acquire a life right, either by purchase (\$28) or gift from the managers, these beneficiaries being chiefly formerly resident physicians, to whom it is customary, on leaving, to give the use of the library of the hospital. In 1857 was published an admirable Catalogue Raisonné, prepared by Dr. Emil Fischer, with an alphabetical index of authors.

"The two great libraries," says Dr. Richard Dunglison, "of the Pennsylvania Hospital and the College of Physicians, would, if combined, form a very remarkable library collection, embracing works in every department of medical literature and the kindred sciences. A comparison of the library catalogues of the two institutions exhibits a surprising absence of duplication. If any action looking to their consolidation should ever take place, Philadelphia would possess a magnificent medical library, far surpassing in value and resources that of any other cis-Atlantic city." It may be added that the Philadelphia Hospital (almshouse) contains a library of about 3,000 volumes, and the nuclei of other libraries may be found in several of our medical institutions.

#### LIBRARY OF THE GERMAN SOCIETY CONTRIBUTING FOR THE RELIEF OF DISTRESSED GERMANS IN THE STATE OF PENNSYLVANIA.

This society, primarily one of benevolence, was incorporated in 1764. Its library, begun in 1817, is about equally divided between books in the German and English languages, and contains 16,000 volumes. Members of the German Society, or their widows, and "reading members," the latter paying \$4 a year, are entitled to use the library and to take the books home.

A separate collection, commenced in 1867, of works on the early colonization of Pennsylvania, and on German-American life in general, also of early German pursuits, is being made by Dr. O. Seideusticker, under the auspices of the society. It is under the same roof as the general library.

#### ACADEMY OF NATURAL SCIENCES OF PHILADELPHIA.<sup>2</sup>

The formation of the library of the Academy of Natural Sciences of

<sup>1</sup> See article on Medical Libraries, Chapter VI, p. 174.

<sup>2</sup> See article on Scientific Libraries, Chapter VII, p. 185-186.

Philadelphia was begun with the society in March, 1812. The first books were presented by the founders of the institution, and its growth is due to the bounty of intelligent and benevolent persons.

In 1836, when a catalogue was printed, the library contained 674 folio, 1,595 quarto, 3,723 octavo, and 898 duodecimo volumes, in all 6,890, and 435 separate maps and charts. Of these 5,232 volumes, and most of the maps and charts, were presented by William Maclure, many of them between the years 1816 and 1820, but the majority of them in 1835.

In accordance with his verbal bequest, Mrs. Thomas Say presented, in 1834, her husband's entomological library of 100 volumes.

In May, 1845, the late Dr. Thomas B. Wilson presented Owen's History of British Fossil Mammalia and Birds. From that date till December, 1849, he had deposited 2,773 volumes, periodicals, serials, and pamphlets. These were then presented to the society on condition that their use should be restricted to the hall of the academy. From that time until Dr. Wilson's death, March 15, 1866, his donations exceeded 8,800 volumes and pamphlets. They included nearly all of the most elaborate and costly works on natural history and scientific travel published within that period, as well as many valuable and rare works for which catalogues of second-hand books were carefully examined. He also spent large sums on binding and in altering the academy's building for the accommodation of the books. In his last will he provided an annual income of \$300 to defray the cost of continuation of expensive serials, and an equal sum for the salary of a librarian.

Between the years 1850 and 1857 Mr. Edward Wilson presented 4,184 works. This collection is particularly rich in rare pamphlets and publications of the last century.

Among the valuable specialties of the library is an extensive series of periodical publications of scientific societies throughout the world, received generally in exchange for those of the academy. It includes a complete set of the Transactions of the Royal Society of London, commenced in 1665, and still continued. Among the admirable books are the elephant folio edition of Audubon's Birds of America, a gift by nine members of the society; a complete series of the works of John Gould on birds and mammals, folio editions, beautifully illustrated; Elliot's ornithological monographs, including his superb works on pheasants and birds of paradise. The work on pheasants is perhaps the most elegantly illustrated work on descriptive natural history ever published; the plates were designed and drawn by Joseph Wolf, and colored by hand in the highest style of art; Wolf's Zoölogical Sketches, illustrated; Sonnini's edition of Buffon, 127 volumes; The Flora of Austria, five folio volumes, illustrated by the process known as nature printing; The Ferns of Great Britain and Ireland, illustrated in the same manner.

At the close of 1871 the conchological department of the library contained, with one or two exceptions, every work on conchology published

APPRENTICES' LIBRARY.

up to that date. It then numbered 807 titles. The perfection of this collection is due to the generosity of Mr. George W. Tryon, jr., who gave to it the very valuable library on this subject which he had formed.

There is a valuable collection of illustrated works on Roman, Greek, and French antiquities, among which are all those of Piranesi.

In 1868 the number of volumes in the library was ascertained to be 21,964. The library now numbers about 30,000 volumes and 35,000 pamphlets.

The books are kept in cases with glazed doors, without locks. There is a manuscript catalogue of each division to be found in one of the cases containing the works named in it. A general card catalogue has been prepared.

The library is open from 10 a. m. to 10 p. m., daily, Sundays excepted, and may be consulted freely by any respectable person. It is maintained exclusively as a library of reference.

Recently, Mr. I. V. Williamson has settled upon the institution \$1,500 a year, to be expended in the purchase of scientific books, and for no other purpose. It is believed that this sum will be sufficient to procure all the publications which relate to the natural sciences as they appear, and maintain this in the front rank of special libraries. Mr. Williamson has in this gift conferred an inestimable benefit on the votaries of natural science in Philadelphia, and fixed his name in grateful remembrance more enduringly than it could be in marble or bronze, and far more usefully.

#### LAW ASSOCIATION.

This institution, founded in 1802, and supported mainly by subscription, but partly by a tax on certain writs, is situated at the corner of Sixth and Walnut streets. The library possesses complete sets of the reports of the several States and of the United States, as well as those of Great Britain, and its collection of the pamphlet or annual laws of the different States is nearly complete. In the other departments it is also strong. The library numbers 8,500 volumes.

#### APPRENTICES' LIBRARY.

This is a free library, founded in 1820, and containing about 21,000 volumes. It is used by 2,000 boys and girls. Persons over twenty-one years make a deposit of \$2. The library increases at the rate of about 1,000 volumes a year. It is supported by voluntary contributions.

#### FRANKLIN INSTITUTE.

This institution was founded in 1824 for the promotion of the mechanic arts. Its library, numbering 16,000 volumes, contains complete sets of the American, British, and French patent publications. The work which the institute has done during the past fifty years in the scientific education of mechanics is an important one, and its future

promises even more usefulness than its past. The society made a profit of about \$50,000 from its last exhibition, out of which an appropriation of \$5,000 has already been made for the library.

#### SOUTHWARK LIBRARY.

This is a circulating library, supported by subscriptions of \$1 per annum. It is in a flourishing condition, and already contains over 10,000 volumes.

#### HISTORICAL SOCIETY OF PENNSYLVANIA.<sup>1</sup>

The Historical Society of Pennsylvania was organized December 2, 1824. It met for nineteen years in the hall of the American Philosophical Society, and had the use of a small closet therein to contain its books. In the year 1844, the society removed to a room in the second story of house No. 115 (now 211) South Sixth street. Its collection then amounted to about 60 volumes, in addition to some boxes of public documents received from the Government at Washington, which had not been opened, as the society had no place in which to put the books. Immediately after the removal the library increased rapidly, and it became necessary to provide other quarters, which was done by renting a room in the then new Athenæum building, at the southeast corner of Sixth and Adelphi streets, in which the books were placed October, 1847. In 1849 the number of volumes in the library amounted to about 1,700. In the year 1871, in view of the growing demands for greater accommodation for its library and other collections, and for a sphere of action sufficiently enlarged to meet the wants of a community that showed an increased interest in its labors, the society adopted measures that seemed to them to be calculated to effect the desired end, by removing the following February to their present abode, No. 820 Spruce street, which they had improved to better answer their purposes. In addition, it contains two fire-proof rooms for the greater security of the most valued treasures. The library at present contains about 16,000 bound volumes, over 30,000 pamphlets, and 224 bound volumes of manuscripts.

The manuscripts of the Penn family were purchased in 1871 through the contributions of some of the members, and presented by them to the society March 10, 1873. Commencing as early as 1629, 74 volumes are now arranged and bound; the whole, when completed, may extend to 150 volumes. The official and private correspondence numbers 29 volumes, beginning with the year 1654 and extending down to 1835, of which only two volumes are of a date subsequent to the Revolution. Fully three-fourths of the matter comprised in them relate to Pennsylvania and the adjoining States. The papers on Indian affairs possess great interest, and embrace 7 volumes, extending from 1687 to 1772. One of the volumes contains the original certificates of the delivery of

<sup>1</sup>See article on Historical Societies in the United States, Chapter XIII, pp. 365, 366.

two beaver skins annually, on the first day of January, by the proprietaries at Windsor Castle; for this was the tenure by which Pennsylvania was held of the crown. These are complete from the years 1752 to 1780, inclusive. In the numerous petitions to the king and the proprietaries, many thousands of names of the early settlers of Pennsylvania are found, written between the years 1681 and 1765, of which about 2,000 are in the German language.

The society possesses manuscript copies of the records of births, marriages, and deaths of the Society of Friends in Chester and a portion of Delaware County. These are much consulted, particularly by those engaged in genealogical researches, and possess the value of being made from the originals and only here-brought together, and it is hoped that by the liberality of a few members copies of such records of all the meetings in Pennsylvania and the adjoining States may be obtained. Among the manuscripts may also be mentioned the Logan Papers, in 5 volumes, from 1694 to 1802; the Shippen Papers, 5 volumes, 1747 to 1790; the Potts Papers, 2 volumes, 1766 to 1780; Watson's Collections and Annals, 2 volumes; besides 29 volumes relating to the colonial history of Pennsylvania, and 24 volumes to the Revolution—all original documents. In addition, there is an extensive collection of unbound manuscripts, not yet arranged.

In the library is a book in the Amharic language, written on vellum, size 3 by 3½ inches, containing 42 pages, formerly the property of King Theodore of Abyssinia, taken by an English officer, and presented by one of the surgeons in the expedition. The society possesses a copy of the first Episcopal prayer book printed in New York in 1710, believed to be unique.

In documents relating to the first French Revolution it is believed to be the most complete in the country, the collection having been made by the late William Maclure during his residence in that eventful period in Paris, and numbering 1,793 volumes. In works relating to the Moravian Church and its history the library is also rich, containing on this subject 335 volumes. The publications made by the society now number 15 octavo volumes, chiefly relating to the history of Pennsylvania, besides 2 volumes of addresses. All the collections of the historical society, except about 300 volumes, have been the gifts of members and a few others.

#### OTHER COLLECTIONS.

Scattered over the length and breadth of Philadelphia are many other institutions possessing libraries, some of which number many thousand volumes, more or less accessible to the public.

Each of these in its way is a centre of light and education to the surrounding population. But it is clear that the multiplication of small libraries does not make up for the absence of one great library where the scholar, the professor, the editor, the author, the man of science, and the man of affairs, may each be reasonably sure of finding any book he

wants. Fortunately the nucleus of such a library already exists in the combined Philadelphia and Loganian Libraries. What is still wanted is an adequate endowment. A first class library is an expensive thing, but it is indispensable for the higher education. The workman is helpless without his tools. A circulating library is one thing and a library of reference is another. They need not even be in the same building. Philadelphia, as I have shown, is well supplied with circulating libraries. What it now wants is a library of reference, like the British Museum, and the other government libraries of Europe, or even like Bates Hall and the Library of Congress. If they were in a fire-proof building, it cannot be doubted that the Philadelphia and Loganian Libraries would receive gifts and bequests, as well of money as of the private libraries of collectors; who, as a class, naturally shrink from having the toilsome accumulations of a lifetime dispersed under the auctioneer's hammer.

The following list embraces such of these libraries as number more than 1,000 volumes each :

|   | Volumes. |
|---|----------|
| Academy of Notre Dame.....  | 5,000    |
| American Sunday-School Union.....   | 3,200    |
| Baptist Historical Society, (see Chapter XIII, p. 363, Historical Societies)..... | 9,315    |
| Broad Street Academy.....   | 3,500    |
| Brotherhead Library.....  | 35,000   |
| Burd Orphan Asylum.....   | 4,350    |
| Byberry Library.....  | 2,250    |
| Carpenters' Company of Philadelphia.....  | 3,602    |
| Catholic Philopatrian Literary Institute.....                                     | 2,000    |
| Central High School.....  | 1,000    |
| Christ Church Hospital.....   | 1,000    |
| Christ Church Library.....  | 3,500    |
| Christian Hall Library.....   | 3,000    |
| Fifth Ward Grammar School.....  | 2,000    |
| George Institute.....   | 1,838    |
| Girard College.....   | 5,000    |
| Grand Lodge of Pennsylvania, Free and Accepted Masons.....                        | 1,500    |
| Hahnemann Medical College.....  | 2,000    |
| Hospital of the Protestant Episcopal Church.....                                  | 2,849    |
| House of Refuge, (colored department).....  | 1,450    |
| Institute for Colored Youth.....  | 2,959    |
| Institution for the Deaf and Dumb.....  | 5,000    |
| Kensington Institute.....   | 1,800    |
| Keystone Public Grammar School.....   | 2,217    |
| La Salle College.....   | 5,000    |
| Library and Reading Room Association, Twenty-third ward.....                      | 2,000    |
| Lincoln Institute.....  | 1,200    |

| Germanatown Library Company .....                          | 2,400    |

## IX.—PUBLIC LIBRARIES OF ST. LOUIS.

BY JOHN JAY BAILEY,

*Librarian of the St. Louis Public School Library.*

## ST. LOUIS MERCANTILE LIBRARY ASSOCIATION.

On the evening of December 30, 1845, eight gentlemen devoted to mercantile pursuits met to initiate measures for the establishment of a library association. A committee was appointed to draft a constitution, which was adopted, and a board of directors chosen in accordance with its provisions at a meeting in Concert Hall, January 13, 1846. February 2, 1846, cash collections amounting to \$1,809.25, and subscriptions to the further amount of \$498, were reported. Rooms were shortly afterward obtained on the northeast corner of Pine and Main streets. Josiah Dent was elected the first librarian of the new library, and on the 9th of April, 1846, it was opened to the public.

At the close of the year 1846 the library contained 1,689 volumes; it numbered 283 members; it had issued during the year 720 volumes; its cash receipts had been \$2,689.92; the property acquired was valued at \$1,954.35.

In September, 1846, the library was removed to more spacious quarters, at Nos. 110 and 112 Glasgow Row, Fourth street.

The association was incorporated by act of the legislature February 16, 1847.

Mr. James E. Yeatman, first president of the association, has been, from the first, among the most effective promoters of the success and

growth of the Mercantile Library. He was succeeded in 1848 by Mr. Alfred Vinton, who held the office two years. To him the library is indebted for many costly gifts, which are esteemed to this day among the most valued treasures of the association. It was he who first urged upon the members of the association and the citizens generally the gradual establishment of a building fund, to be in time applied to the erection of a permanent home for the library.

During the year 1850, the sum of \$1,012 was secured for the building fund in various donations made by several individuals. In January, 1851, Mr. H. E. Bridge, then president, proposed the organization of a stock company, distinct from the library association, for the sooner carrying out of the desired end. Such a company was formed at once. It was incorporated February 17, 1851, under the title of the Mercantile Library Hall Company of St. Louis, with authority to issue stock, in shares of \$10 each; to purchase a lot and erect thereon a building for the library—the library association to be permitted to occupy such building free of rent, upon their defraying all expenses for taxes, insurance, and repairs, and further paying to the Hall Company 6 per cent. annual interest upon the stock held by the Hall Company. The company was required to transfer the premises, in fee simple, to the library association, as soon as the latter should have become possessed, by purchase or otherwise, of the entire amount of stock issued by the former. Stock was issued by the company, from time to time, to the aggregate amount of \$100,000. A lot, 115 feet by 127, was purchased for \$25,500, on the corner of Fifth and Locust streets, and a building erected, covering the entire lot, and four stories in height. It is built of red brick, with cut stone facings, in the Italian style of architecture, and was considered, at the time of its erection, one of the finest ornaments of the city. The first story, 14 feet high, is rented out in stores; the second, 20 feet 6 inches in height, is now entirely occupied by the library; the library room being 80 feet by 64, and the adjoining reading room, at first and for many years used as a lecture room, being 80 by 44 feet. The third story, used for a public hall, is 105 by 80 feet, and 33 feet 6 inches high. The lot and building cost \$140,000. The library association has for some years been in possession of the entire amount of the stock of the Hall Company, (a large portion having been donated or exchanged for life memberships,) and is consequently absolute in its ownership of the premises. The name of Henry D. Bacon should not be omitted in the present account, as it was mainly through his liberality that the enterprise was rendered successful. He took shares of stock to the amount of \$20,000, and at a critical moment, by an additional advance of \$10,000, enabled the company to continue its operations.

On the 23d of January, 1854, the building was so far completed as to permit the removal of the library into the rooms devoted to its use. On the 17th of October of the same year, the edifice was entirely finished. The statistics for the year ending January 1, 1854, (the eighth

year of its existence,) show that the library contained 10,565 volumes; its membership for the year was 944; its issue of books, 9,885 volumes; its receipts, \$7,693.27; and the value of its property, \$22,756.71.

Mr. Josiah Dent, the first librarian, and Mr. William Allen, his successor, each held the office one year. Mr. William P. Curtis was elected to the position in 1848, and filled it until 1859. He prepared the first catalogue of the library (published in 1850) and a supplement to it, (1851.) The catalogue was a simple list of the books, alphabetically arranged, with full titles, and a classified index, under the general heads (subdivided into sections) of theology, jurisprudence, government and politics, sciences and arts, belles-lettres, history, works relating to America.

Edward W. Johnston became librarian of the association in 1859. His first important undertaking was the preparation of a second complete catalogue, the library then containing about 14,000 volumes. The catalogue was mainly a classified one, the alphabetical part being but a brief index of authors and the titles of anonymous books. The method adopted is the Baconian, or rather a modification of Bacon's plan for the classification of human knowledge. "It places all books, not mixing together various branches of knowledge, under three great divisions: those of history, (or the memory,) of philosophy, (or the reason, the judgment,) and of poetry, (or the imagination.) The authors who have mixed their subjects, or have written separately on more than one, are assigned to the indeterminate class of polygraphs or writers on many things." The first class is subdivided into 74 sections; the second into 120; the third into 31; polygraphs forming a section by itself.

Mr. Johnston's policy in the selection of books for addition to the library was that of filling up one section at a time, with a view to render each as complete as the resources of the library would admit. He began with English history and literature, both of which he largely enriched with the best procurable editions of the early chroniclers, poets, and other writers of note.

In 1862, Mr. Johnston was succeeded as librarian by Mr. John N. Dyer, who still holds the office.

A noteworthy acquisition, at a cost of \$1,000, in Mr. Johnston's term of office, was a copy of Audubon's *Birds of America*, text and plates complete. The copy itself is not only a very perfect one, but of unrivalled interest, through the fact that it was the author's own reserved copy, and bears in each volume of the plates his autograph attached to his bequest of it to his sister.

In June, 1872, the agitation of the question of opening libraries on Sunday being then at its height, the Mercantile Library directors decided to try the experiment. The rooms were opened on Sundays from 2 p. m. till 9 p. m., from June 9 till December 29, solely for reading and reference purposes; no books being issued for home use, and none but members being allowed access. The average attendance was found

to be 71½, and at the annual meeting in January, 1873, it was resolved that the experiment was a failure, and should be discontinued.

The library ranks to day among the most useful of the institutions of St. Louis and is a monument to the liberality and enlightenment of her citizens. It has been the recipient, from time to time, of valuable gifts of books and works of art, among which may be mentioned the Peck collection of books and pamphlets relating to America; the marble statues of Cœnone and Beatrice Cenci, by Harriet Hosmer; marble busts of Burns and Walter Scott, admirable productions, presented by the Caledonian Society of the city; a number of choice paintings and portraits; a large sculptured slab of marble from Nimroud, inscribed in cuneiform characters; all of which, with many other objects of curiosity and virtù, impart to the rooms an air of refined taste, and render them well worthy of repeated visits.

The Mercantile is essentially a class library, and must always remain such. It is the pride of the commercial community, and owes to that large, wealthy, and munificent class nearly all the success it has achieved. None but persons engaged in mercantile pursuits are eligible to active membership in the association, although ladies and professional or trades people enjoy the privileges of the library as beneficiaries.

The chief present want of the library is a new, more commodious, and fire-proof building, and the directors are already agitating the question of selling the present property and providing another and safer home for their treasures.

The following figures, taken from the directors' report for the year ending December 31, 1874, show the present status of the institution :

|  |              |
|--|--------------|
| Total number of volumes.....               | 42, 013      |
| Number of volumes added during the year :  |              |
| By purchase .....                          | 1, 225       |
| By donation .....                          | 318          |
|  | <hr/>        |
|  | 1, 543       |
| Number of new members enrolled, 1874 ..... | 606          |
| Total membership :                         |              |
| Honorary members.....                      | 18           |
| Life members .....                         | 660          |
| Proprietors.....                           | 727          |
| Clerks .....                               | 1, 511       |
| Beneficiaries .....                        | 1, 530       |
|  | <hr/>        |
|  | 4, 446       |
| Volumes issued.....                        | 132, 175     |
| Total cash receipts, 1874.....             | \$46, 505 49 |
| Receipts from memberships.....             | 12, 224 75   |
| Receipts from rent of hall and stores..... | 19, 116 80   |
| Total value of property.....               | 278, 608 68  |

During the year 1874 the third general catalogue of the library was published, at a cost of \$8,170. In typographical execution it is very handsome; in method it differs but slightly from the catalogue prepared by Mr. Johnston; the general classes are retained; the minor subdivisions are reduced in number—history contains 70; philosophy, 84; poetry, 16.

A supplement, with an index of authors, was issued in 1876, containing 4,500 titles additional to those embraced in the general catalogue of 1874.

The terms of membership in the library are as follows: For proprietors, (merchants,) \$5 initiation fee, \$5 annual dues; for clerks, (in mercantile business,) \$2 initiation fee, \$3 annual dues; for beneficiaries, (persons not engaged in commercial pursuits,) \$5 annual dues, no initiation fee; life memberships, \$50. The library rooms are open daily from 10 a. m. till 10 p. m., (Sundays excepted.) and during the summer months from 9 a. m. until 10 p. m. Once in four years the library is closed for general examination.

#### ST. LOUIS PUBLIC SCHOOL LIBRARY.

This institution is mainly indebted for its existence to Ira Divoll, superintendent of the St. Louis public schools from 1857 to 1868. Mr. Divoll entertained a deep and settled conviction that the public schools in and of themselves are inadequate to supply the youth of our country with such an education as should most thoroughly qualify them for their duties as citizens. Hence, in his view, the highest function of the public school — apart from its disciplinary side — was, first, to implant in the minds of youth a profound desire for the acquisition of knowledge; second, to point the way by which the coveted knowledge might be obtained, and third, to supply the material for gratifying the mental wants awakened by the text book education of the school. To meet these ends, one instrumentality was indispensable, the library; and to the solution of the problem how to connect the library permanently with the public schools as a part of the system Mr. Divoll bent all the energies of his fertile and practical mind. To use his own words:

There were libraries enough already for those who had ample means. Investigation showed that not 2 per cent. of the children in the public schools had access to libraries of any kind, and that probably not over 4 per cent. of them ever would have such access. It was for the remaining 96 per cent. that a new library was needed. A library for the mass of the people, and not for the favored few, must be accessible on very low and easy terms — as nearly free as possible.

January 10, 1860, Mr. Divoll submitted to the school board a plan for the establishment of a public school library. The two distinctive features of his plan were, first, that the fee for life membership should be fixed at the low figure of \$12, payable at once, or in quarter-yearly instalments of \$1; and, secondly, that the library should be inalienably connected with the public schools, and that its books should be selected with special reference to the wants of their teachers and pupils. The facility of the proposed terms of membership, he argued, would bring the library within the reach of children of the most moderate means; while its distinctive character, as an auxiliary to the public schools, would attract to its privileges pupils and teachers alike. This plan, though not acted on at the time, is nevertheless that upon which the Public School Library of St. Louis is conducted to-day.

Various circumstances from year to year prevented the school board from carrying out Mr. Divoll's plan for the establishment of the proposed library, but he never abandoned it. At last, weary of delay, the friends of the enterprise organized a Public School Library Society, which was incorporated by act of legislature February 3, 1865. By the terms of the charter, membership in the society was restricted to such as had been or might be connected in any way with the public schools, and all adult life members were to be entitled to a voice in the affairs of the library. Those affairs were to be managed by a board of sixteen trustees, of which the president of the school board was to be *ex officio* a member and the president; the superintendent of public schools and the principals of the high and normal schools were to be members *ex officio*; the remaining twelve (six of whom might be women) were to be elected by the life members of the society.

The charter granted, unsparing efforts were made to obtain means for starting the new enterprise. A number of prominent citizens lent their aid, and advanced sums of money varying from \$50 to \$250, the greater part of which were subsequently issued in life memberships, under the direction of the donors. Ward meetings were held in various school-houses, and the advantages of the proposed library laid before the people. A total sum of \$5,726.65 had been collected, when, on November 1, 1865, Mr. John J. Bailey became librarian. The sum in treasury above stated; a nucleus of 453 volumes, chiefly school text books, presented by the school board; 304 life members, and about 200 who held certificates of partial payments—such was the status of the incipient library on the 1st of November, 1865.

The sum of \$5,000 was appropriated for the purchase of books; all the large publishing houses in the United States consented to fill first orders at discounts of 40 to 50 per cent.; and about 1,500 volumes had been received and registered when the library was first opened, December 9, 1865, for the issue of books. A few rough shelves, in the session room of the school board, formed the entire accommodations of the infantile library. Early in 1866 a room in Darby's building, corner of Fifth and Olive streets, was rented at \$300 per annum. Its dimensions were 130 by 20 feet; it was divided by a glass partition into two nearly equal apartments, one of which was devoted to the library, and the other, on the 16th of October, 1866, was opened with formal ceremonies, as a reading room, well supplied with newspapers and periodicals. The end of the year 1866 found the novel experiment *un fait accompli*, as the following figures will show:

|  |             |
|--|-------------|
| Volumes in the library .....           | 9,623       |
| Life members .....                     | 493         |
| Temporary members .....                | 1,432       |
| Volumes issued during the year .....   | 31,572      |
| Cash receipts from the beginning ..... | \$15,204 95 |

The causes of this success, and the means which promoted it, may be briefly stated as follows: \*

1st. The community had need of it. It supplied a want that had long existed, unrealized until the library came to fill the void that had been vaguely felt, without being understood. Mr. Divoll's invariably wise foresight had not been at fault when he augured that the library, once established, would meet with grateful appreciation and cordial support from all classes.

2d. It was a public school library. None but persons connected (or who had been connected) with the public schools were eligible to membership in the society. True, all classes in the community were comprised in this definition, yet the teachers and pupils in the public schools naturally felt that the success of *their* library depended upon their exertions, and those exertions were put forth without stint.

3d. The personal efforts of the well wishers of the library, and of those officially connected with it, had much to do with its early progress. Influential gentlemen, at considerable cost of time, solicited subscriptions for memberships and donations—in 1866 and 1867, realizing over \$2,000. The Franklin Library Association (1,060 volumes) and the St. Louis German Institute (676 volumes) were induced to give their books to the Public School Library, certificates of life membership being issued to the leading men who had control of those institutions. The High School Library was similarly given in exchange for thirty perpetual memberships vested in the High School. The librarian paid repeated visits to all the public schools, setting before the pupils the advantages of using the library and the attractions which it offered. The juvenile department in the library had been rendered especially full by ample but careful selections of the works of the best and most popular writers for the young. Perhaps no one circumstance contributed more to the advancement of the library than the visits alluded to, and they are here mentioned as suggestions to other librarians. The exhibition of some handsome picture books, the narration of some lively stories from books in the library, will draw the children in large numbers to drink of the fount set flowing for their refreshment, and the first taste will invariably grow into a fixed thirst for literary enjoyment, rising gradually from the hasty reading of story books to the more deliberate study of literature or science. In 1866 and 1867, two exhibitions were given for the benefit of the library. They were participated in by the teachers and pupils of the public schools, and together netted over \$2,300. Courses of lectures were given, which, although the profit realized from them was very small, performed a great work in advertising the library and keeping it favorably before the notice of the public. One provision of the charter of the library society authorized the school board to appropriate \$5,000 out of the school fund for the use of the library, and this sum was given in January, 1868, it being the first and only amount the library had received from any public fund or endowment.

The original intention that the library should be owned and controlled

by the school board was never given up, but was held in reserve, to be acted on at the first favorable opportunity. On the 13th of October, 1868, the school board appointed a committee of six to consult with the trustees of the library with reference to a transfer of their trust to the school board, and the library board promptly responded. After careful deliberation, the transfer was accomplished April 17, 1869, the entire property of the library society being transferred to the school board as absolute owners of the same, conditioned that they should maintain the institution according to the intention of its founders, and should appropriate for its maintenance, in addition to its regular revenues, not less than \$3,000 per annum; and, further, that the library should be controlled by a board of sixteen managers, of whom nine should be appointed by the school board and seven elected by the life members of the library. In the subsequent revision of the regulations and by-laws of the library the last shadow of class distinction was abolished, and all persons, without discrimination, were admitted to the privileges of life membership on equal terms.

In October, 1868, the school board had purchased from the Washington University the O'Fallon Polytechnic Institute building, and into this building the library was removed the same month. The purchase included the Henry Ames Library, which had belonged to the institute, and contained about 6,000 volumes; it was accompanied by the transfer to the school board of a legacy left by Henry Ames of \$100,000 to perpetuate the Polytechnic Institute and the library connected with it. After the transfer of the Public School Library to the school board the Henry Ames Library was incorporated with it, and it has received annually \$5,900 as its share of the interest on the legacy of Henry Ames.

The first board of managers under the new régime was elected and appointed in May, 1869. Ira Divoll was elected president.

Mention has been made of three libraries that were successively absorbed by the Public School Library. In November and December, 1869, were purchased the private collections of the late Prof. E. A. Rossmässler and Dr. B. F. Shumard. The former (571 volumes) consisted of standard works on natural history; the latter (1,088 volumes) was essentially geological in its character, and in completeness, its size considered, was surpassed by few in the country. Between 1869 and 1872 a number of scientific and other societies became identified with the library; some by giving their collections in exchange for life memberships, others by paying full membership fees. The library, on its part, agreed to expend all sums so received for books and periodicals, under the direction of the societies from which they were received; and the school board allowed the societies to hold their meetings, free of expense, in the session room of the board in the Polytechnic Building. These societies are as follows:

*St. Louis Academy of Music.*—Library contains 3,500 volumes; cabinet

of natural history, filling six large double cases, deposited in Public School Library, subject to general reference, but remaining the property of the academy.

*St. Louis Medical Society.*—Total payments in cash for membership, about \$1,800, all of which has been spent in the purchase of medical works.

*St. Louis Institute of Architects.*—Thirty-three volumes of costly works on architecture exchanged for memberships.

*Engineers' Club of St. Louis.*—Eighty-three volumes given to library, and membership fees paid in addition; the cash receipts being used in subscriptions to engineering periodicals.

*St. Louis Art Society.*—Collection composed of 3 fine oil paintings, 21 engravings by celebrated artists, 10 pieces of statuary casts from the antique, and 151 autotypes. All these are on permanent exhibition in the library rooms.

*Missouri Historical Society.*—Collection of relics, pictures of buildings and portraits of distinguished persons, Indian curiosities, etc., deposited in the library, but remaining in the ownership of the society.

*Local Steam Engineers' Association and St. Louis Microscopical Society.*—The members of these two organizations pay fees which are used for the purchase of books under their respective direction.

The connection of these societies with the library gives to it strength in the community, and helps to enrich it in the several special departments which the societies represent.

The Public School Library was first opened on Sunday, June 9, 1872. It has been open every Sunday since, from 10 a. m. until 10 p. m.; the public, whether members or not, having been freely invited from the first to use and enjoy it, and the issue of books to members for home use having gone on as on week days. The experiment has proved successful to a gratifying extent. While comparatively few books are issued for home use on Sundays, the issues for library use are much larger than on week days, as may be seen by the statistics:

Average issue of books on Sundays:

|                      | Volumes. |
|----------------------|----------|
| For home use .....   | 75.0     |
| For library use..... | 194.5    |
| Total .....          | 269.5    |

Average issue on week days:

|                      |       |
|----------------------|-------|
| For home use .....   | 247.5 |
| For library use..... | 50.6  |
| Total .....          | 298.1 |

The difference in the character of the reading in the rooms on Sundays and week days is noteworthy. It shows that, while books of reference are most largely used on week days (chiefly by pupils in the upper schools in the preparation of lessons or compositions,) juvenile reading preponderates on Sundays.

During the months of March and April, 1875, a classified record was kept of the reading in the library rooms, with the following results: There were drawn on week days: novels, 227 volumes; juveniles, 408; other books, 2,026. On Sundays: novels, 91 volumes; juveniles, 799; other books, 607.

The first general catalogue of the library was published in 1870. It contains the titles of about 24,000 volumes, (including the books of the Academy of Science.) In form it is alphabetical with full titles, and classified with titles abbreviated. The system of classification is an adaptation of the Baconian plan made by William T. Harris, LL. D., superintendent of the city public schools.<sup>1</sup>

A card catalogue in duplicate (alphabetical and classified) has been kept, containing all accessions to the library since the printing of the first catalogue. In the arrangement of the books on the shelves the same method has been pursued as in the arrangement of their titles in the catalogue. The classes are divided by movable markers, and in each class the books are arranged alphabetically, no shelf numbers being employed.

In September, 1871, a collection of duplicates was formed, to contain such light reading as may be for a short period in greater demand than the library can afford to supply with a just regard for the claims of more solid literature. Books may be borrowed from the collection for one week by members of the library upon payment of an extra fee of five cents for each book. The experiment has been successful. Since the collection was formed not more than two copies of any work of light literature have been placed in the regular library, while as many as thirty copies of one work were placed in the collection of duplicates. Up to the close of the fiscal year ending May 1, 1874, the total cash receipts of the collection had been \$2,032.25; the total expenditures, \$1,989.06.

So large a sum as \$50 is seldom required in any one month to keep the collection fully up to the demand, while the income from issues and fines frequently exceeds \$80. Copies of the popular magazines have from month to month been placed in the collection, affording members an opportunity, denied them before, of taking magazines home to read. As members may draw one book from the regular library, and at the same time as many from the collection of duplicates as they choose to pay for, the small fee of five cents a week is cheerfully paid.

For several successive years efforts were made to obtain the passage of a State law in Missouri authorizing the establishment and maintenance of public libraries at public cost. Despairing, at last, of the attainment of any general law for the purpose, a special act for St. Louis was passed March 27, 1874, as follows:

The board of president and directors of the St. Louis public schools is hereby authorized to appropriate, out of its annual income, for the maintenance of a public

<sup>1</sup>For a description of this catalogue see Chapter XXVIII, pp. 660-662, Catalogues and Cataloguing.

library and reading room, with or without branches, which shall be free for purposes of reading and reference, under such rules and regulations as said board may from time to time prescribe, such sum as in their discretion may be proper.

Under this act, the school board, in June, 1874, voted to the library \$6,000 for the current fiscal year; and the annual revenues of the library became as follows: School board appropriation, \$6,000; interest on Henry Ames legacy, \$5,900; income from memberships, fines, etc., \$5,000; total, \$16,900.

In June, 1874, the library was thrown open to the public, free for reading and reference, the membership fees being retained unaltered for such as desired to borrow books for home use. It may here be stated that the membership fees have increased rather than diminished under the operation of the change. None of the members, so far as ascertained, have ceased their payments, while many, first attracted to the free library, have, after a time, paid membership fees for the privilege of taking home books which they lacked time to read during library hours.

The library is deposited in the Public School Polytechnic Building, a granite edifice four stories in height, and covering a lot of ground 110 by 130 feet. The offices of the school board and a branch high school and normal school are also in the building. The library occupies the entire second floor. The library room is 60 feet by 80, and 33 feet high. The reading room, adjoining, is 100 feet by 50, and 42 feet 6 inches high.

The present condition of the library is shown by the following statistics from the annual report for the fiscal year ending May 1, 1875:

|   |             |
|---|-------------|
| Volumes in library, (including the collection of the Academy of Science and the collection of duplicates) ..... | 38,758      |
| Number of newspapers and periodicals in reading room .....  | 251         |
| Life members .....  | 2,276       |
| Perpetual memberships .....   | 30          |
| Temporary members .....   | 3,519       |
|   | <hr/>       |
|   | 5,825       |
| New members registered, 1874-'75 .....  | 1,395       |
| Issues :  |             |
| For home use .....  | 93,140      |
| For library use .....   | 28,061      |
|   | <hr/>       |
|   | 121,201     |
| Value of property, (estimated) .....  | \$72,127.31 |

To the entire number of volumes in the library proper novels bear the proportion of 19.3 per cent.; juveniles, 10.7 per cent. The average circulation for home use shows 52 per cent. of novels, 26 per cent. of juveniles. It has been determined that an annual expenditure of \$600 will supply the library abundantly with novels, and \$250 with juveniles, no matter how large the total amount the library may be able to spend for books.

#### ST. LOUIS LAW LIBRARY ASSOCIATION.

This library was founded in May, 1838, by members of the St. Louis bar. Its conditions of membership and use are that the applicant shall

be in good standing at the bar, shall pay an initiation fee of \$20, and an annual subscription of \$10. The books are not allowed to leave the room except to be taken to some court of record for use in lawsuits. Without endowment or support from any public fund, this library has become one of great value. It contains about 8,000 volumes, of which 1,500 are text books, the best having been selected; 1,500 reports and digests of foreign cases, and 5,000 reports and digests of United States courts. The library is in the county court-house, and is used by 380 members.

#### ST. LOUIS UNIVERSITY LIBRARY.

The university library contains 17,000 volumes, exclusive of students' society libraries, which number 8,000 volumes. The main library, which is intended for the use of the professors, but to which any inquirer is always made welcome, contains very complete collections of the early writings of the Catholic Church, such as the works of the Fathers, treatises on the canon law, and ecclesiastical history. Several works in the collection are unique in our country. The library possesses some illuminated mediæval manuscripts, numerous rare and original editions of the Bible, and fine collections of the classic writers, as well as of the modern historians and theologians. It was begun in 1829 by some priests who came hither from Belgium, bringing a small collection of books with them, to which additions have been made from year to year from the funds of the university.

#### ST. LOUIS ACADEMY OF SCIENCE.

The academy was organized in 1856, Dr. George Engelmann being elected president. In April Dr. C. A. Pope offered "the free use of the cabinet hall and other rooms suitable for the purposes of the academy, in the Dispensary Building of the St. Louis Medical College," which offer was gratefully accepted. The academy was incorporated by act of legislature January 17, 1857. Through the influence and efforts of its early presidents and secretaries, it was soon placed on a good footing with similar institutions, and valuable donations of books and transactions of other societies, as well as gifts and exchanges of specimens, gave it a respectable beginning of a library and museum. In 1869 it lost most of its collections, aside from its library, by fire. An agreement was shortly after entered into between the academy and the St. Louis board of public schools, by which the former has since held its semi-monthly meetings in the session room of the latter, and the library and the remains of the cabinet have been placed in the rooms of the Public School Library. Fortunately for the academy, a large and valuable collection of fossils and mineralogical specimens had, before the fire, been lent to the Washington University, and was thus preserved. The cabinet of the academy now fills three and a half large double cases, with glass doors, placed in the reading room of the

Public School Library. Their contents are the results of gifts from individuals and societies and exchanges. The library occupies an alcove in the same library room, and is accessible to users of the Public School Library for purposes of reference. The contents of the library are as follows: Bound volumes, transactions of other societies, 407; bound volumes, miscellaneous scientific works, 904; unbound volumes, transactions of other societies, 1,176; unbound volumes, miscellaneous scientific works, 257; total, 2,744.

The academy published the first number of its transactions in 1857. It has thus far published nine numbers of transactions in all, being volumes I and II and parts 1 and 2 of volume III. It has remaining on hand of these 2,670 numbers, held for sale or exchange.

#### ST. LOUIS MEDICAL COLLEGE.

The library of the college numbers 1,100 volumes. It was founded in 1844; is restricted in use to the faculty and students, and is maintained and increased solely by voluntary contributions. The library of the late Dr. Charles A. Pope (500 volumes) passed in 1875, into the possession of the college, one-half by purchase, the other half being given by his widow.

#### INDEPENDENT ORDER OF ODD FELLOWS.

This order has a library numbering 4,000 volumes, which was begun in 1868. For its support ten lodges contribute 25 cents semi-annually for each of their members, and 50 cents for each new member initiated. This gives the library a yearly income of about \$1,500. It subscribes to the leading popular American magazines, and has about 600 volumes of German works, popular and standard. The room is open daily from Monday till Friday, from 7 to 10 p. m., and on Saturday, from 2 to 10 p. m. It is accessible only to members of the contributing lodges and their families.

#### ST. LOUIS TURNVEREIN LIBRARY.

The library was begun in 1855. It contains 2,000 volumes, of which 250 volumes are English; the remainder chiefly German. The Turnverein appropriates \$20 per month for library purposes; the fines collected amount to about \$10 more. The reading room is open only two nights during the week; it is supplied with about 20 newspapers and magazines.

#### LIBRARY OF THE ACADEMY OF THE VISITATION.

The library was organized in 1832 by the Sisters of the Visitation. It contains 4,000 volumes, including every variety of literature. It is supported by the pupils, who pay a yearly fee of \$2 for the privilege of its use. The total yearly income of the library is \$150, the greater part of which is used to replace books worn out; new books are rarely added.

## LIBRARY OF THE URSULINE ACADEMY.

Begun by the Sisters in 1840, it now numbers about 2,000 volumes. The pupils pay a fee of \$2 per annum for its use, making its annual income about \$125.

## LIBRARY OF THE COLLEGE OF THE CHRISTIAN BROTHERS.

The library was founded in 1860, and contains 22,000 volumes and about 156 manuscripts. Its income is about sufficient for its support, and is derived from membership fees paid by the pupils.

## YOUNG MEN'S SODALITY LIBRARY AND READING ROOM.

This library dates from the foundation of the Sodality Building, which was built under the directorship of the Rev. A. Damen, S. J., about the year 1855. Its object, as well as that of the library rooms attached, is to furnish sound moral literature in its various branches to the members of the sodality. Lately, however, it has been made accessible to the friends of the society, who can become members by paying an initiation fee of \$1, and afterward 50 cents a quarter. To the members everything is free. The library and reading room are supported out of the general funds of the sodality. The following are some of the statistics:

Books in the library, 1,327; periodicals in reading room: dailies, 8; weeklies, 9; monthlies, 9; quarterlies, 1; total, 27. Number of members who avail themselves of the use of the library, 300. Books issued during the year ending May 1, 1875, 1,225 volumes, classified as follows: reviews, magazines, etc., 49; history, 122; biography, 172; poetry, 49; theology and controversy, 12; essays and lectures, 74; tales, sketches, and travels, 661; philosophy and physical sciences, 37; ascetic, (religion,) 49; total, 1,225.

The above figures will serve to give an idea of the classification of the books. The whole range of literature is comprised, and, while the number of books is not very large, every book is selected with care, and every subject covered by sufficient material to give the reader a pretty comprehensive insight of it. The library is intended to foster a Catholic spirit in its members, who are all Catholics.

## WASHINGTON UNIVERSITY LIBRARIES.

There are four distinct collections: The general library, containing 4,500 volumes, chiefly books of reference; the scientific department library; the law library, of 3,000 volumes; and the Mary Institute Library, of 500 reference books. Gifts from prominent citizens have assisted in their increase. The professors of the law department gave their salaries for one year to add books to the law library. Mr. Hudson E. Bridge bequeathed to the university the sum of \$100,000, the interest on which is to be divided between the chancellorship and the libraries.

The income of the latter will be about \$1,500 a year. With the exception of the law library, no great effort has been made to build up the university's collections, as the university owns several memberships in the Mercantile Library, and a large number of its pupils are similarly connected with the Public School Library; and these two public libraries supply to a great extent the wants of the university.

GERMAN EVANGELICAL LUTHERAN CONCORDIA COLLEGE.

The library of this college was begun in 1840. It now numbers 4,800 volumes.

MISSOURI MEDICAL COLLEGE.

The library of the college dates from 1840, and contains 1,000 volumes.

X.—PUBLIC LIBRARIES OF SAN FRANCISCO AND OF THE PACIFIC COAST.

BY A. E. WHITAKER.

*Librarian of the Mercantile Library, San Francisco, Cal.*

Unquestionably one of the most noticeable features in the literary advancement of the United States during the last quarter of a century has been the increase in the number, magnitude, and sphere of usefulness of libraries. From the humblest beginnings, when, in 1820, the Boston and New York Mercantile Library Associations were inaugurated, until the present time, their influence has been steadily extending, and has been fraught with incalculable advantages to the literature and general character of the people. With special significance does this apply to those known as public libraries.

In the full and proper acceptance San Francisco has no public library, and yet, in the history of these great co-educators of our country, she is entitled, through her association libraries, to no little consideration. The Pacific coast has been deemed the *ultima Thule* of the United States, and not a little astonishment was occasioned when rapid and easy communication revealed to the *old* such fruits of progress and advance in the *new*. True it is that literary interests have failed to keep pace with the more material, but yet they have passed successfully through the most materialistic age in the country's existence, and to-day the library associations of the West occupy a position which many similar ones of the Eastern States strove in vain for half a century to obtain.

But many reasons prevail why comparison with like associations of the East should be studied with indulgence. And first stands that of age. The majority of the libraries of the eastern cities were from ten to fifteen years advanced before a similar institution had come to light on these western shores. The oldest library on the Pacific coast has just issued its twenty-third annual report. Again, our libraries have

never received a single important donation, either in money or books, while most of those in the East have been the recipients of liberal gifts in both. Such benefactors as Beck, Cope, Morton, and Roberts to the Philadelphia Mercantile Library; as Grosvenor, McLane, Hunt, and Demilt to the New York Mercantile Library, have not as yet had their counterparts with us. The well known bequest of Dr. Rush of \$1,000,000 to the Philadelphia Library Company; that of the Astors to the Astor Library; and those to the Boston Public Library, almost too numerous to mention, aggregating over \$300,000, together with an endowment fund of over \$100,000, and the rich additions to its collection, by the same means, of the Bowditch, Parker, Ticknor, and Prince Libraries—these combined have hitherto failed to tempt any of California's millionaires to take a similar step for her libraries. There is scarcely a town in the Eastern States of twenty or thirty thousand inhabitants that has not, either by municipal grant or by private generosity, contributed liberally toward making public collections of books. Moreover, while most of the collections above referred to are situated in the great bookmarts of America, and in frequent and easy communication with those of Europe, surrounded by wealthy friends interested in their success, and aiding them by liberal gifts of books and money, ours of the Pacific have been left to struggle alone, and cannot point to a single bequest, save by the hand of some actor, musician, or lecturer; while every one of the thousands of volumes on our shelves in its voyage hither traversed many thousands of miles, and, instead of serving as an eloquent testimonial to the fostering care of a legislature, or the munificence of an Astor, a Cope, a Bates, a Phillips, or a Peabody, is due to the unaided exertions of an association of private citizens.

The principal libraries of San Francisco, and hence of the Pacific coast, (the State library at Sacramento not being here considered,) are those of the Mercantile Library Association, of the Odd Fellows' Association, and of the Mechanics' Institute.

#### MERCANTILE LIBRARY.

First, in point of age, in extent of collection, in importance, and in all that constitutes it the closest approximation to a public institution, should be noticed the Mercantile Library. Dating almost from the foundation of the city, its history is one of a slow but gradual advance against an adverse current, of few encouraging prospects, and not without an occasional struggle for existence itself. The first successful attempt to organize a Mercantile Library Association in San Francisco is recorded as having been made at a meeting held on the evening of the 22d of December, 1852, in the chamber of the board of aldermen. The account relates that "several previous efforts which had been made, from time to time, with a view of forming associations of a kindred character, had been rendered unavailing by a peculiar force of circum-

stances, resulting partly from the unsettled state of society, and the many discouraging reverses which had befallen our whole mercantile community, by reason of the frequent disastrous conflagrations that had repeatedly laid our city in ashes, and thrown a gloomy pall over its brightest hopes of prosperity. But, feeling the importance of such an institution, the young men were not to be defeated in their commendable exertions; and confident of the merits of their cause, and bold in their hopes of success, again renewed the attempt which has happily resulted in the permanent establishment of the present institution." From the minutes we find that "notwithstanding the inclemency of the weather, the meeting was numerously attended, showing that a deep interest was felt among all classes of the community and affording the most flattering encouragement for the permanent success of the movement." The capital stock was fixed at \$50,000, in shares of \$25 each. Subscriptions to the amount of \$2,000 were immediately pledged. A stirring appeal was issued to the public for assistance; a committee was appointed to extend the subscription list, and the amount was rapidly increased to \$5,000. On the evening of January 24, 1853, a meeting was assembled, the final organization effected, the certificate of incorporation adopted, and officers elected for the ensuing year. Mr. David S. Turner was the first president, and effectively served in that capacity for two years. As the nucleus of a library, a collection of 1,500 volumes of standard works, the library of General Hitchcock, was purchased. By means of donations from many of the most earnest supporters of the enterprise of books, from editors of the daily papers of a number of valuable files of our daily journals, the number was increased during the following year to nearly 5,000 volumes. Periodicals, newspapers, and magazines were obtained from the Atlantic States and Europe, and, in a new country like California, where all were sojourners, met with the heartiest appreciation. Suitable rooms were procured in the California Exchange building, then on the corner of Clay and Kearney streets, and on March 1, 1854, with these resources, and under these auspices, the institution commenced its career of usefulness.

To look back from the vantage ground afforded by the present, and note the constant progress it has made, it would seem that its success was insured from the start, but it has not been without great effort on the part of its stanch supporters and its efficient boards of management. Several periods are still fresh in its history during which its existence was almost despaired of. However, prosperity followed it, and at three several times it was compelled to seek more commodious quarters to accommodate its rapidly increasing treasures. The more clearly to show what constant and rapid growth has attended its early history, the following table of statistics may be offered.

## NUMBER OF VOLUMES AT THE BEGINNING OF EACH YEAR.

| Year.     | No. of volumes. | Year.     | No. of volumes. |
|-----------|-----------------|-----------|-----------------|
| 1853..... | 1,500           | 1865..... | 18,095          |
| 1854..... | 2,705           | 1866..... | 19,711          |
| 1855..... | 3,315           | 1867..... | 21,557          |
| 1856..... | 3,833           | 1868..... | 24,020          |
| 1857..... | 6,135           | 1869..... | 25,745          |
| 1858..... | 8,447           | 1870..... | 28,110          |
| 1859..... | 10,066          | 1871..... | 30,002          |
| 1860..... | 11,485          | 1872..... | 30,006          |
| 1861..... | 13,821          | 1873..... | 33,614          |
| 1862..... | 14,985          | 1874..... | 36,356          |
| 1863..... | 15,906          | 1875..... | 39,148          |
| 1864..... | 16,620          |           |                 |

## NUMBER OF MEMBERS AT THE BEGINNING OF EACH YEAR.

| Year.     | No. of members. | Year.     | No. of members. |
|-----------|-----------------|-----------|-----------------|
| 1854..... | 392             | 1865..... | 1,650           |
| 1855..... | 552             | 1866..... | 2,198           |
| 1856..... | 550             | 1867..... | 1,708           |
| 1857..... | 1,250           | 1868..... | 1,818           |
| 1858..... | 1,176           | 1869..... | 1,870           |
| 1859..... | 1,319           | 1870..... | 1,984           |
| 1860..... | 1,817           | 1871..... | 2,020           |

Few libraries, indeed, are so little indebted to the beneficence of able and generous donors for their prosperity and usefulness as the Mercantile Library of San Francisco. Donations of books in any number it has never known. Gifts of money from the close grasp of millionaires have never fallen to its share. The association should then congratulate itself upon its exceptional and permanent advance and the high and solid position it holds to-day. Compared with the growth of

<sup>1</sup> This apparent decrease of circulation is due to a change in the system of keeping the records.

other kindred institutions for the first twenty years, as shown in the following table, there is no slight occasion for surprise and gratification :

|   | Volumes. |
|---|----------|
| Boston Mercantile Library, founded in 1820, contained in 1860 .....       | 19,000   |

| Brooklyn Mercantile Library; founded in 1857, contained in 1860 .....     | 17,500   |

For the first decade of its existence the San Francisco Mercantile exhibits an accumulation of 15,906 volumes, and an increase of circulation from 3,371 to 40,136 a year. At the end of the second decade 33,614 volumes are numbered in its collection, while its circulation has swelled to 84,763. A fit closing of the first decade of its career was its reincorporation, in 1863, under an act of the legislature passed in the early part of the same year, thus annulling its old shares of stock and converting its shareholders into subscribers. The management of the association was vested in a board of trustees, consisting of a president, vice-president, corresponding and recording secretary, treasurer, and nine trustees, to be elected annually. No member was to hold the office of president or vice-president for more than two successive years. The early history of the association may be said to close with the completion and possession of its new library building and the struggle which ensued in recovering from the burdensome indebtedness assumed in its construction. A brief review of the undertaking and its results will not be out of place here, since it was one of the darkest and most hopeless periods in its whole history.

### *Library building.*

In 1865, the project of procuring a lot and erecting thereon a building suitable for the accommodation of the association first began to assume some sensible form, but, indeed, only after years of agitation, discussion, and deliberation. Since 1861, the library had occupied contracted quarters in the old building on the corner of Montgomery and Bush streets, at a constantly increasing rental, and it was apparent to all that an early change to more commodious rooms was fast becoming a necessity. In 1865, by the united efforts of the trustees, the sum of \$20,000 was secured from life memberships and donations. With this amount, increased by an additional sum of \$2,000 applied from the general fund of the association, the board of trustees of the following year, acting upon instructions directly given by a large and enthusiastic meeting of the members, proceeded upon their delicate and difficult task. After great deliberation, a lot was finally chosen on Bush street, midway between Montgomery and Sanson, in the central part of the city. The price to be paid was \$50,000. All the available cash in the treasury of the association, about \$22,000, was de-

voted to the part payment of this purchase price. A loan of \$100,000 was then negotiated, the lot and proposed building being security. From this the balance of the purchase money was paid upon the lot, and the erection of the building commenced. Additional loans were subsequently effected to the amount of \$100,000, the whole bearing interest at the rate of 1 per cent. per month. The building was completed and formally dedicated on the 18th of June, 1868.

In his following report, the president announced that the total indebtedness of the association was \$240,000. This amount had been reached, contrary to the expectation of the board, by reason of obstacles and delays during the construction against which no ordinary ingenuity could provide. It was proposed to reduce it by subscription, as far as possible, and, for the balance, to negotiate bonds of the association, secured on the property, bearing a moderate interest. But these hopes and expectations proved illusory. Bonds for \$100,000 were issued, bearing 9 per cent. interest, but they could not be negotiated. A second series for \$150,000, bearing interest at 8 per cent., was placed upon the market, with a like result. An effort was made to obtain subscriptions, but without success. A course of lectures by distinguished eastern speakers failed to be supported, and assisted even in depleting the treasury. A fair, held in the library hall, met the same fate. To quote from President Swain's report :

Thus matters stood at the commencement of 1869. The prospects were most gloomy. No favoring response came from any quarter. The purpose for which the building had been erected appeared to be a failure. The institution was on the downward road. There was no money to be appropriated to the purchase of new books. It was impossible to obtain a supply even of the cheap current literature of the day. Booksellers had already large unpaid bills, and could not afford to trust any longer. The expenses were increasing with the increase of the debt. No helping hand was extended to save the institution ; appeals to the public pride, public duty, public necessity were fruitless. The French Loan Society, failing to receive their interest, had commenced a suit of foreclosure. The fate of the library appeared sealed. With any other treasurer it would have died at once. The trustees, almost disheartened, discouraged, and disgusted, met night after night for consultation, but they were like meetings of consulting physicians over an expiring patient. It was evident the patient must die. If a decent burial could be vouchsafed, it was as much as the trustees would dare ask of an enlightened and liberal people. But at this crisis, just as the hearts of the trustees were most faint and weary, temporary relief came from an unexpected quarter. Camilla Urso, to whom the association is under a multitude of obligations, proposed a grand musical festival, from which a handsome and very welcome sum was realized.

The festival was, in every respect, a great success, and netted to the association nearly \$20,000. It awakened an interest in the public mind and prepared the way for the consummation of the scheme from which complete deliverance at last came. A bill, which became a law February 20, 1870, was passed by the legislature, authorizing the association to hold three gift concerts, at which articles of value should be distributed, providing the proceeds were devoted to the liquidation of the indebtedness of the association. The entertainments were given, with a

net profit of \$310,120, from which the entire indebtedness of the association was paid, and a balance of \$20,000 turned over to the treasurer.

In June, 1868, the property of the library was transferred to the new quarters, and the building opened to the public. It received from the press generally, as it has since from the many eastern and foreign tourists who have visited it, the highest meed of praise and commendation. It has a frontage on the north side of Bush street of 68½ feet and a depth of 137½ feet. It is three stories in height, with basement and attic. The design of the front elevation is elegant and elaborate, and is in the style known as modern Italian. The entrances are three in number, surmounted by arches; the centre or main one, with a similar one on either side. By these the visitor is introduced into a grand central entrance, on the ground floor, 26 by 60 feet in extent, and 19 feet in height, with a wide central staircase leading to the library and rooms above. On the first floor are placed the library room, ladies' reading room and parlor, the reference room, trustees' room, and what was formerly used for the chess and smoking room.

The second floor comprises the newspaper and magazine room, store room, and chess room. The attic rooms are designed for offices, artists' studios, etc. There are two stores on the ground floor, one on each side of the main entrance, each 18 by 50 feet, while in the basement is the lecture room, 58 by 74 feet in area, and 24 feet high. Connected with this are a supper room, ladies' and gentlemen's dressing rooms, and waiting rooms. The library room proper is reached by two entrances, one upon each side of the vestibule. This apartment is 52 by 64 feet in extent, and occupies the entire frontage of the building. The books are arranged upon the east and west walls in cases projecting from the spaces between the windows. The librarian's desk is conveniently placed near and between the two entrances, and is enclosed by a massive railing in the form of a semicircle. The vestibule is lighted from the library by a large plate window, in the centre of which is placed a double-faced clock dial, so that the hour can be observed from either side, while the works of the clock are in a glass case within the inclosure of the librarian's desk. Directly over the library room, of similar dimensions, and on the third floor, is the reading room. It is furnished with convenient stands for newspapers, which are displayed thereon and neatly secured by an ingeniously devised file invented by the former janitor of the building. For convenience of reference, the different papers are geographically arranged by countries, States, etc., the desks lettered, and a register posted near the entrance to direct one, without delay, to the desired journal. There are 244 newspapers on file, 81 of which are Atlantic or eastern and foreign, while 140 belong to California and the Pacific coast. Tables of a peculiar design, adapted for this use, occupy the front portion of the centre of the room, and contain 115 magazines, of which 68 are foreign and 47 American, together with 21 miscellaneous illustrated journals.

The terms of membership to the association are: life members, \$100; for subscribers: initiation fee, \$2, and quarterly dues, \$3, payable in advance. At the date of the annual report, January 22, 1875, there were 1,643 subscribing members in good standing, 320 life members, and 78 honorary members. The current revenues and expenses, as foreshadowed by the retiring president, for the succeeding year, may be roughly estimated as follows:

Receipts: Dues, \$20,000; initiation fees, \$1,000; rents, \$8,000; other sources, \$1,000; total, \$30,000. Probable expenses, \$20,000; leaving about \$10,000 for the purchase of books.

The collection contains, at present, over 41,000 volumes, which, in approximate numbers, may be distributed through the various departments as follows: Bibliography, 400; belles lettres, 2,000; biography, 2,400; French language, 2,200; German, Spanish, and Italian, 1,300; history, 3,500; collected works, 850; magazines, (bound,) 4,200; poetry and drama, 1,400; public documents, 1,800; romance and juvenile, over 10,000; science, 4,900; theology, 1,250; travels, 2,700; reference, 1,500; duplicates, 600; making in all 41,000.

Although from various causes, but principally from lack of the requisite means, the library cannot be said to have devoted itself to the building up of any special department, and hence is complete in none, it yet offers to the general reader goodly treasures from every mine. It has fortunately acquired a creditable collection of illustrated works of antiquity, architecture, painting, natural history, etc.; material of great cost, and of equally great value. For many years the preservation and binding of magazines and serial publications, as well as the completion of imperfect sets, have received special attention. In the transactions of scientific and learned societies the library has made a good beginning. The association has recently received, as a gift from the British government, a complete set of the Abridgments of British Specifications of Patents, with all continuations.

*Book delivery.*—Previous to 1875, books were delivered in the Mercantile Library by means of two cumbersome registers of 2,500 pages each. This system was attended with great labor and inconvenience, and has been superseded by another and more satisfactory one. It consists of an octagonal cylinder of wood, 3 feet 6 inches in height, and 3 feet in diameter, revolving vertically on its axis. Into each of the eight faces are bored 250 holes, 3 inches in depth and  $\frac{3}{4}$  inch in diameter. The cylinder thus contains 2,000 holes, which, being numbered from 1 to 2,000, supply the place of pages in the old registers. As a hole is allotted to a member, a card of regulated size, and of some distinct color, is placed therein, upon which are written his name, address, and the number of the hole. These cards are permanent, indicating the ownership of the hole, and are uniform in color. When a book is given out a similar card, but of different color, is used, upon which are placed the letter, indicating the department in which

the book belongs, the title, or number, or both, and the number of the hole belonging to the party drawing the book. For convenience, cards can be stamped before the work of delivery begins, and with a little care, in such a manner that the department letter can occupy a small space on the end, distinct by itself. Upon the return of the book the card is taken from the hole, the book identified, and the card dropped into a drawer, where it remains to furnish data for the statistical tables at the end of the month.

As will be observed by reference to the tables already presented, the circulation of the library is between seven and eight thousand volumes a month, the annual average for the past five years being 85,940. This number is exclusive of books used in the rooms for reference and reading, which, by actual count, at various times, proves to be equally great. A table of classification of the circulation for the past year, together with the rate per cent., shows how slight a variation exists in the statistics of the circulating libraries in various sections.

## Circulation for 1874.

|                                | Volumes. | Percent. |                   | Volumes. | Percent. |
|--------------------------------|----------|----------|-------------------|----------|----------|
| Prose fiction and juvenile ... | 63,306   | 74.7     | Spanish .....     | 87       | 0.2      |
| Travels .....                  | 2,996    | 3.4      | French .....      | 2,516    | 2.8      |
| Biography .....                | 2,619    | 3.3      | German .....      | 1,932    | 2.2      |
| Belles lettres .....           | 2,318    | 2.8      | Theology .....    | 558      | 0.7      |
| Science .....                  | 3,498    | 4.2      | Periodicals ..... | 194      | 0.3      |
| History .....                  | 2,062    | 2.2      | Total .....       | 84,763   | 100.0    |
| Poetry and drama .....         | 1,773    | 2.1      |                   |          |          |
| Collected works .....          | 904      | 1.1      |                   |          |          |

As Mr. Poole, the librarian, remarks: "Statistics show that the taste for reading in one community is the same as that of every other community in similar social conditions. Statistics here, (Cincinnati,) in New England, and in Old England show in the main the same results." Doubtless they will not be materially changed by any new development on the Pacific coast. About 75 per cent. of the selections will be prose fiction and juvenile.

For additional interest, the following table is compiled, showing the annual circulation for five years, in the special departments mentioned :

| Year.     | History. | Fiction and juvenile. | Belles lettres. | Biography and travels. |
|-----------|----------|-----------------------|-----------------|------------------------|
| 1870..... | 2,251    | 62,850                | 2,337           | 6,097                  |
| 1871..... | 2,254    | 64,623                | 2,414           | 5,677                  |
| 1872..... | 2,270    | 65,683                | 2,651           | 6,373                  |
| 1873..... | 2,904    | 65,985                | 2,539           | 6,683                  |
| 1874..... | 2,062    | 63,306                | 2,318           | 5,615                  |

As no library is complete without a catalogue, so its history would in so much fail did it make no mention thereof. The association has issued three catalogues. The first was published in 1854, shortly after its organization, and enumerated less than 3,000 volumes; the second followed in 1861, and contained nearly 14,000 volumes; the third and last was completed February 1, 1874, and forms a complete catalogue of over 36,000 volumes. The first two proved of little permanent utility, while the continuation by slips, carried through the subsequent years by various hands, was so utterly lacking in accuracy and uniformity, that the catalogue of 1874 was necessarily the result of a complete re-examination of each individual book in the collection, involving a great expense of time and money. It is prepared upon what is termed the dictionary plan, consisting of an alphabetical arrangement by author, title, and subject, with discretionary subdivisions of the latter, according to its extent and importance. Like the Boston Public Library catalogues, it furnishes complete "contents" of all important works and collections; but it advances one step beyond the point they have yet reached in that it presents them in a purely alphabetical order, by subject, or, as in cases of collected authors, by author, and in very important collections by both author and subject. Without some methodical arrangement, in cases of extended "contents," one's search for an author or article becomes a tedious, not to say fruitless, task. The recent date of its publication, and the small quantity of supplementary slips accumulated, (which are made and arranged in every respect similar to the catalogue itself,) place the library in this respect on a footing equaled by few. The first supplement of 168 pages, and containing 5,000 titles, was issued in 1875. Pamphlets are catalogued as books, but are placed temporarily in pamphlet cases; while the cards, numbered to correspond with the case used, are kept in a separate compartment, distinct from the body of the card catalogue. At convenient seasons the pamphlets are classified as much as possible and bound, the reference on the cards changed, the card inserted in the card catalogue, and the bound volume added to the accession list.

The location of the books upon the shelves is in accordance with the usual system of classification, and an alphabetical arrangement by author is observed in each separate department. The general divisions are themselves subdivided, and the same arrangement by author adhered to. The practicability and advantage of such a system in moderate collections, and in those in which books are accessible to the public, are beyond question; but in a large and growing library, where the difficulties of classification render it perplexing to assign places to the new accessions, and almost impossible to find many of them when once assigned, it becomes imperative to adopt some system more exact and satisfactory. For this reason, the association has determined to number its books, and the only regret is that the step could not have been taken before the construction of the catalogue. In numbering, the divisions of

classification are observed, although the strict alphabetical arrangement therein is somewhat interfered with. This step of numbering the books should lead to another greatly needed and more important, viz, that of denying the public access to the shelves. Every open library suffers from such a license more than its records can ever show. And yet, aside from the unknown but assuredly great loss an open library experiences at the hands of dishonest people, it can be safely claimed that three-fourths at least of the wear and injury sustained by books on the shelves arises from the promiscuous handling of the careless and curious. To a librarian it is disheartening; books belonging in one department are constantly found in some other; they are declared "out," when some careless hand has simply misplaced them; valuable sets, perhaps procured at great pains, are discovered ruined by the loss of a volume, and he despairs in his repeated efforts at reclamation.

Detracting nothing from the flattering account of the new building of the association, reflecting naught upon the credit of those who projected it and bore all the burdens of the long struggle, the fact yet remains, unpleasant as it is, that its location was ill chosen, its construction, in matter of capacity and accommodations, inadequate and unsatisfactory. Situated as it is in the business centre of the city, it is surrounded on all sides by lofty buildings, and is, in consequence, deprived of the primary necessity of a library — light. Moreover, provision should have been made, in the construction of so expensive an edifice, for not less than 100,000 volumes. A library to live must grow, and a growing library requires a large margin for its accessions. Calculations for an increase, at least equal to that of the past, cannot be avoided. During the two decades just past it has been a constant struggle for existence; every dollar expended for books has been the result of great effort, and yet, for each decade, there have been added 15,000 volumes. In twenty years more the number of volumes in the collection should be doubled. San Francisco is rapidly stretching out; what was a few years since "out of town" is now considered "down town." Her population, according to the city directory for 1875, is placed at 230,000. The need of a new location, one more retired; of a building more generously supplied with light, and adequate in every way to the natural growth of the collection, is already a matter of serious consideration with the board of management.

In making up an account of the libraries of San Francisco, so much space and detail have been allotted the Mercantile Library because in its inception and design, in its membership, its functions, its influence, and in the estimation in which it is held by the public, it is, more essentially than any other, the public library of San Francisco. Unfortunately, perhaps, for the material interests of the association, the public contribute freely to its patronage, but poorly to its support. Instead of receiving State or municipal aid and encouragement, the association is called upon for an annual tax of \$2,500 as the price of its usefulness; a thing, I be-

lieve, quite unknown in Europe, and in the older States of this country. Without donations of books, without legislative or municipal aid, in spite of all obstacles which have beset it, in the face of the materialism of a new country, it has possessed itself of a large collection of books, of a fine building, and has made itself acknowledged the educator it really is on the Pacific coast, and now occupies a creditable position among the libraries of the country.

#### ODD FELLOWS' LIBRARY.

The Odd Fellows' Library of San Francisco is an outgrowth of Odd Fellowship, the fruit of the bequest of the late S. H. Parker, a prominent member of the order, and was established in 1854. The library association is a regularly organized and chartered body under the laws of the State, and not merely a representative department of the lodges of the order.

The lodges are almoners of their members' fees, under a solemn contract, signed and sealed by the several lodges of the jurisdiction, which compact may require the coöperation and joint action of both parties to the contract to alter or annul. . . . Each lodge contributing for its members shall have the right of naming one trustee. And any lodge contributing the sum of 50 cents per quarter in advance for each of its members shall thereby entitle each of its members in good standing to membership in the association; but every person, before he is a member, must sign its constitution and by-laws. The board of trustees are not merely lodge representatives. While they are lodge representatives in the association, they are trustees of the association; a separate organization with legal status. Lodge requests will be duly respected, but lodges or a lodge has no moral or legal right to dictate to the trustees of the library association.

As will be seen by its laws and regulations, its sphere of usefulness as a public library is circumscribed, as its membership is restricted, to members of the order; and yet Odd Fellowship has attained so eminent a position, and is represented by so universal a membership in this city and throughout the entire coast, that its library association has become one of the great fountains of public influence, and claims a prominent place in the present notice. The association has succeeded in gathering together a very useful, and, in many respects, a valuable collection of books. The library occupies rather contracted quarters, in a building which is owned by the order, and used principally for the accommodation of the several lodges of which it is composed.

The number of volumes reported in the library in May, 1874, was nearly 25,000. The total number on the accession list at the present writing is but little less than 27,000. The various departments of literature represented in the collection are shown in the following classification, viz :

#### *Classification of collection.*

|                                  | Volumes. |                                   | Volumes. |

As will be seen, selections have been made from every department with moderation, rather than from any special one extensively. As there are many Germans in the order, the German department is very strong. Books are added to the collection at the rate of about 2,500 volumes a year. The number of members entitled to draw books is 3,735. The number classed as contributing members is 100. The receipts from dues are about \$7,000 annually, and the amount expended for books about \$2,500.

The circulation reaches nearly 7,000 volumes a month, or about 80,000 a year. The following table shows the use made of five principal departments for the last five years:

| Year.       | History. | Prose fiction and juveniles. | Essays. | Biography and travels. | Total for year. |
|-------------|----------|------------------------------|---------|------------------------|-----------------|
| 1870 *..... |          |                              |         |                        | 50,985          |
| 1871 .....  | 1,767    | 50,297                       | 2,177   | 1,438                  | 61,763          |
| 1872 .....  | 1,537    | 59,928                       | 2,235   | 1,315                  | 70,629          |
| 1873.....   | 1,793    | 66,211                       | 2,385   | 1,689                  | 79,530          |
| 1874 .....  | 1,823    | 64,509                       | 2,280   | 1,664                  | 78,219          |

\* No classification of circulation this year.

"In regard to the popular taste in reading," remarks the librarian, in his annual report for 1873-'74, "the results shown forth in the statistics of eastern libraries correspond, in the main, to our own. The eastern statistics find the demand for novels ranges from 70 to 75 per cent. Our experience places the figures at from 80 to 85 per cent. With them, such writers as Dickens, Thackeray, George Eliot, Irving, and Hawthorne, acknowledged masters of fiction, take the lead. With us, other authors, like Southworth, Stephens, Holmes, Braddon, and Dupuy, are most popular with the bulk of our readers. But time, the great educator, aided by the powerful influences of the library itself, will, I trust, in the end correct this little aberration, and set us right." Connected with the library room is a well supplied and well patronized reading room, whose files present some sixty newspapers of the city and coast, and twenty-three from the Eastern States and Europe. Forty magazines, American and foreign, can be found on its tables, while on the reference shelves of the library are fifteen valuable sets of society journals transactions reports etc received in bound volumes. Among

these may be mentioned the British Association Reports; the Ethnological Society of London Journals and Transactions; the Geographical Society Journal; the Geological Society Journal; the Linnæan Society Transactions; the Social Science Association Transactions; and the Statistical Society Journal, each a mine of wealth in itself. The library has only a manuscript catalogue, and that of little utility. The president, in his last report, says: "One of the greatest difficulties under which we labor now is the want of a printed catalogue. We hope that this defect will be removed at as early a date as possible." Unfortunately for the comfort and attractiveness of the library, it has little light and less available book room.

#### MECHANICS' INSTITUTE LIBRARY.

The first meeting of the mechanics of the city of San Francisco for the purpose of organizing the association now known as the Mechanics' Institute was held at the office of the city tax collector, in the City Hall, on the evening of December 11, 1854. A committee was appointed to draft a constitution and by laws, and, on the 6th of March, 1855, the same were reported and accepted. As set forth in article 1 of the constitution, the association was to have for its object the establishment of a library, reading room, the collection of a cabinet, scientific apparatus, works of art, etc. On the 29th of the same month a permanent organization was effected, and the first regular board of officers elected, with Benjamin Hayward as president.

Passing over the years of struggle, which, in common with the host of similar institutions, mark its early history, we find it in 1866 in the building on Post street, erected by the institute, and the one occupied at the present day. The lot was purchased for the sum of \$25,000, and the building cost \$45,000. The collection comprised at that time 11,250 volumes. The whole number of volumes in the collection now reaches 24,108, while in the president's last annual report the valuation placed upon the lot and building, in the summing up of the assets of the institute, was \$120,000. The membership roll contains names in good standing to the number of 1,456. The initiation fee for members is \$1, and the quarterly dues \$1.50; life membership, \$50. Memberships are furnished strangers and sojourners at the rate of 50 cents per month without initiation fee. The annual revenue of the library may be estimated at: memberships, dues, etc., \$6,000; rents, etc., \$7,000; total, \$13,000, from which, after deducting current expenses, a balance of \$1,000 or \$1,500 remains to be applied to the purchase of books. The library contains over 6,000 volumes in the department of science and art. As its name would imply, it has directed its efforts in the main to the expansion and perfection of those departments. Its purpose is to build up for the city and the whole coast the best possible collection for reference of works on the practical sciences and mechanical arts. In this view the accessions to the library for the last five years will be of interest.

*Accession list.*

| Year.          | Science and art. | Fiction. | Miscellaneous. | Total. |
|----------------|------------------|----------|----------------|--------|
| 1869-'70 ..... | 626              | 1, 147   | 820            | 2, 593 |
| 1870-'71 ..... | 584              | 687      | 712            | 1, 983 |
| 1871-'72 ..... | 726              | 607      | 583            | 1, 916 |
| 1872-'73 ..... | 246              | 605      | 405            | 1, 256 |
| 1873-'74 ..... | 284              | 605      | 372            | 1, 261 |
| Total.....     | 2, 466           | 3, 651   | 2, 892         | 9, 009 |

From this exhibit we find an average annual addition of 1,800 volumes, of which one-fourth belongs to the department of mechanical science and art.

The circulation of the library reaches nearly 7,000 volumes a month. The actual figures and classification could not be reached, since the librarian has discontinued the record on the ground of the immaterial variation from one year to another, and the substantial correspondence in percentage existing among all similar collections. A classified catalogue of the library was issued in 1867, consisting of 100 pages, and representing nearly 12,000 volumes. It is the only one it has ever had printed, and is probably found to be of limited use at present. It is continued by slips mainly on the same system. It is the intention of the trustees to issue, at an early date, a new catalogue of the works in the reference room of the library.

During the last year the institute has received from the British government a complete set of the British Specifications of Patents, with the continuations. The value of such a set on the Pacific coast cannot be overestimated, and it is a matter of general congratulation that it has fallen to the lot of the Mechanics' Institute, to which it properly belongs, to have it in charge.

The Mechanics' Institute of this city is essentially a representative of the industrial interests of the State. To it belongs the credit of having carried through successfully the only exhibitions of California industry ever given in San Francisco. Since the year 1857 the institute has held nine industrial fairs, and the incalculable benefits accruing to the industrial interests of the State and coast through the extensive exhibitions of home and foreign inventions, applications and productions, reflect the highest credit upon the noble enterprise of the institute and the ability and zeal of its managers. Each year surpasses the preceding in the magnitude of the undertaking, and industrial and financial success.

From the beneficent hand of Mr. James Lick, through whose regal liberality \$2,000,000 have recently been distributed among deserving institutions and for public works in San Francisco and other places, the Mechanics' Institute is favored with a gift of \$10,000 to be devoted to the purchase of works pertaining to the mechanical and scientific arts. This is the first bequest as yet recorded to a library in San Francisco.

## SAN FRANCISCO ART ASSOCIATION LIBRARY.

The library of the San Francisco Art Association, though at present small, is important as forming one of the many humble and promising beginnings which are destined some day to assume a recognized importance among the literary fountains of the coast. The association was organized March 28, 1871, having for its objects the promotion of painting, sculpture, and other kindred arts, the diffusion of a cultivated taste for art in the community at large, and the establishment of an academy or school of design. Its membership is composed of artists and persons interested in the progress of art. Every member is required to pay an admission fee of \$2 and monthly dues of \$1. Life memberships are \$100. There are set apart annually, from the net income of the association, at least \$100 for the purchase of books and periodicals relating to art. The library contains some 280 volumes of standard works of art, including the London Art Journal, Galerie des Peintres Célèbres, Lubke's History of Sculpture, Lacroix's works, etc.

The association is favored with a wealthy, influential, and enthusiastic membership, and will undoubtedly become, in time, the possessor of an art library of great extent and merit.

## LA LIGUE NATIONALE FRANCAISE.

The Ligue nationale française was organized in this city immediately after the signing of the treaty of peace between France and Germany, in 1871.

Its object is to promote friendship, encourage patriotic sentiments among French people, aid in advancing the cause of education not only in California but also in France, and assist in their distress the patriotic emigrants from Alsace and Lorraine.

The league each year offers several prizes of 500 francs for the best written treatise, in a popular point of view, on subjects named by the society. The manuscripts are read by a committee selected for the purpose, and the accepted ones are printed and circulated here and in France (in country districts only) to the extent of from 50,000 to 200,000 gratuitously.

At the monthly meetings political and literary essays are read by a lecturer appointed at a previous meeting, when the subject is given out.

It is the intention of the trustees to open, as soon as the means will permit, a regular afternoon course (free) for ladies learning French, a literary course, and, in addition to this, an evening course free to all foreigners desiring to learn the English language. This course will be strictly devoted to the teaching of the language.

The library, which was begun in 1875, numbers nearly 6,000 volumes, and is accessible to persons of all nationalities.

Aside from those noticed, there are in San Francisco numerous society libraries, but of slight extent and promise, many private collections of creditable proportions, and a promising and growing law library, sup-

ported by a revenue from the courts, and principally available by the legal profession; but in the three described centre the library interests and prospects of the Pacific. Do they promise to supply the increasing demands which are destined to arise here? No; there is a demand for something more general, more generous. There is a lack of unity of interests, of oneness of purpose and desire, evinced in some well meant efforts toward building up for the new West a single grand public depository of books freely accessible to all. The Pacific coast is and will ever remain inconveniently distant from the great library centres of the Atlantic States, and should possess among its own resources one universal library of reference for its students and scholars. A free public library secures the interest of all. Such an one in San Francisco should look to the wants of our entire western domain and to the exigencies of generations to come. Like the Library of Congress for the Atlantic, it should be constituted for the Pacific a storehouse of every publication, not only of California, but of the General Government and of the whole country. It should be financially independent, and above and beyond individual or party caprice.

The materialism of California is wearing away. The day may not be very distant when some one of her many millionaires shall imitate the munificence of great benefactors in the Eastern States, and establish for the Pacific a free public library.

#### OTHER COLLECTIONS.

A list is appended of other public or semi-public libraries in San Francisco, containing each 1,000 volumes or more, further statistics of which will be found in the general table at the end of this volume.—

#### SACRAMENTO LIBRARY ASSOCIATION.

The Library Association of Sacramento dates its organization from October 26, 1857. It can hardly be pronounced prosperous, having no fund to depend upon, and owing, aside from its floating debt, a mortgage of \$6,000 upon its building. The library was built at a cost of

<sup>1</sup> This library is the property of Mr. H. H. Bancroft, author of the *Native Races of the Pacific States of North America*, but may be freely consulted by scholars.

\$17,000, of brick, centrally located, 34 by 80 feet, and is neat and convenient in its appointments. The annual receipts of the association from all regular sources amount to about \$2,000. For the year preceding the report made October 1, 1874, however, they ran up to \$3,863.33. The number of paying members at that date was 144; life members, 34; honorary, 4, and scholarships, 8; making the total number of persons entitled to the privileges of the library 186.

The number of books in the library, at the date mentioned, was 5,539, with barely any increase since. The library also possesses many pamphlets not as yet catalogued or enumerated, but no manuscripts. The rooms are open only from 1 to 5 and 7 to 10 p. m. The circulation of its books amounts to about 5,000 volumes per annum. There are on its files 8 monthlies, 10 illustrated and scientific periodicals, and 20 daily and weekly newspapers. Public interest in the association is needed to give it life and vigor. Its sources of revenue are barely sufficient to meet the necessary current expenses, and outside means are annually resorted to to supply whatever deficiencies may exist.

SAN JOSÉ LIBRARY ASSOCIATION, SAN JOSÉ, CAL.

The Library Association of San José was incorporated July 13, 1872, declaring its object to be the establishment of a library and reading room; the collection of a cabinet, scientific apparatus, works of art; and the general diffusion of knowledge by means of the circulation among its members of the various books, periodicals, and journals published throughout the world. It is under the immediate direction of a board of management, consisting of a president, vice-president, recording secretary, corresponding secretary, secretary, and two trustees.

Its support is derived from three classes of membership, viz: life, annual, and monthly. Any person may become a life member by the payment of \$50. Monthly members pay 50 cents a month, in advance. Annual members are charged \$6 per annum, payable semi-annually, in instalments of \$3. Ten years' consecutive membership constitutes one a life member.

In July, 1874, the following constituted the entire membership of the association, viz: annual members, 188; monthly members, 180; life members, 21; honorary members, 11. Total membership, 400.

The circulation of the library for the year 1874 amounted to 13,118 volumes. The number of volumes in the library in June, 1875, was about 4,000, of which 1,085 were added during the last year. The association has no separate building of its own, but temporarily occupies rooms in the Knox building.

There are found on its files some 40 magazines and illustrated papers, and about 90 newspapers. The library possesses no catalogue of its books as yet, but the librarian is engaged in the preparation of one, and promises its speedy publication.

San José is a considerable city, situated about fifty miles south of San

Francisco, the centre of one of the most lovely and promising valleys (Santa Clara) in the State, and bids fair to possess at no distant day, in its young and flourishing library, a most valuable and useful collection

OREGON STATE LIBRARY, SALEM, OREG.

The State Library of Oregon was founded in 1850, upon an appropriation of \$5,000 made by Congress August 14, 1848. It was totally destroyed by fire December 31, 1855, which accounts, in part, for the present small collection. The legislature furnishes it support in the shape of an annual appropriation of \$750, which is invested by the chief justice. According to the last biennial report of the librarian, the collection contained 6,217 volumes, including 960 pamphlets, the greater portion of which are, naturally, works on law and statistics. There are some 1,400 volumes of reports and digests of the same, and nearly 4,000 volumes of laws, journals, legislative documents, etc. The library is open to the reading public from 9 a. m. to 4 p. m., except during the sessions of the supreme court, which are held in the rooms twice a year, when the public are admitted from 7 a. m. to 9 p. m. The librarian is elected for two years, at an annual salary of \$500. Attached to the report of September 1, 1874, is a catalogue of the library, forming a pamphlet of sixty-four pages.

PORTLAND (OREGON) LIBRARY ASSOCIATION.

The Library Association of Portland was organized in 1864. Beginning in an humble way, through the liberality of a few prominent citizens, it has, by an economic management and careful expenditure of its funds, steadily advanced to its present substantial position. It is managed by a board of ten directors. The first subscription was started in the winter of 1863-'64, and resulted in the realization of \$2,561.50. Two thousand dollars of this amount were immediately invested in books, and the balance appropriated toward the furnishing of suitable rooms. At the end of the first year the association found itself in debt to the amount of \$684.25, which was speedily removed, however, by donations and initiation fees. The membership rapidly increased, and there was in a short time a surplus in the treasury. The association has four classes of membership, viz, life, annual, quarterly, and honorary. Any person can become a life member by the payment of \$200. Yearly members are charged \$25 per annum, and quarterly members \$3 per quarter.

At the end of 1864 the library possessed 500 volumes. It numbers about 7,500 volumes and 150 pamphlets. Its increase in 1874 was 550 volumes, which may be considered its average. The annual circulation of books among its members reaches 15,000 volumes, with the usual percentage in favor of fiction. Its reading room is well supplied with newspapers, periodicals, etc., having some fifty Pacific coast papers, nineteen Atlantic, thirty American magazines and illustrated papers, and twenty English and continental.

## CHAPTER XXXIX.

### GENERAL STATISTICS OF ALL PUBLIC LIBRARIES IN THE UNITED STATES.

---

BY THE EDITORS.

---

#### INTRODUCTION—TABLE—LIST OF LIBRARIANS.

In the subjoined table will be found statistics of all public libraries numbering three hundred volumes or more from which returns were received in 1875-'76, excepting common or district school libraries. Some common school libraries from which returns of the number of volumes were received have been included, but they are too few and unimportant to materially modify the figures given. In the summary below the number of volumes they contain has been deducted from the aggregate number of volumes reported in all the libraries of that class.

In preparing the following table it was found advisable, in most instances, to combine the society libraries of each college, and make but one entry for all; so that the number of libraries is apparently, though not really, reduced from 3,682 to 3,647, a difference of 35.

The chief fault of the table is its incompleteness. The omissions are as follows: 653 libraries do not report the date of organization or foundation; 2,172 do not report the average annual increase of books; 2,940 do not report the extent of yearly use of the library; 1,960 do not report whether they have a permanent fund or not; 2,852 do not report a yearly income from any source; 2,913 do not state the yearly expenditures for books, periodicals, and binding; and 3,039 do not report the amount paid yearly for salaries and incidental expenses. Hence it appears that the only column of the table which is complete throughout is that giving the number of volumes. The totals given below do not include the statistics of eight libraries embraced in the table, from which returns were received after the summary was completed.

The following is a summary of the table:

|  |               |
|--|---------------|
| Total number of volumes.....   | 12, 276, 964  |
| Total yearly additions, (1,510 libraries reporting) .....                                      | 434, 339      |
| Total yearly use of books, (742 libraries reporting).....                                      | 8, 879, 869   |
| Total amount of permanent fund, (1,722 libraries reporting).....                               | \$6, 105, 581 |
| Total amount of yearly income, (830 libraries reporting).....                                  | 1, 398, 756   |
| Total yearly expenditures for books, periodicals, and binding, (769 libraries reporting).....  | 562, 407      |
| Total yearly expenditures for salaries and incidental expenses, (643 libraries reporting)..... | 682, 166      |

Imperfect returns show a little more than 1,500,000 pamphlets in all the libraries.

It will be seen that parish and Sunday school libraries have not been included ; indeed, no systematic effort was made to gather the statistics of such libraries, which are almost as numerous as the churches in the country.

The number of volumes in the other public libraries of the United States is as follows :

|   |              |
|---|--------------|
| Libraries numbering 300 volumes and upwards.....      | 12, 276, 964 |
| District school libraries, not included in above..... | 1, 365, 407  |
| Pamphlets, (imperfectly reported).....                | 1, 500, 000  |

Respecting district school libraries the further remark is necessary that the reports of the State superintendents of California, Connecticut, and New Jersey do not show the number of volumes in the libraries, and therefore the school libraries of those States could not be included in the above total of this class. California has expended for libraries in the last ten years, \$138,564.64 ; Connecticut expended for libraries and apparatus in 1874-'75, the sum of \$7,668.82 ; in New Jersey about thirteen thousand dollars have been expended since 1871 for libraries.

Following the table will be found a list of the names of librarians and other officers furnishing reports. In many cases, as in school and academy libraries, there is no regularly appointed librarian ; in some other instances the name of the librarian was inadvertently omitted from the return.

Table of public libraries numbering 300 volumes and upwards.

NOTE.—Explanation of abbreviations: Acad., Academy; Sch., School; Col., College; Soc'y, College society libraries; Soc'l, Social; Med., Medical; Theol., Theological; Hist'l, Historical; Sci., Scientific; Pub., Public; Mer., Mercantile; Y. M. C. A., Young Men's Christian Association; Gov't, Government; Ter., Territorial; Gar., Garrison; A. & R., Asylum and reformatory; Mis., Miscellaneous; 0 signifies no or none; .... signifies no answer.

| Number. | Place.                    | Name of library.                                  | When founded. | Free or subscription. | Class.    | Number of volumes. | Average yearly additions. | Yearly circulation. | Fund and income.          |                                       | Yearly expenditures.             |                          |
